

# JTPeers provides expert support and helps regions learn from one another

The European Commission provides support for Just Transition Fund territories through the JTPeers exchange programme, to encourage knowledge sharing and collaboration.

## How regions benefit from JTPeers

The JTPeers programme offers two parallel services, **JTPeers Exchange** and **JTPeers Experts**, which help pool and disseminate expert knowledge about the transition across EU Just Transition Fund regions. Each service is designed to help bridge the knowledge gap between regions:

- **JTPeers Exchange** facilitates peer-to-peer exchanges between experts, practitioners, and political decision-makers from eligible territories, focused on facilitating knowledge transfer
- **JTPeers Experts** provides a searchable digital database where experienced practitioners can register and in which regions can find relevant expert support

Previous experience has shown that many regions face similar challenges on their just transition journey, and that experience and knowledge on how to meet those challenges is unevenly distributed.

By setting up peer-to-peer exchanges and the Experts Database, JTPeers aims to make the necessary information for a fair transition readily available to those who need it, supporting a quick and efficient shift towards carbon neutrality.

## Expected outcomes

- Enhanced collaboration and knowledge sharing among experts and stakeholders
- Reliable database of just transition professionals
- Improved implementation of Territorial Just Transition Plans (TJTPs), thanks to expert guidance and experience sharing

## How JTPeers helps

The JTPeers programme focuses on exchanging knowledge and experience in the following areas:

- Just transition processes: executing Territorial Just Transition Plans
- Stakeholder engagement and participation: active engagement and collaboration with local communities and stakeholder groups
- Project delivery and governance: project development, project management, monitoring and evaluation mechanisms, finding and attracting investors and cooperation partners
- Key thematic areas: up-skilling and re-skilling, green economic diversification, circular economy, clean energy development, decarbonisation of industries, land restoration, just transition measurement, and social inclusion
