Cyber-Physical Systems

The On-Going Revolution

CPS is considered to be **the next revolution in ICT** with lots of game-changing business potential and **novel business models for integrated services and products** (www.cyphers.eu):

- **core enabling technology for securing economic leadership** in embedded systems/ICT
- with enormous social and economic importance with **decisive contributions to societal challenges**
- such as the aging population, climate change, health, safety, the switch to renewable energy, megacities, limited resources, sustainability, globalization, and mobility.

Many European technology leaders are already in the midst of a **global race of repositioning and reinventing** themselves by developing novel, CPS-inspired business models
