

Day 2: Group Work “Revising your first ToR”

This afternoon you have to go back to the TOR you presented yesterday.

Rewrite it accordingly to what you have heard this morning (so keep to a minimum all the indicators/logframe stuff). You should:

- come up with a strategy to test a theory/prediction of how the enterprise subsidy can work or cannot work). Find two outcome variables the contractor should look at;
- based on these two variables provide an example of difference in difference that produce a zero or positive impact (using numbers);
- give the contractor a time schedule of deliverables that is reasonable (so you should think about how and when will be appropriate to collect ‘data’ in order to be able to estimate the desired effect).
