

SERVERLESS

The optimal usage of cloud resources

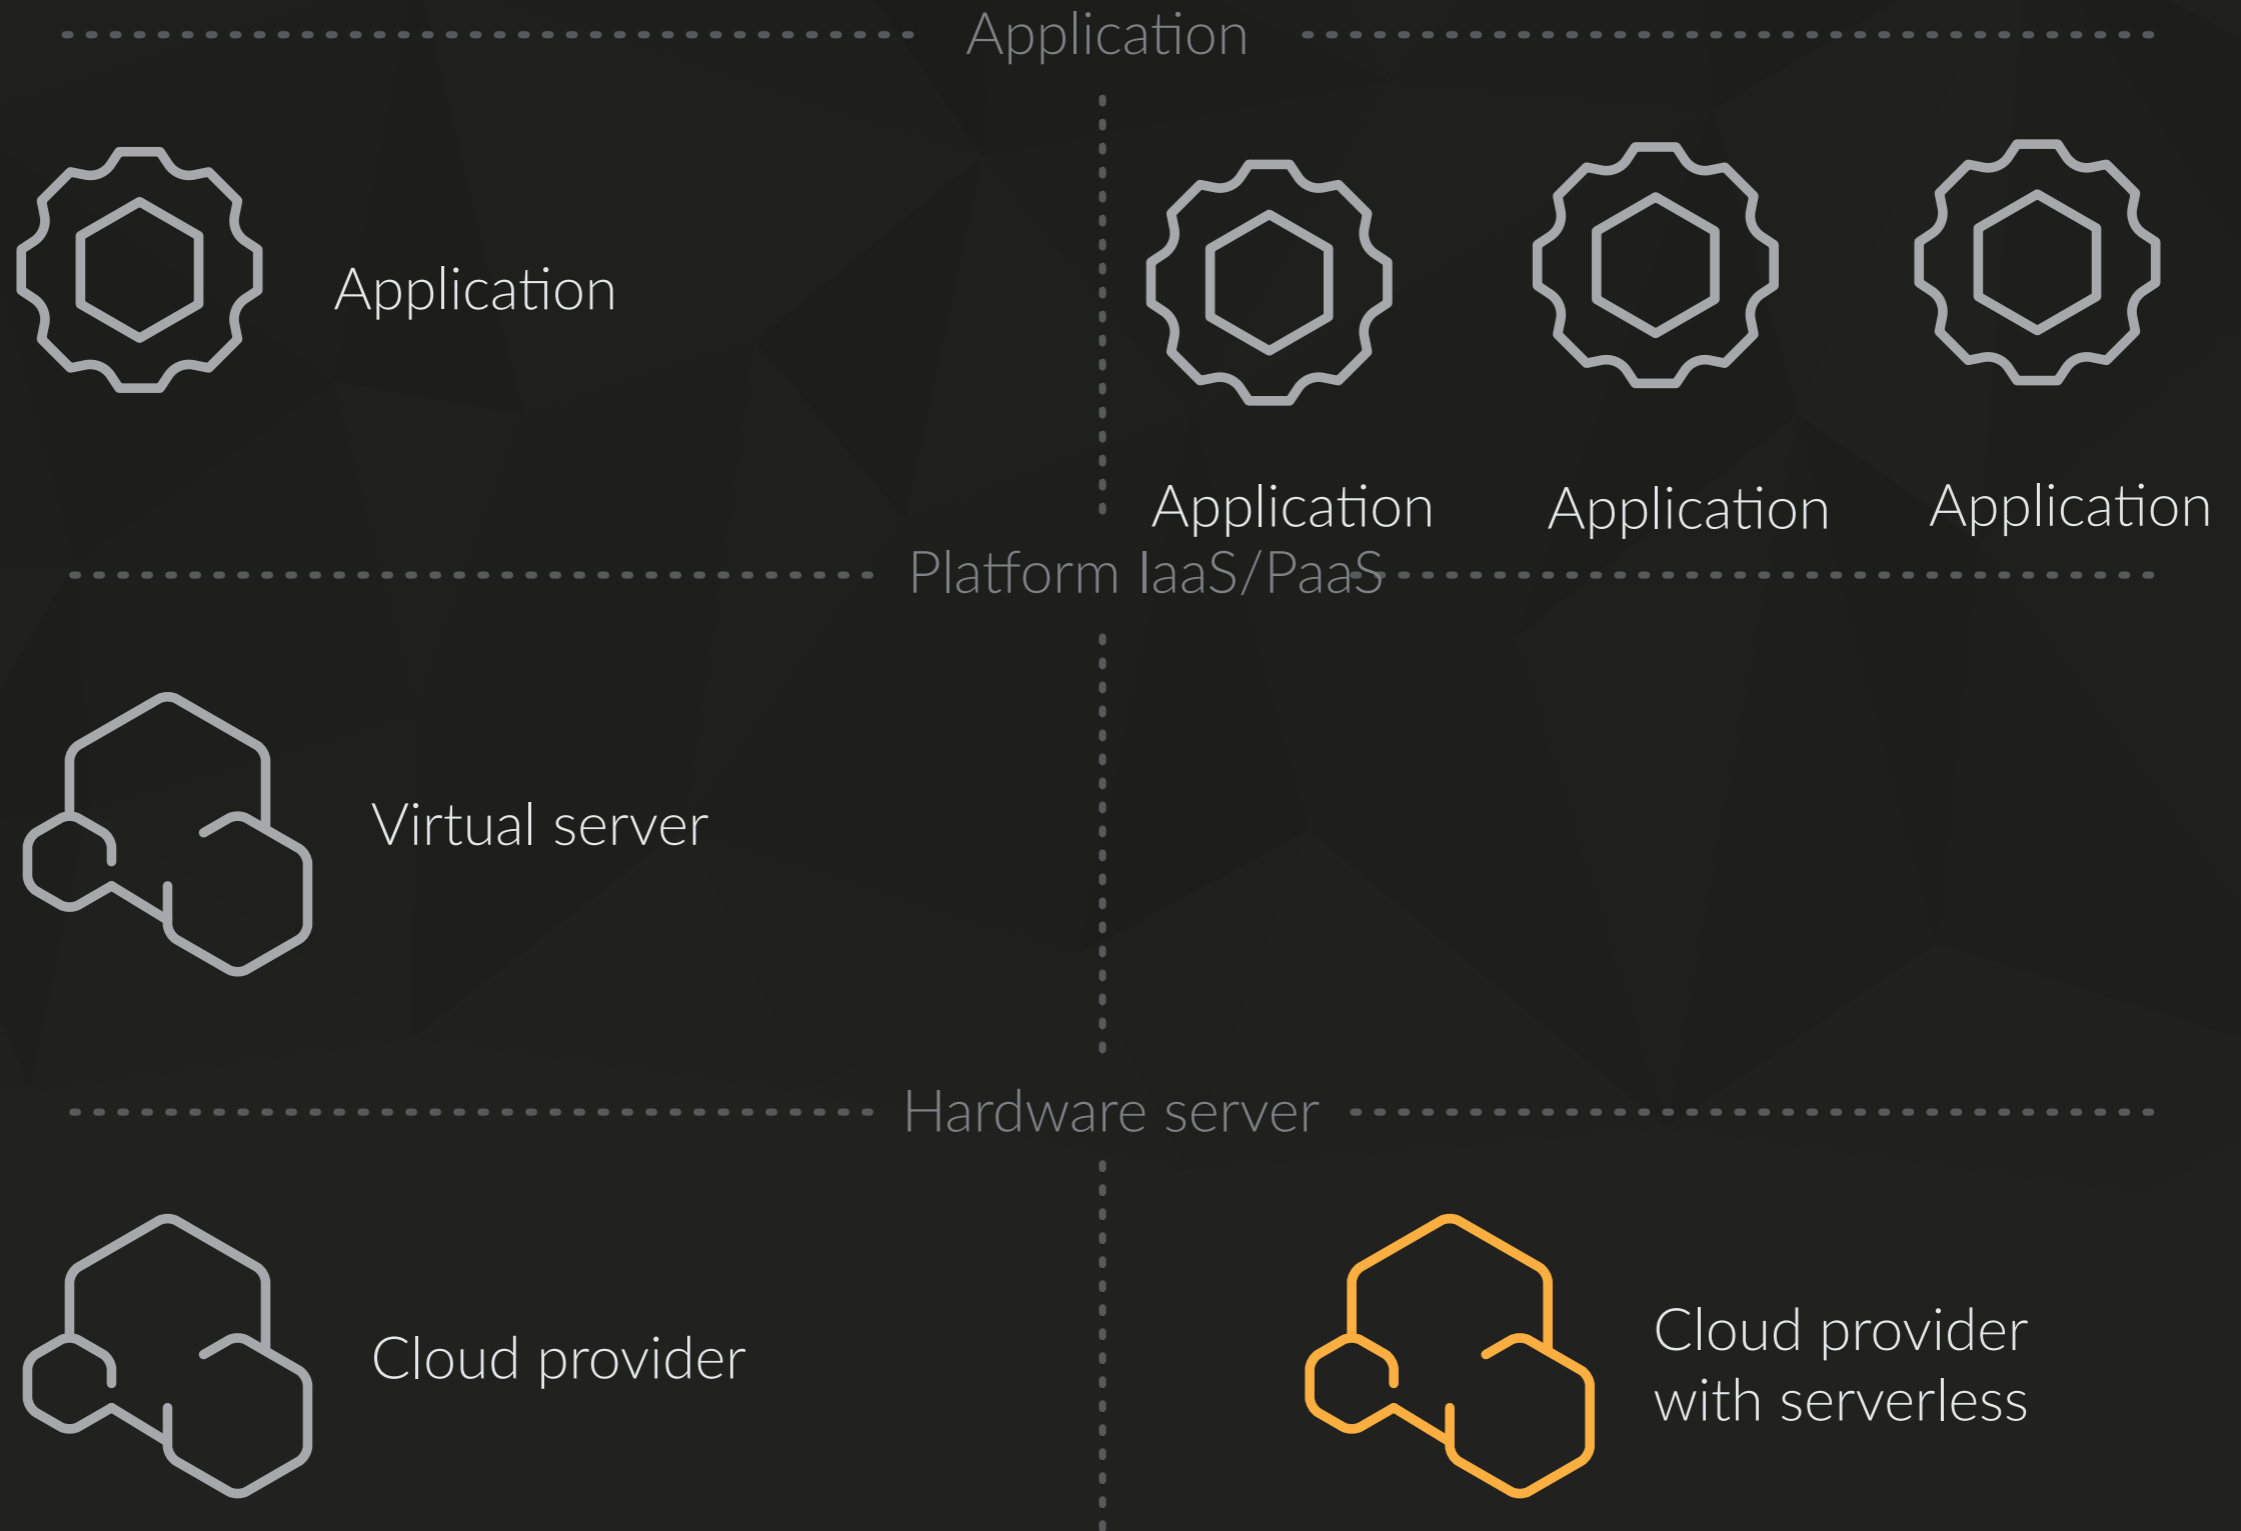

Serverless Cloud Computing

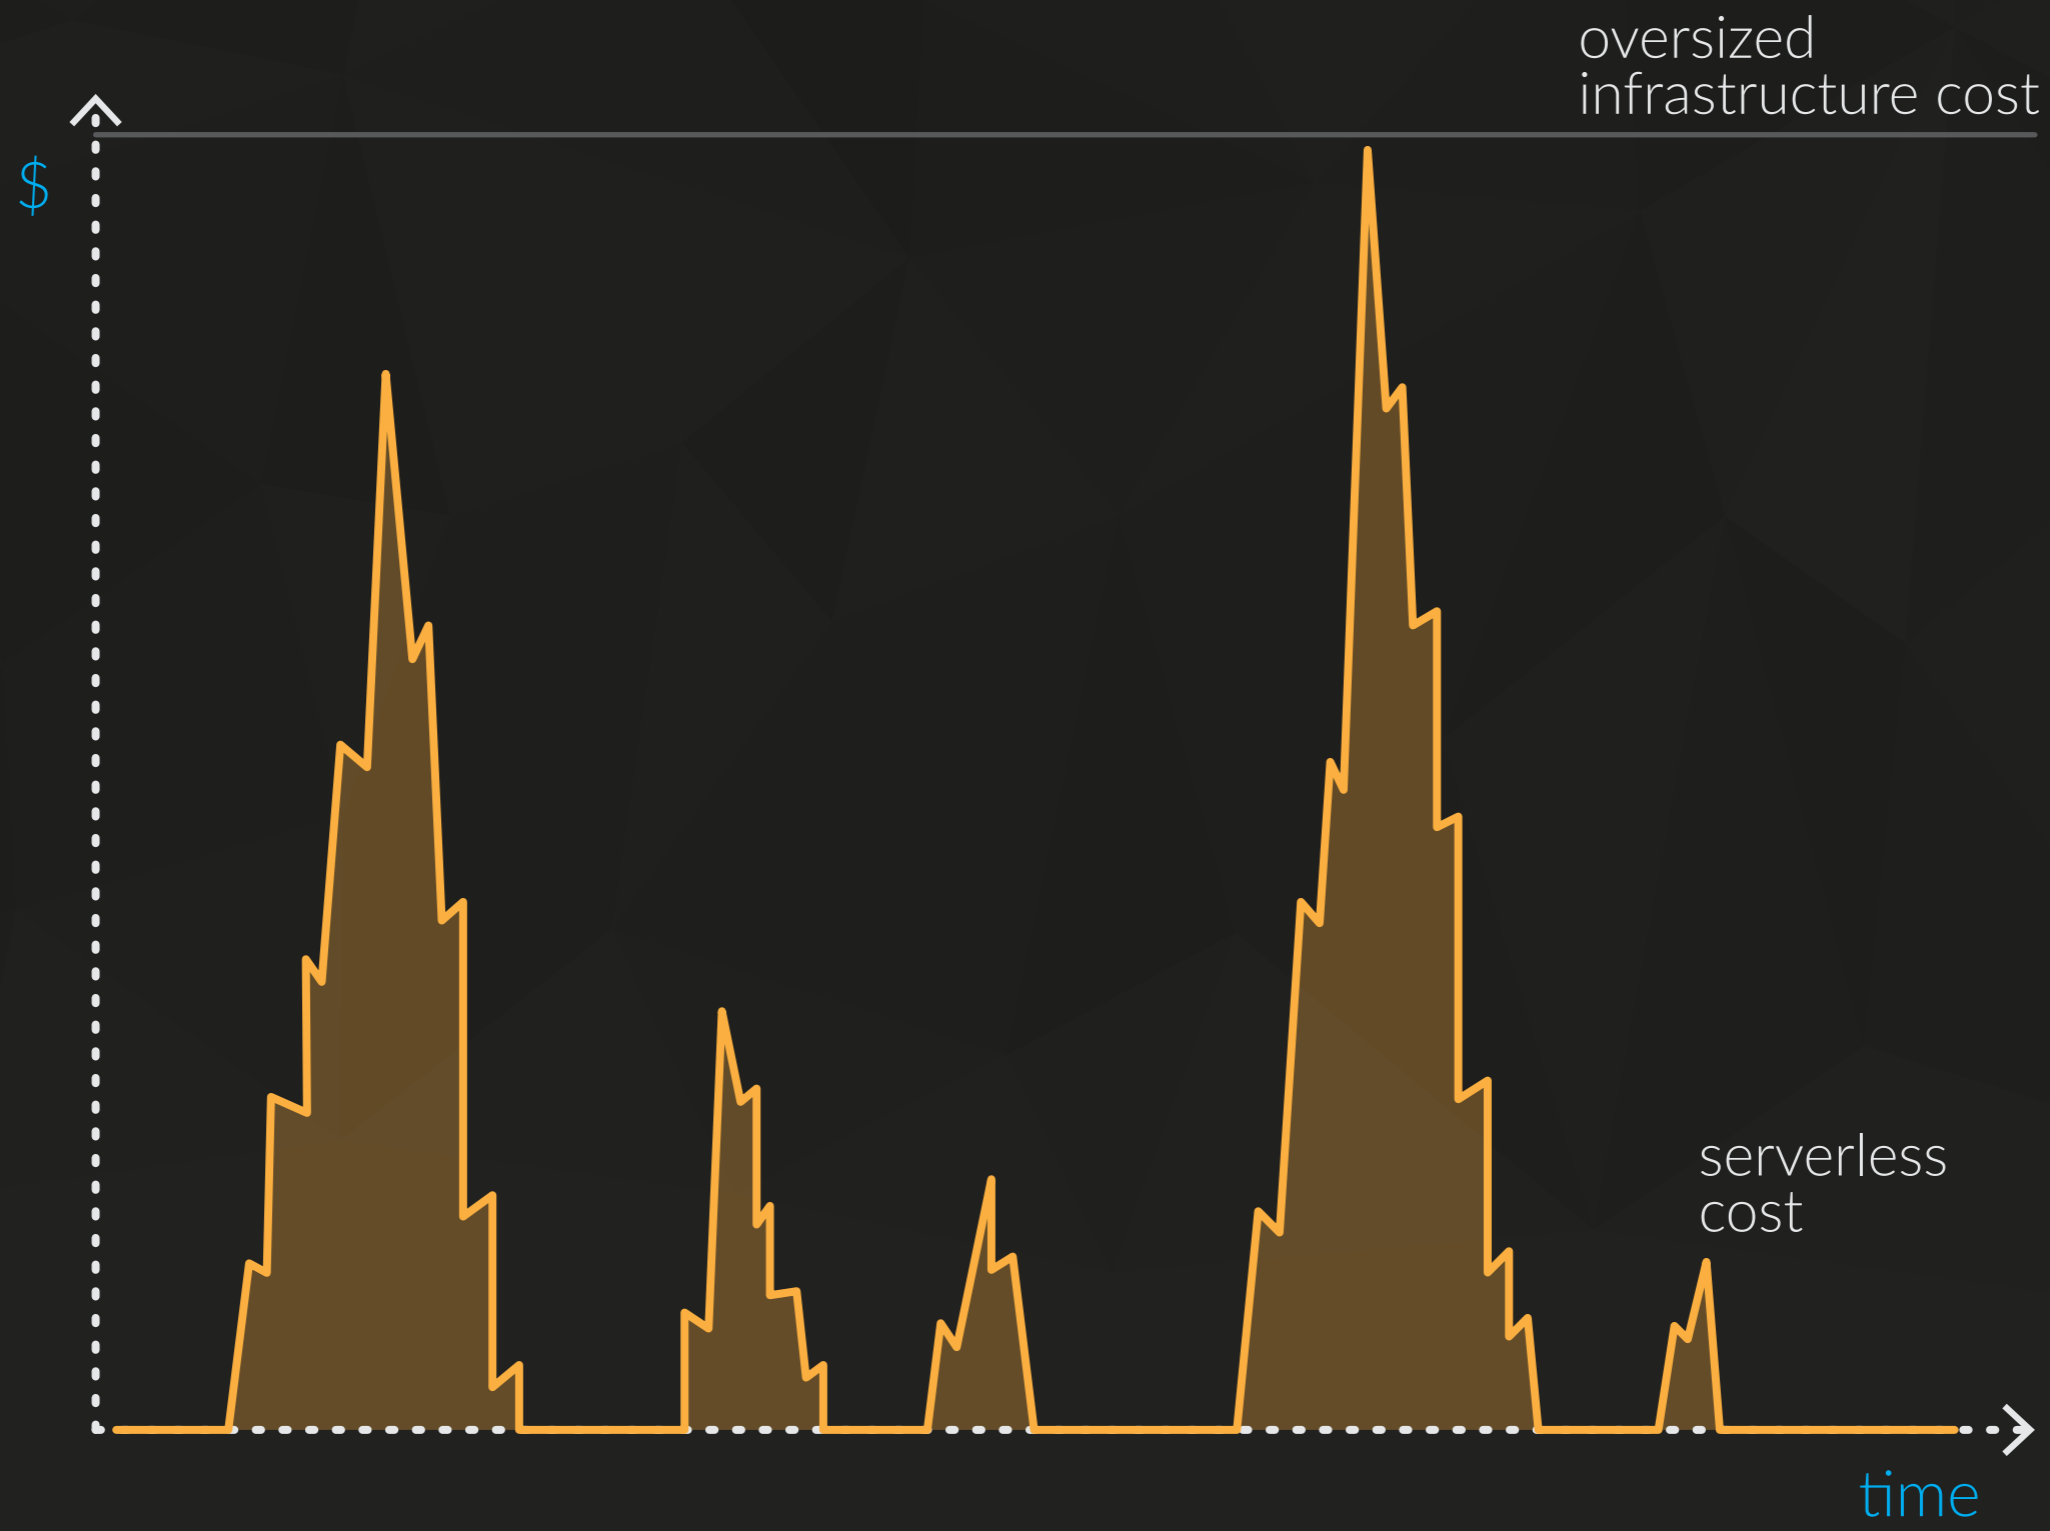

Execution of the microservices/components **in the cloud directly**, without installation of complete system stack (virtual/app servers, etc)

Charging for real usage(computing time etc) and ability to **flexibly scale resources** on demand.

TYPICAL CLOUD

SERVERLESS

SUMMARY

1. Optimal utilization of cloud resources
2. Cost efficiency - payment for usage only
3. Flexible and unlimited scaling
4. Only one serverless platform now

**Ability to process on demand
big amount of data for SMEs and
non large organizations**

SERVERLESS
