Legal framework conditions in Austria

RTI Strategy 2030

- Defines overall objectives

RTI Pact 2021-23

- RTI Pact to define strategic priorities for three years to operationalise the objectives of RTI strategy 2030
- Promoting EU missions

Research Funding Act 2020

- Identifies 10 central RTI institutions to implement RTI Pact through performance and funding agreements
RTI Pact 2021-2023 on EU missions

- In Horizon Europe, the new European Research Framework Programme 2021 - 2027, missions and partnerships will be of particular strategic importance. Austria will make targeted use of its strengths and set new priorities. The three RTI ministries and the central institutions will **intensify strategic coordination** and coordination in the prioritisation of international priority measures and further develop the international cooperation and mobility programmes. The introduction of missions at the European level will make it necessary to **align national research and research funding activities** with them.
Austrian governance model (under discussion)

**Overall objectives:** building on existing governance structures, respecting legal framework conditions, and establishing lean and efficient structures
Working Group on EU missions (under discussion)

• Possible mandate (*in line with RTI Pact*)
  - Setting-up a *strategic coordination* among RTI ministries and central institutions
  - Aligning national research and research funding activities with EU missions
  - Ensuring an *efficient and effective governance* of EU missions in Austria across STI and sectoral actors

• Possible composition
  - *Co-chaired* by Ministry of Technology/Climate and Ministry of Research
  - *Permanent members*: all relevant sectoral ministries, central RTI institutions
  - *Occasional members*: e.g. universities, universities of applied sciences, sectoral institutions, social partners...
Working Group on EU missions (under discussion)

• Possible tasks

- Analysing already existing activities of the central RTI institutions, the universities and the universities of applied sciences that are potentially relevant for EU missions ("baseline-study")

- Creating a network of RTI and sectoral actors who share a common understanding of the political, regulatory, financial and operational efforts to translate EU missions into societal and economic opportunities for Austria

- Enabling thematic implementation structures along the five EU missions in Austria

- Fostering coherence among Horizon Europe and other EU, national or regional programmes and initiatives (e.g. IPCEIs, Digital Europe, national climate strategy...), also in view of the green and digital transitions of the Austrian society

- Providing strategic intelligence (foresight, monitoring, evaluation know-how from EU, OECD and other sources)

## Opportunities and Challenges

### Opportunities

- Building more responsive and resilient national and EU RTI systems
- Widening the RTI arena for new partnerships and collaborations
- Directing RTI efforts towards green and digital transitions
- Aligning national and European strategies and actions around missions

### Challenges
## Opportunities and Challenges

### Opportunities

- Building more responsive and resilient national and EU RTI systems
- Widening the RTI arena for new partnerships and collaborations
- Directing RTI efforts towards green and digital transitions
- Aligning national and European strategies and actions around missions

### Challenges

- Linking missions with existing sectoral policies and key actors
- Clarifying the relation between the overall national and thematic governance of missions
- Building trust and channels of communication with stakeholders and citizens
- Creating strategic intelligence to inform the governance process
- Offering opportunities for mutual learning among Member States and the Commission
Thank you for your attention!
