About the Instrument for Pre-accession Assistance (IPA)

Pre-accession assistance is an investment in the future of the EU, making Europe safer and more prosperous by supporting the stability and prosperity of our closest neighbours. IPA creates incentives for EU future members to work on the transformation of their societies, legal systems and economies.

IPA 2007–2013

With over EUR 11 billion of funding committed from 2007 to 2013, IPA has already contributed significantly to reforms in the enlargement countries. At the same time, the funds help the EU reach its own objectives for a sustainable economic recovery, the environment and climate change, transport, and energy supply etc.

IPA II 2014–2020

IPA continues the process in order to:

- Increase good governance and capacity building to align with EU laws and standards;
- Support socio-economic development in line with the EU 2020 targets for smart, sustainable and inclusive growth.

Where do we stand?

Croatia is the most recent Member State, having joined the European Union in 2013.

The countries are at different stages of the process. Before joining, they must meet all political and economic conditions and align their legislation with EU law.

Agriculture
and rural development

The Common Agricultural Policy of the EU aims at ensuring a fair standard of living for farmers and providing a stable and safe food supply at affordable prices for consumers. Producing good-quality products should go hand-in-hand with meeting high environmental and animal welfare standards. Farmers are supported in using sustainable farming methods. They are also encouraged to produce and market the food specialities of their region.

An investment in agriculture and rural development

Agriculture is one of the most complex and sensitive issues in the enlargement countries. This is evident in its relatively large share of the Gross Domestic Product and the high percentage of the population active in agriculture. There are also structural deficiencies within the sector.

The Instrument for Pre-accession Assistance (IPA) provides assistance towards restructuring agriculture and adapting it to EU standards. It contributes to sustainable rural development. Its final goal is to help a smooth integration of the agricultural sectors of the enlargement countries to that of the EU, to the benefit of both farmers and consumers.

Higher quality of products

This project provided equipment to be used by a network of 2,165 members, educational workshops and venues for exchanging experiences. The initiative produced positive results, which are visible in the higher added value of certified products, increased competitiveness of the sub-sector of medicinal and aromatic plants and the higher profits of the network members and their cooperation partners. The networking also solved the problem of the lack of equipment for the project beneficiaries. Transferring this kind of best practice is already applied in the Sisak Moslavina County of the neighbouring country Croatia.

Western Balkans –
Sustainable farming methods

In the Bar and Boka-Bay area in Montenegro and Dubrovnik Neretva County in Croatia, olive production and processing were improved and made more competitive, resulting in more economic opportunities and local employment possibilities. This project was implemented by six local partners, including associations of olive producers, and was highly successful in developing the agrotourism sector in this cross-border region. Promotion and marketing focused on niche markets for nature and authentic local products.

The former Yugoslav Republic of Macedonia – Providing a stable and safe food supply

The support the EU provided to the country’s Food and Veterinary Agency focused on the inspection services, control of animal diseases, animal waste disposal and an animal identification and registration system. Some of the key results are: improvements in the rabies diagnostic capacity; preparation of an animal by-products strategy and a solution for the safe disposal of animal origin waste; and the establishment of an adequate monitoring and reporting system on animal diseases in the country.
