Food Fraud Cases

Iberian pigs are fed with acorns during October-March, thus contributing to the distinct characteristics of Iberian ham (pata negra). It is estimated that, the low acorns harvest over the past years of 2016/2017 would be adequate to feed only 500,000 pigs, or even less. Nevertheless, the season 2016/2017 witnessed the registration of more than 700,000 Iberian pigs. This raised the question of potential fraud taking place in the sector.

Italian authorities have seized 25 tons of cod that did not fulfil the legal traceability requirements.

Genova24: 08/03/19

Italian authorities have seized 9000 tons of crushed grapes that were set aside for producing Aceto di Modena, a PDO product that can only be produced with seven grape varieties sourced in certain areas of Italy. The seized grapes did not fulfil those requirements. The low grape production rate last year in Italy could have caused the problem.

The Guardian: 09/03/19

Indian police have seized tea intended to counterfeit some reputed brands.

Business Standard: 12/03/19

A survey conducted in Ciudad de México, Cancún and Mazatlán (Mexico) showed that 95% of fish declared as Marlin were, in fact, different species.

La Silla Rota: 12/03/19
Argentinian authorities have restricted the commercialisation of milk powder of a specific brand because of its lack of the fat and protein levels required by legislation. Also, the labels were manipulated to unduly extend the expiry date, and the indicated registration number of the production plant was faked.

**Crónica**: 14/03/19

Italian Carabinieri dismantled a criminal organisation that counterfeited trademarks and labels of a famous winery in Florence during a raid carried out under the auspices of Europol. The labels were intended to be used on bottles containing low quality wine, which were foreseen to be exported.

Brazilian authorities have trialled a company for marketing adulterated cheese, prepared with products not apt for human consumption. Samples were mislabelled, proper sanitary conditions were not respected, and extraneous substances such as water and starch were added during production.

**Ministério Público**: 19/03/19

Police have arrested two people for selling adulterated saffron.

**Rising Kashmir**: 20/03/19

Pakistani authorities have seized 1000 kg dyed bran in a spice company. It is a regular occurrence to find wheat husk intended to be added to spices. Within a year, two tons of bran has been seized in installations associated with spices production.

**The News**: 20/03/19

Indian authorities have found a truck that transported tea waste to a company producing tea. The tea waste was apparently intended to be mixed with green tea. In India, it is forbidden to use tea waste for any other purpose than for the production of fertilisers.

**The Times of India**: 23/03/19

Spanish Guardia Civil dismantled a production plant where saffron was adulterated. Genuine saffron was mixed with parts of the plant not considered as food, as well as with extracts from other plants and chemical reagents. In total, 87 kg of adulterated saffron has been seized.

18/03/2019 – Substitution affects only 1 % of the Eco-labelled fish.

A study carried out by the Marine Stewardship Council (MSC) showed that only 1 % of the fish sold under the "Eco" label was misdescribed. Out of 1400 samples analysed, only 13 were of a species that were different from the one indicated on the label. Only 2 of the 13 presented a clear case of fraud. This shows that the strict controls implemented in the "Eco" sector serve to eliminate fraud. The equivalent substitution record in the non-Eco sector is about 30%.

**Undercurrent News**

21/03/2019 – Italy introduces strict traceability rules for goat and sheep milk.

In Italy, goat and sheep milk will have to fulfil strict traceability requirements. The first business operator will be responsible for registering monthly the origin (Italy, from the EU and third countries) of all the raw milk purchased.
