European Union Location Framework

Delivering savings, growth and better services through “location-enabled government”

**BUSINESS NEED**
Coherent and committed action is needed to remove barriers and realise the potential of location information in European e-government services across all sectors and administrative boundaries. This should be done through a harmonising initiative to guide alignment in policy and implementation and ensure best practices are followed, building on the Infrastructure for Spatial Information in the European Community (INSPIRE). Success will be achieved through effective collaboration and a focus on solving key problems based on user priorities and expectations.

**EULF VISION**
“More effective e-services, savings in time and money, and increased growth and employment will result from adopting a coherent European framework of guidance and actions to foster interoperable cross-sector and cross-border sharing and use of location information”
