Food Fraud Cases

04/07/18 - Fraud in the organic food sector

The Italian authorities responsible for the anti-fraud fight in the food sector conducted controls to detect fraud in the organic food sector. In the frame of these dedicated controls that started in March 2018, 100 tons of different food commodities were seized. The most common cases of fraudulent practices included the replacement of labels to extend their expiry dates, substitution of organic products by conventionally produced products, lack of hygiene and traceability of the products.

L'Ora

09/07/18 - Sodium metabisulfite added to fresh meat

Investigations have revealed that some butchers treated meat with sodium metabisulfite to give it a red colour that lasts for weeks. This chemical can induce allergic reactions to consumers who are sensitive to sulfites.

Tuko

09/07/18 - Spanish wine sold as French rosé

An extensive investigation carried out by French authorities during the period, 2016-2017 demonstrated that thousands of litres of Spanish wine were sold in France as French rosé.

economie.gouv.fr

10/07/18 - Attempts to sell expired frozen food

The Italian police have seized sixteen tonnes of expired frozen food from a large distribution centre. Food that was rotten and in some cases, by several years past the expiry date was relabelled and intended to be offered for sale.

Ansa
10/07/18 – More than 10000 expired hams seized

The Spanish Guardia has found more than 10000 expired hams in rented containers which were relabelled to extend their expiry date. Some of the hams were already rotting.

Ideal

20/07/18 - Warning about the presence of melamine or its analogues in chocolate product

The US Food and Drug Administration published an import alert about the presence of melamine or its analogues in chocolate products produced by a manufacturer in China. This is the first time that such a warning is published since 2010 when melamine was added to the baby formula that caused the death of several babies.

23/07/18 – Guardia Civil dismantles a network that sold cheap wine as high-end products

The Spanish Guardia Civil dismantled a network that sold cheap wine (normally priced 19 €/bottle) for prices as high as 1900 €/bottle. The cheap wine was rebottled and rebranded as Pingus and Flor the Pingus, some of the most expensive Spanish wines. Also, Vega Sicilia Unico was counterfeited although in this case, the wine rebottled was a Vega Sicilia Quinta Valbuena, whose price is about 100 €/bottle, but was sold for 1400 €/bottle. The network even organised wine tastings to identify the wines that tasted like the authentic products, which was then used as a substitute.

El Diario Vasco

27/07/18 - 400 kilos of rotten fish ready to be sold

The Italian authorities have seized four hundred kilos of decomposed fish from a fish shop for not fulfilling the hygienic conditions required by law.

Quotidiano

28/07/18 - Four tons of rotten meat seized

Portuguese police have seized four tons of rotten meat stored under conditions that did not fulfil the legislated hygiene requirements.

Portugal

30/07/18 - Evidence of honey fraud

Analysis carried out on South African honey by request of the South African Bee Industry Organisation, demonstrated that a honey producer in South Africa was selling a product high in sugars and not synthesized by bees. The producer was accused of preparing a concentrated sugar solution to which lemon was added and selling it as honey. The accused producer refuted the allegation but acknowledged feeding sugar to his bees. A well-known company selling honey in South Africa recalled from the stores their product labelled as “Natural Honey” after the fraud was made public.

Times Live
31/07/18 - 160 tons of fish seized

Police in Italy has withdrawn 160 tons of fish from the Italian market. Part of the fish was intended to be sold as fresh, but was, in fact, rotten. The rest of the stock came from Asia but labelled as Italian.

Strill.it

31/07/18 - Endangered Spanish eel species smuggled into Japan via China

According to Europol, about 100 tons of European juvenile eel (protected by the Convention on International Trade in Endangered Species of Wild Fauna and Flora) were smuggled into China between autumn and spring. Six months later, the eels were exported to Japan. However, Japan’s Fisheries Agency refuted the allegation that Japanese supermarkets were selling European eels since it is difficult to trace the geographical origin of processed fish in the market. The Spanish police have detained several Spanish and Chinese citizens involved in this fraudulent activity.

East Asia

01/08/18 – Many popular foods are at risk of fraud

As much as 99% of wasabi and nearly 100% of grated parmesan sold seems to be fraudulently manipulated being on the US market. Other commodities frequently affected are lobster, Kobe beef, red snapper, olive oil and honey.

22/08/18 – An illegal company accused of producing paneer with sulphuric acid

India
An illegal factory has been sealed, and more than 2000 kg of paneer (Indian fresh cheese speciality) seized for fear that it was produced with sulphuric acid. The factory was run without an appropriate licence and did not respect the required hygienic conditions, using material that was contaminated with fungi. Skimmed milk, butter and other dairy products were also seized.

The Times of India
22/08/18 - More than 400 kg of vegetables, fish and meat seized from a wholesaler for lack of labels and traceability information
The Italian police have seized more than 400 kg of vegetables, meat and fish for mislabelling and lack of traceability documents after a raid at a wholesaler. For some products, the labels were not in Italian.

Cronache Maceratesi

28/08/18 - About 44 % of seafood wrongly labelled
According to a report published by Oceana Canada, about 44 % of fish samples taken in Vancouver, Victoria, Toronto, Ottawa and Halifax were wrongly labelled. Forty per cent of the mislabelling concerned cheap species such as scolar tilapia, and Japanese amberjack. Scolar and Japanese amberjack may trigger undesirable health effects. About 55 % of the mislabelling was found in restaurants against 22 % with retailers.

31/07/18 - Some Italian fishing zones closed for weeks
Some fishing zones in Italy will be closed for fishing activities in the next weeks. This can increase the risk of fraud due to the decreased availability of some fish species.

Il Salvagente

01/08/2018 - The Food Safety and Standards Authority of India issues guidance note on how to avoid ground spices fraud
The Food Safety and Standards Authority of India (FSSAI) published a guidance note on how to avoid purchasing spices that may have been fraudulently manipulated. FSSAI recommends the buying of whole spices instead of powdered spices. Ground spices can be adulterated with chalk powder, artificial colourants and starch and can induce allergic reactions and health problems. Information is also provided on how to identify fraud in loose powders at home. The guidance also stresses that powdered spices can only be offered in packaged form and not sold loose.

02/08/2018 - The US Seafood Import Monitoring Programme establishes new rules for some fish species
The US Seafood Import Monitoring Programme has put in place new rules for the import of thirteen species: Abalone, Atlantic cod, blue crab (Atlantic), dolphin fish (Mahi Mahi), grouper, king crab (red), Pacific cod, red snapper, sea cucumber, shark, shrimp, swordfish, and tuna. Training courses on the new rules are organised for some of the main exporters of the mentioned species to the USA. [VietNam News]

08/08/2018 - Brazil implements traceability requirements for fruits, vegetables and aromatic herbs
Brazil has started implementing traceability requirements for fruits, vegetables and aromatic herbs. The registry must contain information of the address of the producer, name, variety, lot, date of production, distributor, etc. The legislation will be implemented in three different steps, each one of them covering different types of fruits and vegetables. [Agencia Brasil]

16/08/2018 - Fast detection of fraudulent coconut water
The demand for coconut water has increased because of its publicised health benefits. In parallel, fraud cases have also increased. The addition of water, sugars not originating from coconut and dairy products (causing some anaphylactic reactions to people allergic to dairy products) are the most common types of fraud. An analytical method based on the use of a hand-held device has been developed and can now be used for the rapid detection of fraud. [Securing industry]

22/08/2018 - The Food Safety and Standards Authority in India issues standards for honey and its products
The Indian Food Safety and Standards Authority have introduced standards for honey and bee products (such as wax and royal jelly) to control fraud in the sector. Eighteen parameters are being regulated, among others the amount of sucrose, pollen counts, glucose ratio, etc. [First Post]

25/08/2018 - Origin labelling of tomato-derived products now mandatory in Italy
From 27th August, Italian legislation requires that products derived from tomato and containing more than 50 % tomato must indicate the country of origin of the tomato and the country where the product was processed. Tomato-derived products are the third ones, after pasta and rice, for which the geographical origin has to be given. [Giornale di Sicilia]
