TESTA-ng

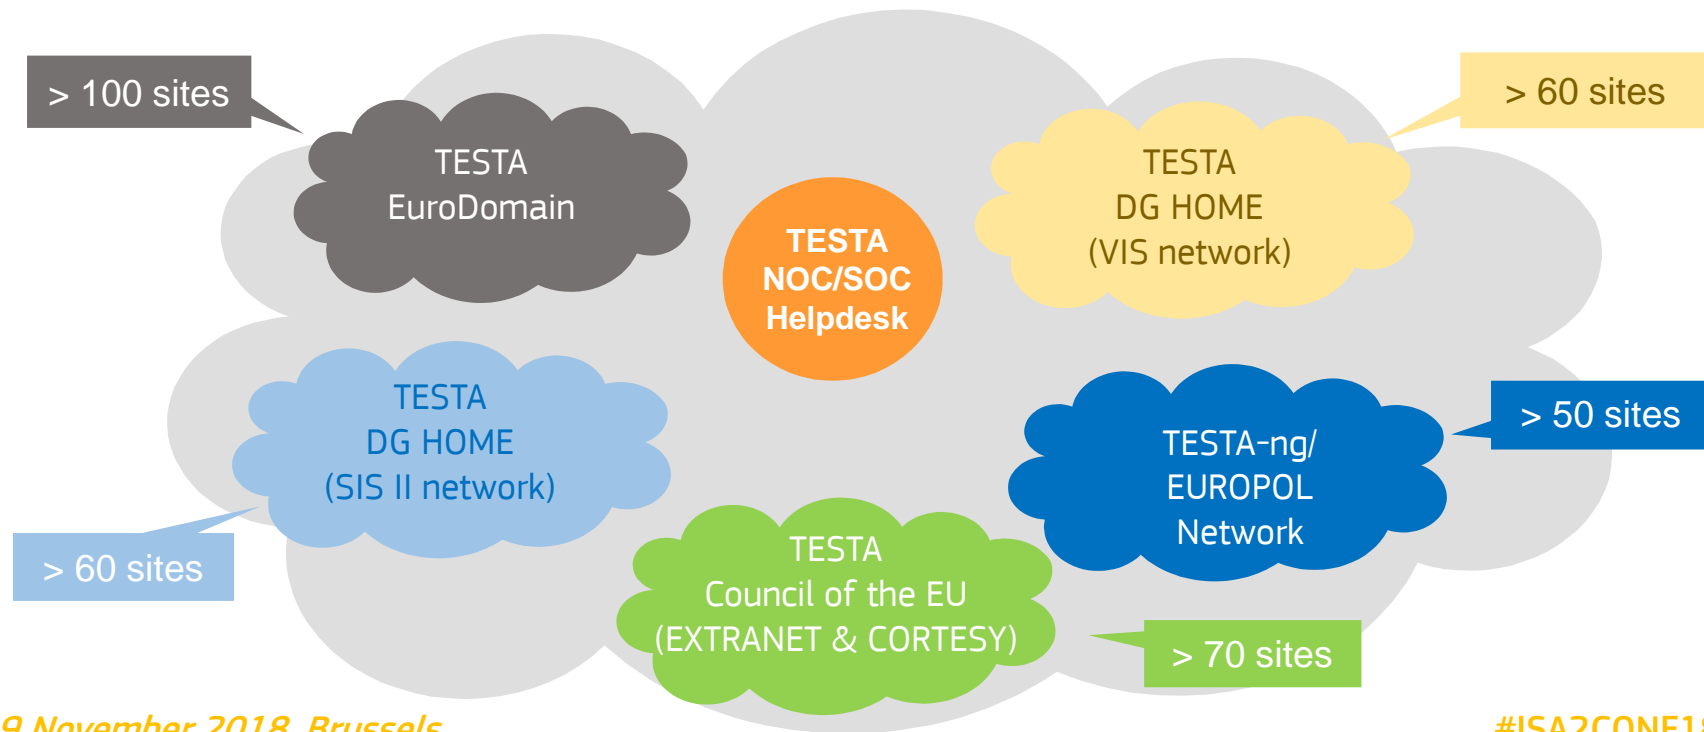

- TESTA (Trans European Services for Telematics between Administrations) is a communication platform to exchange electronic data between European and Member States administrations in a secure, reliable and efficient way.

Who is connected today?

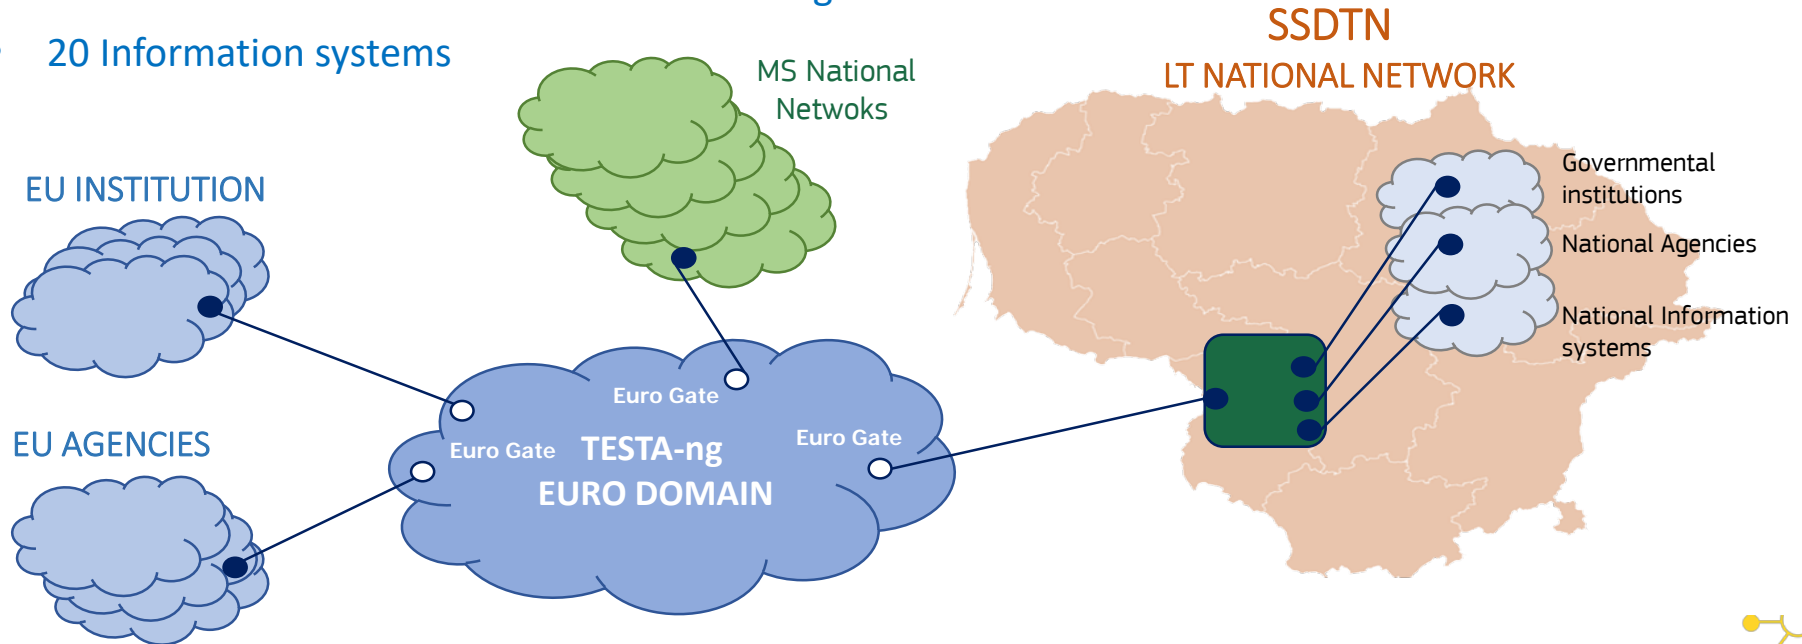

Multiple communities of interests

LITHUANIA is part of the TESTA since 2004

- 18 Governmental institutions and National agencies.
- 20 Information systems

TESTA-ng facilitates the connection of Lithuanian authorities to main European information systems, such as:

1. **Justice and fundamental rights** by providing secured and reliable communication infrastructure to information systems **in the context of Fight against organised crime:**

- European Criminal Records Information Systems (**ECRIS**),
- Cross border Police Cooperation combating terrorism and cross border crime (**Prüm**),
- System of Control of Explosives for the Prevention and Fights against the terrorism (**SCEPYLT**).

2. **Migration** by providing secured and reliable communication infrastructure to information systems **in the context of Asylum:**

- **EURODAC / DUBLINET** for the comparison of finger Prints of asylum applications.

3. **The Internal Market** by providing secured and reliable communication infrastructure to information systems in the context of:

- Money laundering (Financial Intelligence Network (**FIUNET**),
- Free movement of people by supporting the electronic exchange of social security Information (**EESSI**).

What's in it for Lithuania?

- By joining EUCARIS, vehicle related criminal activity has been reduced not by percent, but by several times.
- Fake driver's ID usage declined by more than 3 times.
- EESSI has turned usual 3 months previously needed to exchange data on foreign citizens' profile into couple of hours.

Why all of us should be using TESTA-ng today?

The **TRUSTED** solution for pan-European exchange between administrations **requiring** information **guaranteed service levels** for network **availability, performance** and **security**.

Its infrastructure has been built to be subject to a security accreditation process to allow the exchange of EU classified information up to the "RESTREINT UE" level.

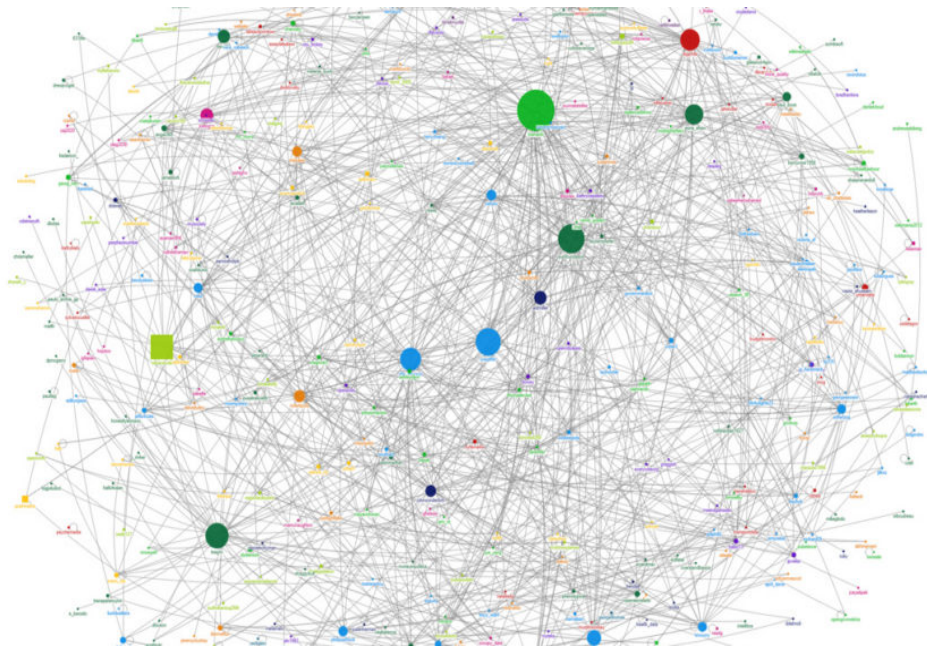

It's **SIMPLE** to use – more than 100 policies projects & services in one platform, single POC.

It's **FAST** to get – Connection to EESSI was established in 1,5 hours

What if the TESTA-ng solution would not be available?...

- A cobweb of different types of connection between hundreds of administrations.
- Variable requirements for security, service levels, troubleshooting – easy to get lost or mistaken, very unsafe and costly in terms of time and money

Lithuania has chosen to be a part TESTA; we used it as model for the national network.

Good things are contagious 😊

Thank you
