Who are we?

The Joint Research Centre (JRC) is a department of the European Commission. Our mission is to support EU policies with scientific evidence throughout the entire policy process. We are independent of national, commercial or stakeholder interests.

Our 2 800 staff are based in Belgium, Germany, Spain, Italy and the Netherlands. In addition to performing our own research, we make sense of collective scientific knowledge from multiple sources for smarter EU policies. Capacity building is one of our key roles. We often work in partnerships with universities, government offices, agencies and stakeholders.
Most of our scientific work is undertaken in direct support to EU policies. We add value by providing knowledge or services that others are less well placed to provide. And we strive for excellence in all our activities.

In carrying out our work, integrity is a core value: in our approach to science, in the way we treat people, and in avoiding conflicts of interest. We strive always to deliver on our commitments, to promote an open exchange of knowledge and to foster innovation.

Our scientific work covers a wide range of EU policy domains: energy and transport; sustainability and climate; migration; economic questions; education and employment; food, nutrition and health; digital transformation; and innovation. We endeavour to address new societal challenges as they emerge.

### JRC priorities

#### Securing Finland’s gas supply

The JRC, together with Finnish gas grid operators, assessed risks to the security of the country’s gas supply. On the basis of this, and as outlined in European legislation, the first regional risk assessment of gas supply in Europe, joint preventive and emergency measures can now be taken to ensure a stable supply of gas, even in the case of a crisis.

#### What makes an innovation ecosystem successful?

In a study on the role of entrepreneurial universities in the EU, the JRC identified key success factors in innovation ecosystems. In this context, the JRC conducted a study, ‘Place-based Innovation Ecosystems: the case of Aalto’ to support strengthening existing and emerging new place-based innovation ecosystems in EU regions and cities.

#### Fighting forest fires, the high-tech way

The JRC operates the European Forest Fire Information System through which it works closely with national authorities, including those of Finland. More specifically, forest fires are monitored by satellites allowing the JRC to produce maps outlining the extent of the blaze. Targeted efforts can then be made to fight the fires and minimise negative effects.
Since 2017 the JRC has opened up 12 of its physical research infrastructures to academia, research organisations and industry (including small and medium enterprises). Scientists will have the opportunity to work in JRC laboratories dedicated to nuclear safety and security, chemistry, life sciences, physical sciences, ICT, and ‘foresight’ (the branch of scientific research that explores how the future will look).

**SMART SPECIALISATION**

The JRC hosts the Smart Specialisation Platform, which helps European countries and regions identify which research and innovation areas to invest in. The Platform takes into account a country or region’s existing strengths and upcoming challenges. We have provided science-based advice for policymakers, businesses and research institutions. And we have developed more than one hundred Smart Specialisation Strategies for various European regions and Member States, e.g. for the agri-food and energy sectors. The Platform has helped foster many partnerships both within the EU and beyond.

**KNOWLEDGE CENTRES AND COMPETENCE CENTRES**

The JRC hosts several Commission Knowledge Centres and Competence Centres. These Centres bring together experts, stakeholders and knowledge from both within and outside the European Commission. Knowledge Centres are built around topics, while Competence Centres focus on analytical tools. Together, they inform policymakers, stakeholders and the general public about the latest scientific findings that are relevant for policy. They provide contextualised evidence, reviews, data analysis and data visualisation.

**SUPPORT FOR STANDARDISATION**

Standardisation and harmonisation promote innovation and competitiveness. They also build consumer trust and are essential for the European single market. For these reasons, more than 70 % of the JRC’s projects involve work on standardisation and harmonisation. The JRC also participates in more than 160 technical committees linked to standardisation organisations. The JRC also plays a key role in the development of reference materials. The JRC carries out research to lay the scientific foundations before a standard is adopted, for example, by developing analytical methods.

**BRIDGING THE GAP BETWEEN SCIENTISTS AND POLICYMAKERS**

The JRC regularly organises or facilitates events known as ‘Science meets Regions’ and ‘Science meets Parliaments’. At these events, scientists and policymakers are brought together to learn about each other’s challenges, tackle issues specific to a given region or country, build relationships and promote a culture of evidence-based policymaking.

**ACCESSING OUR DATABASES AND MODELS**

In line with our values of openness and transparency, we grant access to the JRC’s services, databases and tools, including more than 100 models.

**COLLABORATIVE DOCTORAL PARTNERSHIPS**

In 2017, the JRC launched the Collaborative Doctoral Partnerships programme to work with universities to better understand what type of research is needed at different phases in the policy process. It places a special emphasis on the science-policy interface, including communication.
The main fields of cooperation between the JRC and partners in Finland are innovation ecosystems; gas supply security; environmental protection and monitoring; land-use and forest management; bio-economy; artificial intelligence; data and knowledge management.

The Finnish Member of the JRC Board of Governors is Antti Vasara, of VTT Technical Research Centre of Finland.
