For policy-makers in Europe, scientific, engineering and technological innovations offer opportunities to improve life for European citizens and provide benefits for sustainable development worldwide.

The future of Europe is science.

Over the next 15 years, change will not only continue; it will be accelerated by technological possibilities and the growing interconnections between science and society.

Watch this video highlighting some of the challenges ahead of us (health, climate changes, cybersecurity, new materials...) and how scientists in Europe funded by the EU ([H2020 programme](#) [1]), including by FET, are helping shape Europe's future.
