

Digitally transforming big data streams from urban processes

into holistic

and transparent services,

Sustainability assessment and

management in real time –

for Smart Cities and Communities

Open model of urban area as complex cyber-physical system runs embedded in computing cloud linked with large number of smart everything, IoT, sensors, SCADAs and open data sources.

It enables services for digital economy, international standards of quality of life, citizens and tourists, local businesses, utility service providers, private and public organizations.
