1. What is "Open Data"

Open data and content can be **freely used, modified, and shared** by **anyone** for **any purpose**¹

2. How to access the platform

Direct link: <https://cohesiondata.ec.europa.eu/>

Also accessible from Info regio under "Information sources" – "ESIF Open Data"

3. How to access the data

The data behind the ESIF visualisations can be accessed and downloaded from the platform in two ways:

1. Use the "Explore and Share this Data" function to access it.

2. If you know which dataset you want to manipulate or are searching for data or charts, there is a link to the "Catalogue" in the footer => <https://cohesiondata.ec.europa.eu/browse>

 **Catalogue**
Search and browse all datasets and visualisations on this platform.

 **Contact Us**
regio-webmaster@ec.europa.eu

 **Follow Us**
#ESIF
EU Agriculture and Rural Development
EU Employment, Social Affairs and Inclusion
EU Maritime Affairs and Fisheries
EU Regional and Urban Policy

¹ <http://opendefinition.org/>

The catalogue gives access to a search tool with various **filters**.

Regional Policy 2014-2020 EU Payment Details by Country (daily update)

4. What is a Metadata page?

Each dataset has a metadata page (with its own URL). It gives you access to important information about the dataset as follows:

- Data description;
- Date of Last update;
- Featured content, i.e. graphs created by the data owner;
- Key details about the dataset: Usage, owner, contact, licence, etc. ;
- Structure of the data;
- Related content (i.e. graphs created by other users).

Before you start reusing the data it is essential to understand what the data relates to and how it is structured in order to make useful interpretations and charts. The METADATA is there for that purpose. For instance the metadata highlights important characteristics as follows:

- In all cases for 2014-2020 the values are expressed cumulatively. Some other datasets have annualised values;
- The data may be presented in annual snapshots. In those cases you can compare annual timeseries but never aggregated them;
- Financial values are always expressed in current prices.

5. Create a profile to fully exploit the platform functionalities

Create a profile with you own password by enrolling on this site: <https://cohesiondata.ec.europa.eu/login>

With a profile you can filter and create objects on the platform for reuse by you and other users.

6. Manipulating the data

Once you “view the data” from the metadata page the platform offers several ways to interact with the data.

You can for instance filter a dataset to keep just one country, one Thematic Objective, one fund; you can create charts or other types of visualisations to illustrate a report or to embed on a webpage.

All the functionalities are accessible in the toolbar on the top right.

a. Manage

This function allows you to reorder the columns with a view to exporting.

ESIF 2014-2020 FINANCES PLANNED DETAILS

This dataset provides information on planned total and EU financing under the different ESI Funds (2014-2020) in current prices. The data is taken from the adopted financial tables and is broken down

Sort & Roll-Up

Filter

Filter this dataset based on contents.

No conditions defined yet.

+ Add a New Filter Condition

Select "MS" (1st column) "is" and choose a country code "AT" to keep one Member State

You can add as much filter conditions as you want. Let's filter out the Technical Assistance

Filter

Conditional Formatting

Sort & Roll-Up

Filter

Filter this dataset based on contents.

MS is

☒ AT

☐

TO is not

☒ TA

☐

To aggregate the data, you must use the Roll-Ups and Drill-Downs function.

To group similar data (in our example: display the amount allocated for each OP by Fund, by TO) use "Group by"

"Roll-up" allows the mathematical functions (Sum, average, Maximum...).

AT_training

When exporting data file there are two typical challenges that users face if using MS Excel:

1. The **number and financial amounts with commas and decimal formatting are not accurately imported** into Excel giving false results when checked against reference values on the platform:
=> See **Annex 1** to correct set your default excel settings for numbers and financial amounts
2. The .csv file is **not formatted in columns**:
=> see **Annex 2** to see how to reformat the .csv format in excel columns and cells.

e. Visualize

This function allows you to create and save a chart (graph) with or without filters for other users.

ESIF 2014-2020 FINANCES PLANNED DETAILS

This dataset provides information on planned total and EU financing under the different ESI Funds → 2014-2020 in current prices. The data is taken from the selected financial table and is broken down

There are two ways to get started. Select a chart type to see recommended dimensions and measures or select a dimension or measure to see recommended chart types.

Preview of ESIF 2014-2020 FINANCES PLANNED DETAILS

MS	MS N.	CCI	Ver	Title	Fund	Prior.	TO_e...	To sh...	TO la...	Cete...	EAFR...	Meas...	EAFR...
CZ	Czech Re...	2014CZ14...	2	Maritime ...	EMFF		TA	Technical ...	Technical ...	VOID	VOID	VOID	VOID
BG	Bulgaria	2014BG1...	3	Regions ...	ERDF	1	10	Educato...	Investing...	Less deve...	VOID	VOID	VOID

- Set the filters

This function allow you to set public or hidden filters, by fund, Member States, themes, etc., to focus the chart on the desired topic. Public filters allow users to change Member State, theme, etc.

- Data selection

There are several steps:

- Select the dimension to be presented in the chart – i.e. Member State, Fund, Year, etc.
- Chose the chart type from the central menu. The menu suggests which chart style is most appropriate;
- Chose the measure to display;
- If needed, choose a second measure (or more) per dimension

- Scale (change the scale)

This allow you to adjust the scale.

- General (labelling, formatting, colours)

Label the chart, change the formatting and colours used for the different measures displayed.

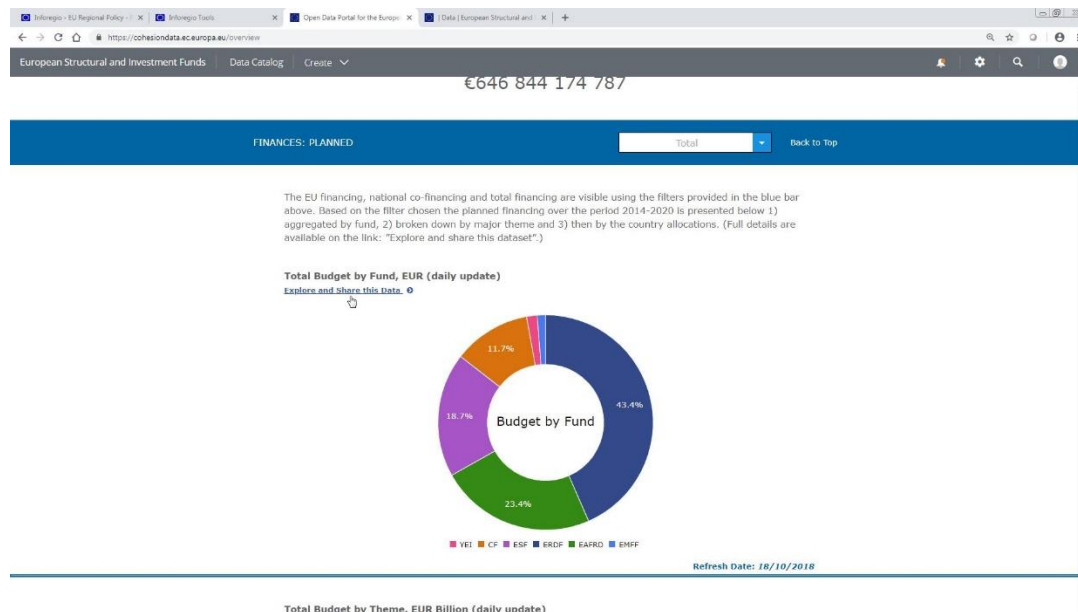

- **Formatting legends and flyouts**

Automatically display the legend; format the flyouts to display a relevant measurement unit.

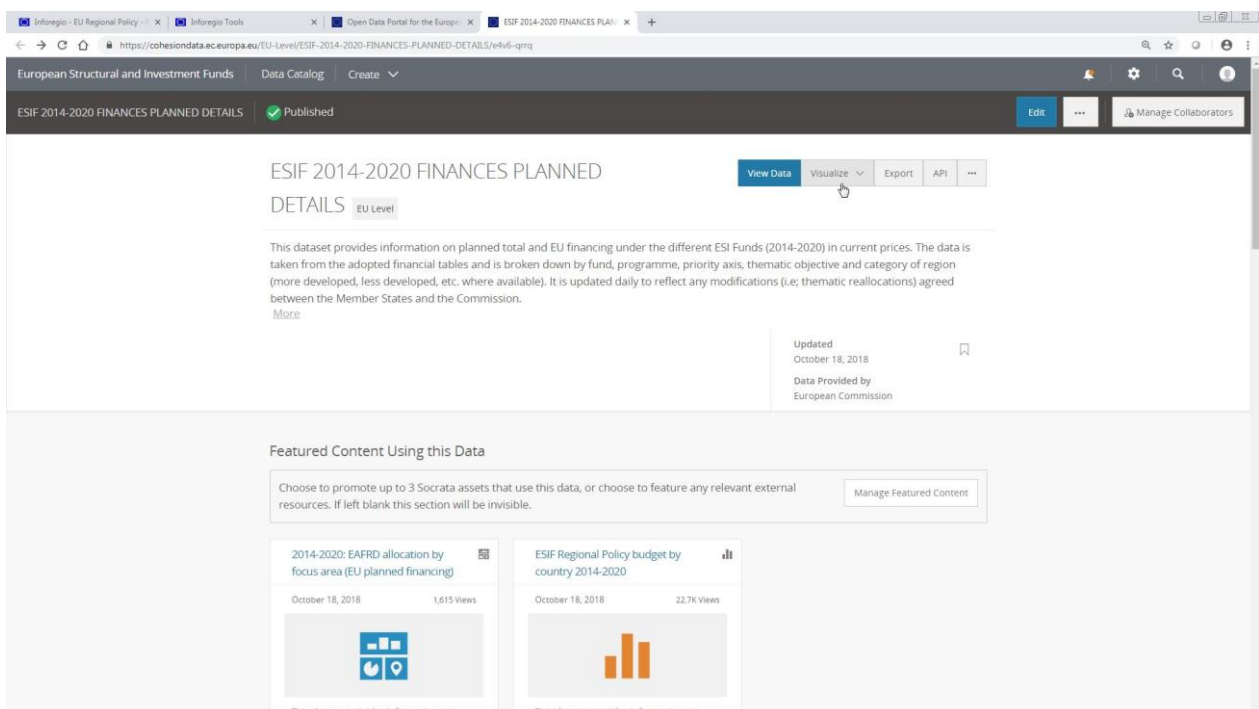

f. Example of visualisation

In this exercise, we will create a pie chart showing a breakdown by fund of the total EU contribution, using the dataset [ESIF 2014-2020 finances planned details](https://cohesiondata.ec.europa.eu/level/ESIF-2014-2020-FINANCES-PLANNED-DETAILS/e4v6-qm9)

1. Access the dataset: Use the "Explore and Share this Data" function to access it (or choose a dataset from the catalogue).

2. Click on "visualize"

3. Select "Create Visualization"

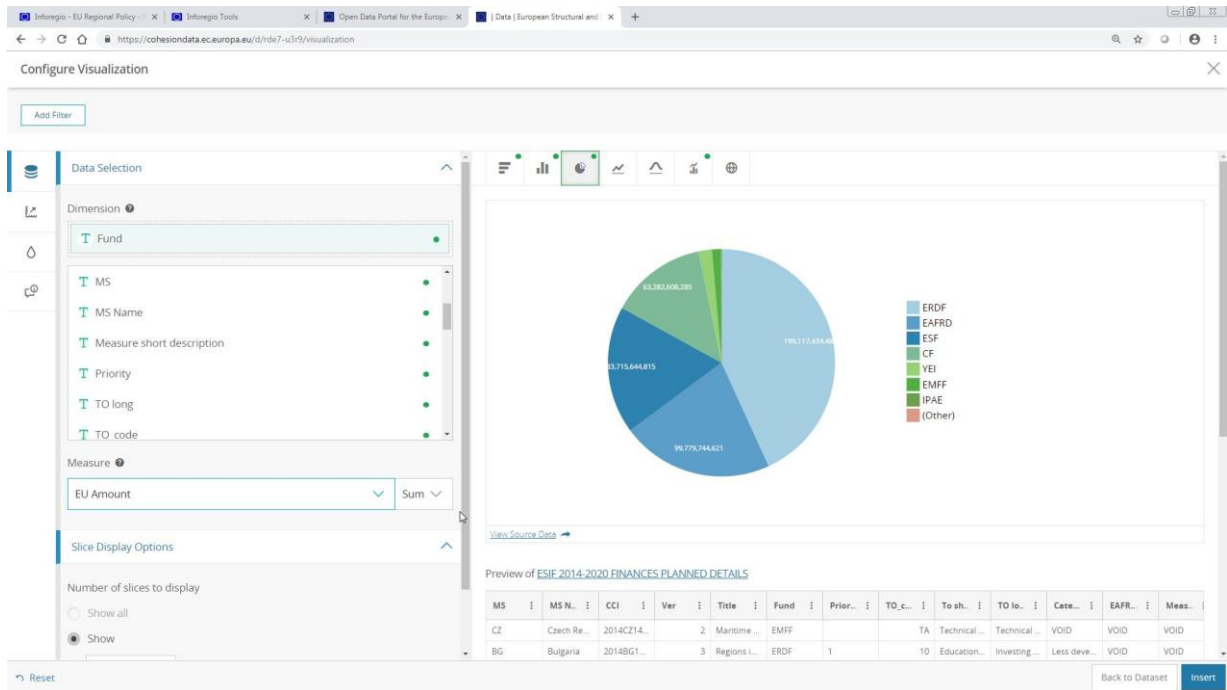

The screenshot shows the 'ESIF 2014-2020 FINANCES PLANNED' dataset page in the Infogrio portal. The 'Visualize' dropdown menu is open, showing options like 'Create Visualization', 'Create Data Lens', 'OPEN IN...', 'Plotly', and 'More...'. The 'Create Visualization' option is highlighted. The page also displays the dataset description, update date (October 18, 2018), and data provider (European Commission).

4. Select a type of chart (here a pie chart). Then, choose the **dimension** under "Data selection". Here, we will do a breakdown by Fund so **Fund** is the dimension

The screenshot shows the 'Configure Visualization' interface. The 'Data Selection' panel shows 'Fund' selected as the dimension. The 'Measure' is set to '(Count of Rows)'. The 'Slice Display Options' are set to 'Show'. A pie chart is displayed, showing the breakdown of ESIF 2014-2020 FINANCES PLANNED by Fund. The legend indicates the following values: EAFRD (4,155), ERDF (2,186), ESF (974), EMFF, CF, IPA, YEI, and (Other).

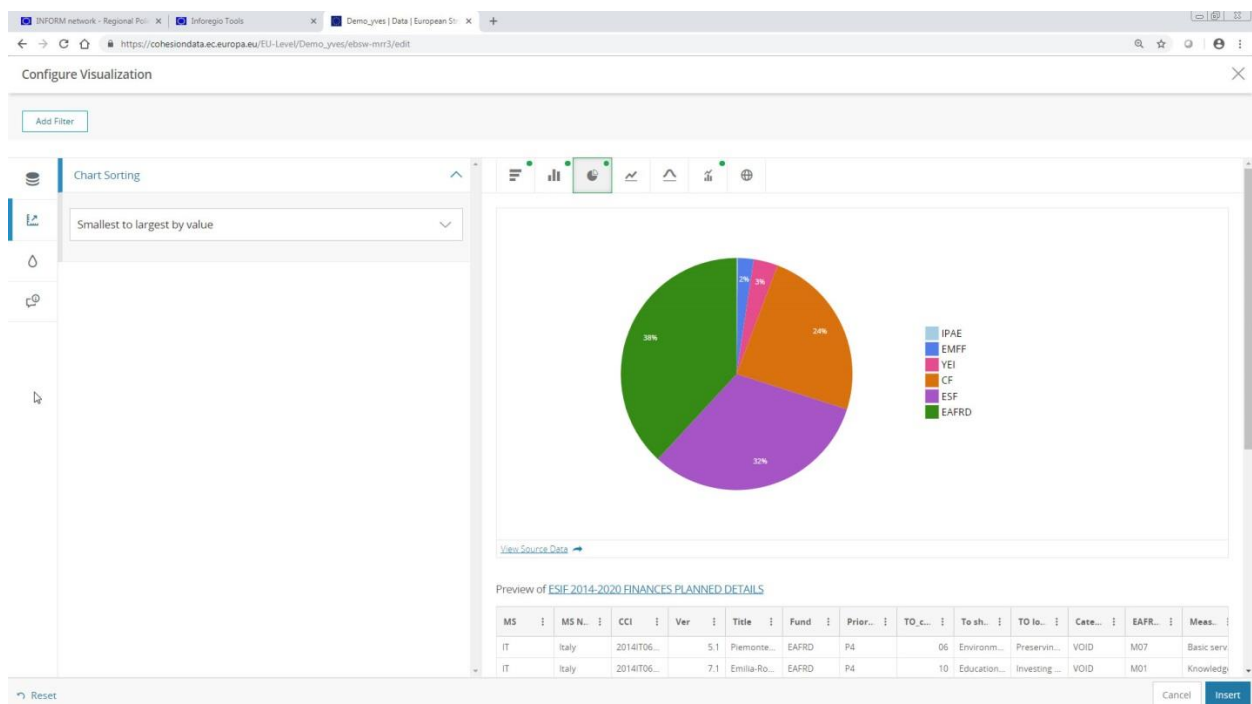

MS	MS N...	CCI	Ver	Title	Fund	Prior...	TO, c...	To sh...	TO lo...	Cate...	EAFR...	Meas...
CZ	Czech Re...	2014CZ14...	2	Maritime ...	EMFF			TA	Technical ...	Technical ...	VOID	VOID
BG	Bulgaria	2014BG1...	3	Regions I...	ERDF	1		10	Education...	Investing...	Less deve...	VOID

5. Select a **Measure** (the element you want to compare in your breakdown by Fund). Here we will compare the EU contribution for the period 2014-2020 for each ESI Fund so the measure will be **EU Amount**. **"Sum"** on the right is used to add all amounts for all OPs related to one fund. Other options exist (average, minimum and maximum, average or count).

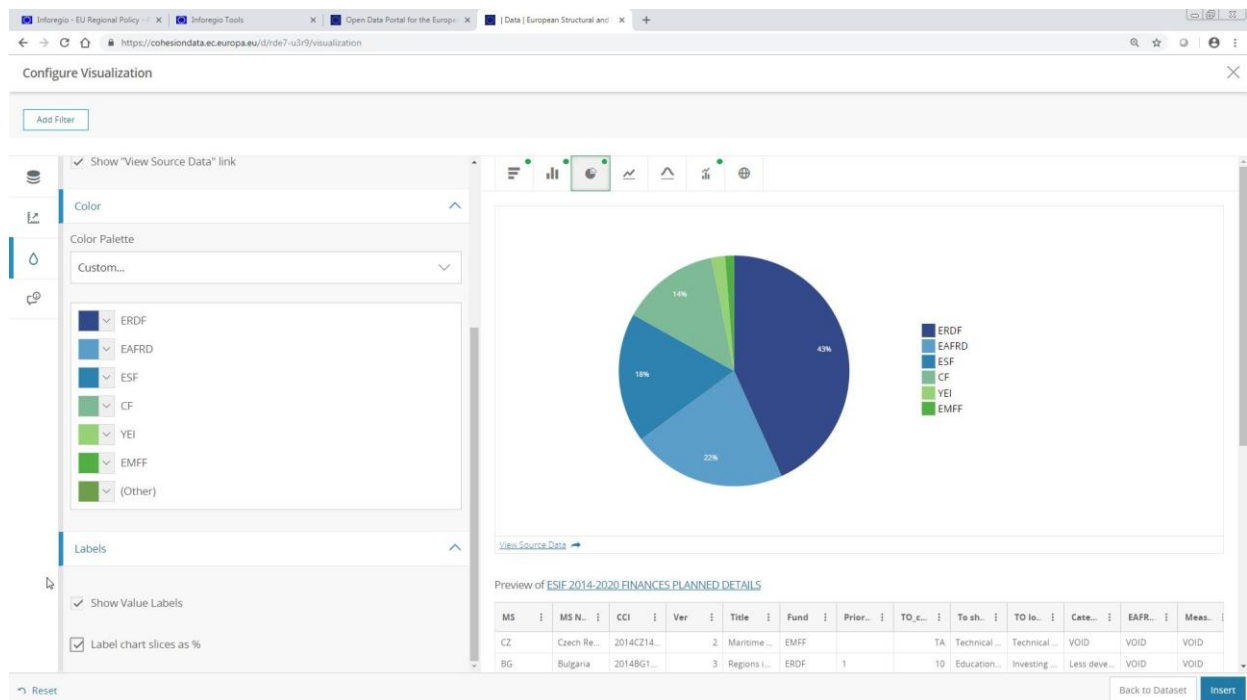

In the **Slice Display Options**, we can choose how many elements to display in the chart. Here we will exclude the last 2 elements, IPAE and (Other). Important, the selection will retain the elements from the largest to the smallest. To change this, you go in **"Axis"** and change **"Chart sorting"** to **"Smallest to largest by value"**.

You can notice that the selection of funds has changed.

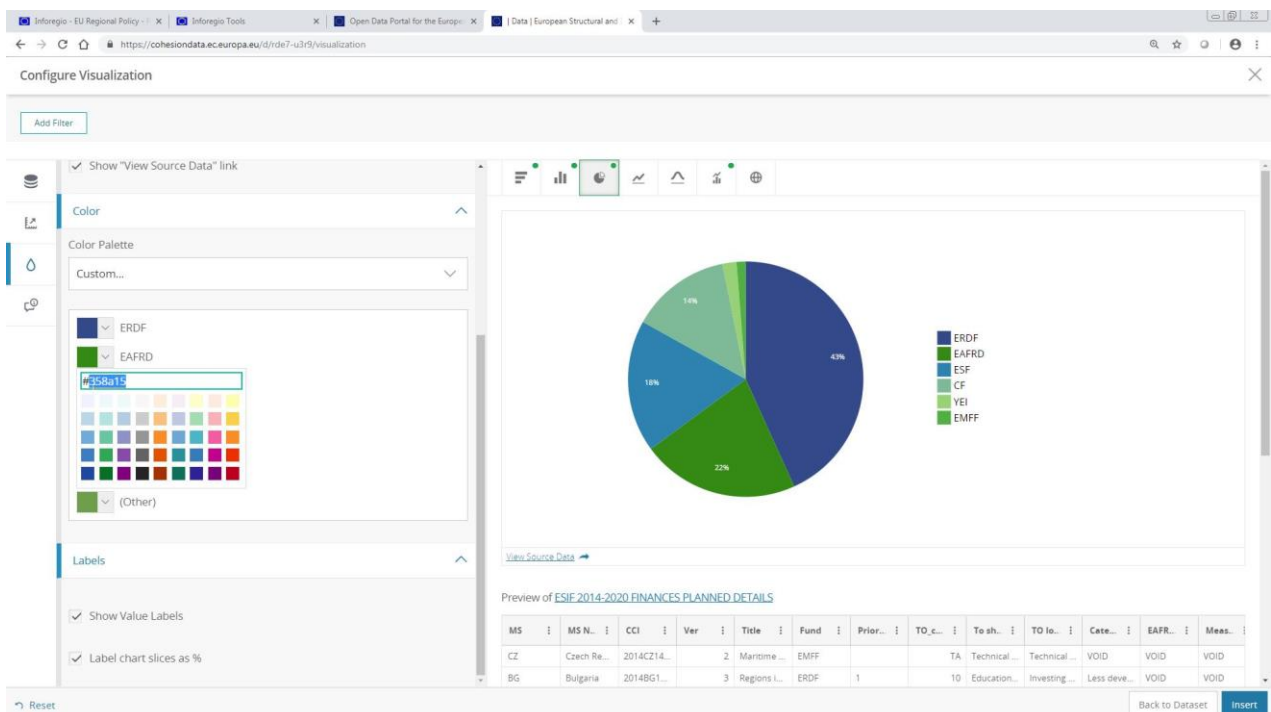

6. In "**Presentation**", you can edit the colours, display % (for pie charts only) add or remove title, description, as follows:

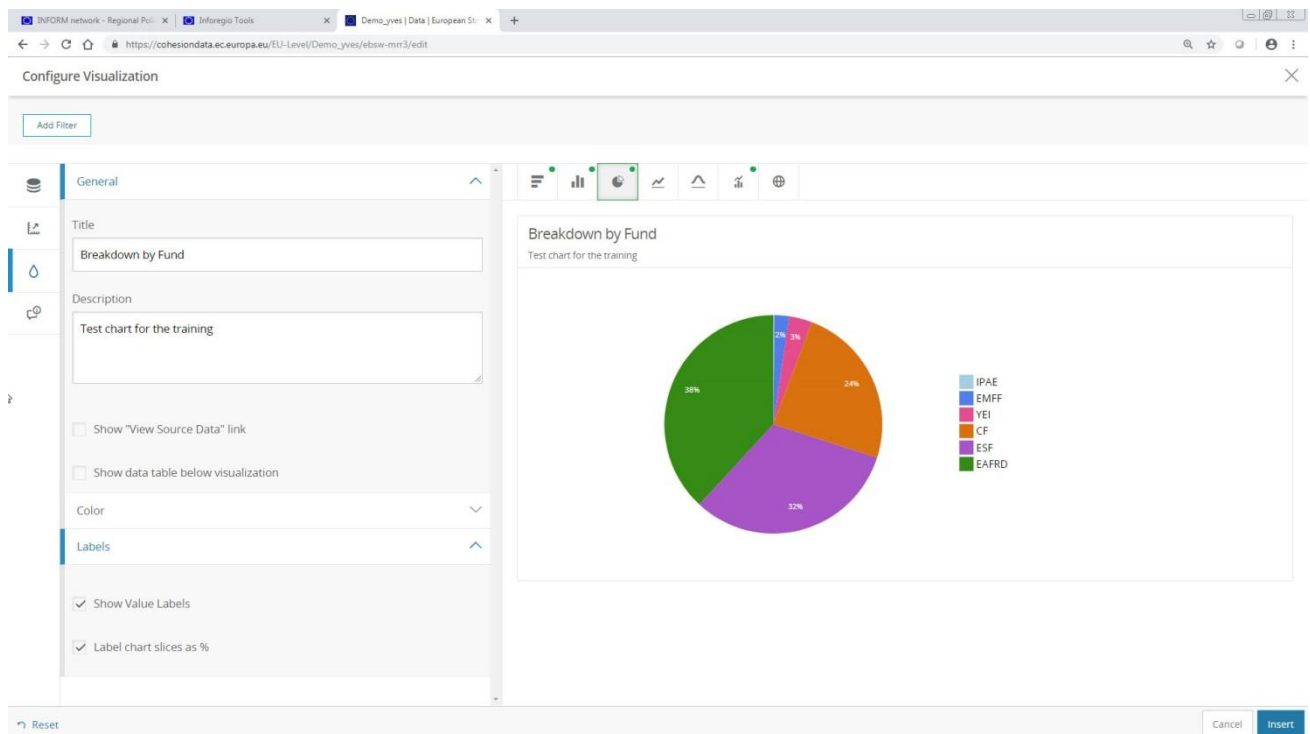

... Switch to %

... Edit Colors

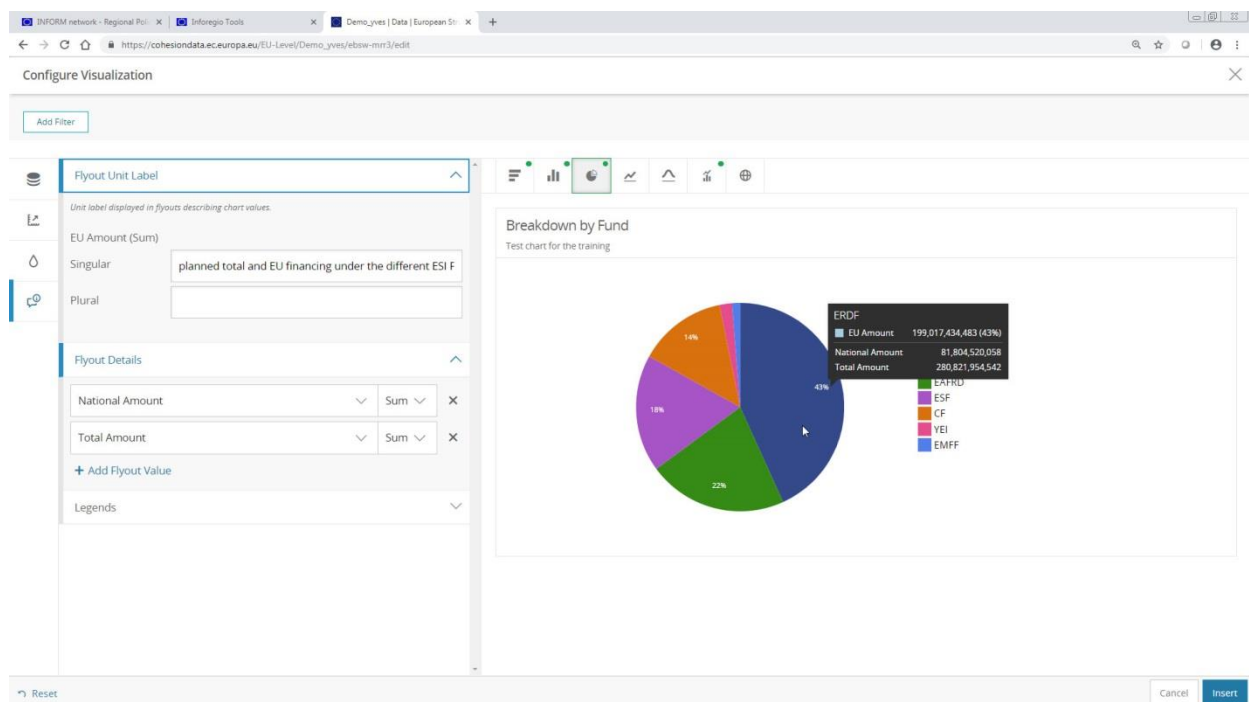

... Add Title and Description; show a link to the dataset or the dataset under the chart

7. Add Flyout information

In the section "**Legends & Flyouts**", you can add, remove or edit the legend of the graph and the information displayed when your mouse cursor hovers over a slice of the chart.

g. Embed

Embedding allows the charts to be published on webpages by providing an “embed code”.

Choose the size or customize it, use the "Preview" button and copy the embed code.

Annex 1: Setting the correct number format to open and read an exported “.CSV (for excel)” file

In WINDOWS10:

1. open windows settings (In Windows not in EXCEL)
2. then open regional settings
3. then select 'additional date, time & regional settings'
4. then select 'change date, time or number formats'

5. in the next pop-up window, press button 'additional settings'

6. In the next pop-up window, change the following settings

Customize Format

Numbers Currency Time Date

Example

Positive: 123,456,789.00 Negative: -123,456,789.00

Decimal symbol: .

No. of digits after decimal: 2

Digit grouping symbol: ,

Digit grouping: 123,456,789

Negative sign symbol: -

Negative number format: -1.1

Display leading zeros: 0.7

List separator: ,

Measurement system: Metric

Standard digits: 0123456789

Use native digits: Never

Click Reset to restore the system default settings for numbers, currency, time, and date.

Reset

OK Cancel Apply

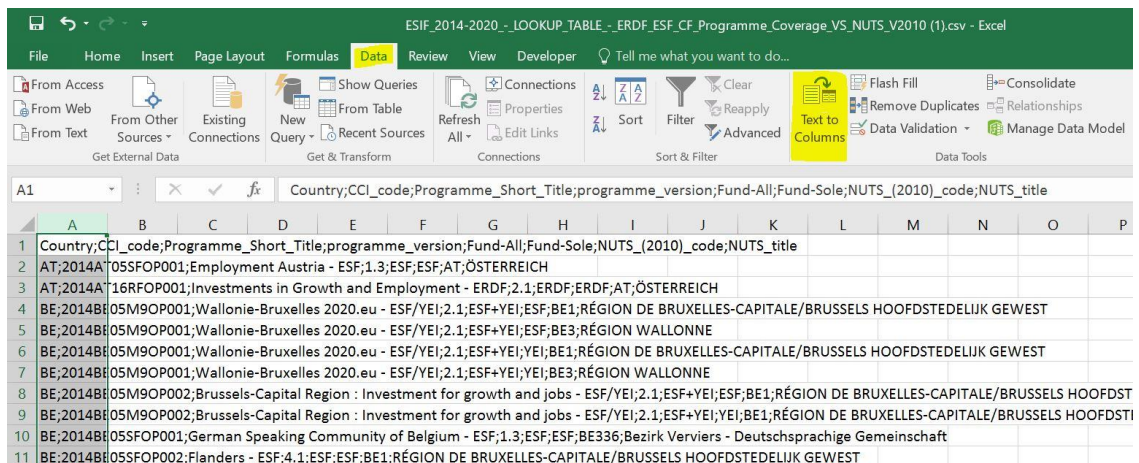

7. Decimal symbol : dot '.'
8. Digit grouping symbol : comma
9. List separator : comma
10. Apply

Annex 2: Reformatting an exported “.CSV (for excel)” file to display data in cells

Is your data exported in “CSV for excel” format presenting strangely with data rows all grouped in the first cell of each row?

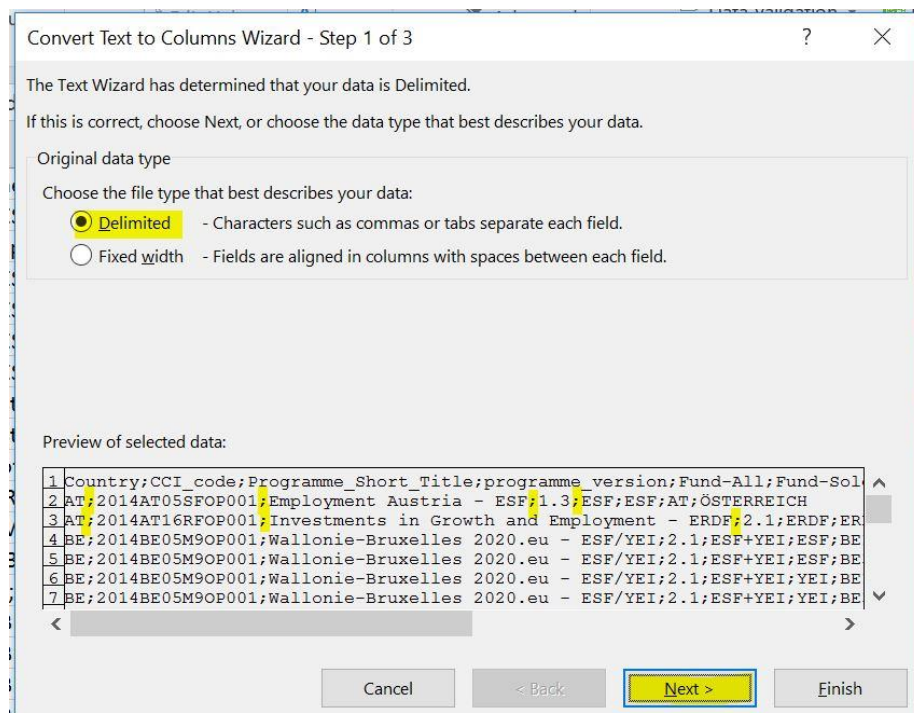

Follow these steps in Excel:

1. Select the Column A
2. In the menu select “Data” => “text to columns”

3. In the task window – Step 1 of 3:

- a. Choose delimited
- b. Take note of which character is used to delimit the data elements - either “;” or “,”
- c. Click Next

4. In the task window – Step 2 of 3:

- Choose either “Semicolon” or “Comma” depending on the format of the source data
- That should now show you column formatted data in the Data Preview
- Click “Finish” to see the dataset reformatted in an excel readable format.

Convert Text to Columns Wizard - Step 2 of 3

This screen lets you set the delimiters your data contains. You can see how your text is affected in the preview below.

Delimiters

☒ Tab

☒ Semicolon

☐ Comma

☐ Space

☐ Other:

☐ Treat consecutive delimiters as one

Text qualifier: "
