Text and data mining (TDM) has huge potential research and innovation, but the inhibitive European regulatory framework means that EU uptake remains low. The FutureTDM project will first identify these barriers, and then seek to dismantle them.

The growth of big data has been accompanied by new, powerful techniques to harness information from it. Text and data mining (TDM) – the process of deriving high-quality information from digital material – enables researchers to tap into and build upon a wealth of knowledge.
