What Happened to Forests in Copenhagen?

Abstract:
After the chaotic final days of the Copenhagen climate conference, many saw only fog, i.e., an unclear outcome and much uncertainty on future steps to take. Were the forests lost in this fog or some tree is still visible, possibly suggesting a path to take? This commentary will briefly analyze the outcome of the Copenhagen conference with respect to the main forestry issues under debate: LULUCF (Land Use Land Use Change and Forestry, i.e., mainly forest CO2 removals in industrialized countries) and REDD (Reducing Emissions from Deforestation and forest Degradation in developing countries).
