Methodology

The study was conducted following a case-study-based methodology. 14 case studies were selected and analysed in detail (interviewing both providers and reusers of LOGD) according to the dimensions of the Business Model Canvas(1). Nine of the case studies came from four EU Member States, namely Austria, Germany, Italy and the UK. Four of the case studies came from the European Union Institutions (i.e. DG for Health and Consumers, the European Environment Agency, the EU Publications Office and Europeana). Finally, one case study from the United Nations was also analysed.

An action supported by ISA

This activity is supported by the European Commission’s ISA programme. ISA stands for interoperability solutions for European Public Administrations.

Why ISA?

Administrative procedures have a reputation for being lengthy, time-consuming and costly. Electronic collaboration between Public administrations can make these procedures quicker, simpler and cheaper for all parties concerned, in particular when transactions need to be done cross-border and/or cross-sector. ISA supports such electronic collaboration. Through its more than 40 actions it provides tools, services and frameworks for the Modernisation of Public administrations in Europe, across e-borders and sectors.
