

IMPLEMENTATION OF E-COHESION

General characteristics

LITHUANIA

No. of **targeted national/regional operational programmes** covering ERDF/CF: **1**

No. of **e-Cohesion systems**: **1**

At a glance:

e-Cohesion system: DMS (Duomenų Mainų Svetainė).

Introduction of the system: Operational since 2014.

Type of the system: National system - it covers the only national OP and does not support any Interreg programmes.

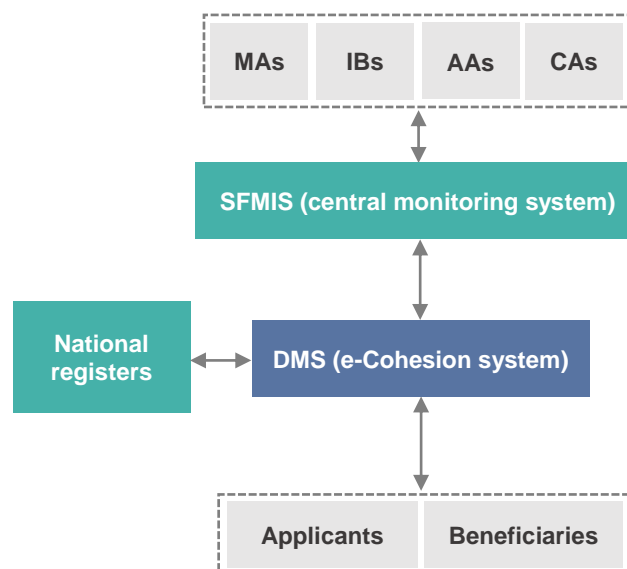

Implementation mode: Highly centralised.

Use during 2021-2027: It is foreseen that a new system will be developed, which will be largely based on the current system.

Fund coverage of the system: ☒ ERDF ☒ CF

Context and structure of e-Cohesion

- Lithuania's implementation of e-Cohesion is **highly centralised** - DMS is the only system used in the country and covers the only OP "EU Structural Funds Investments for 2014-2020";
- DMS is linked with Lithuania's **central monitoring system for ESIF (SFMIS)** and several other national governmental registers (social insurance registry, register of legal entities);
- DMS is not integrated with the **European Commission's System for Fund Management (SFC2014)**;
- All major **authorities** and other bodies (National Special Investigation Service, Financial Crime Investigation Service) access the data submitted by applicants and beneficiaries through the central monitoring system;
- E-Cohesion system supports not only the key processes related to implementation, but also handles the application process - ESIF **applicants and beneficiaries** exchange information directly using DMS.

Key principles of e-Cohesion: interoperability and once-only encoding

Principles: Extensive reuse of information; no interoperability with EU tools.

DMS supports **once-only encoding on the project-level**. Data and documents provided by beneficiaries are shared with all relevant authorities.

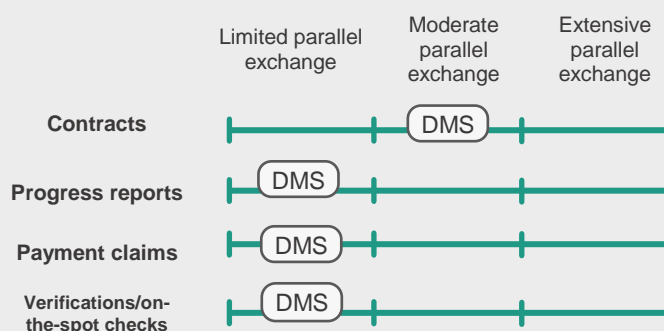

The system **extensively supports the pre-filling of information**:

- Information is pre-filled based on data entered during the project application and during previous steps of the operation and from some national registers;
- The **pre-filling of information is highly valued** - all beneficiary respondents using DMS aware of this functionality perceived it as useful to their operations (resulting in efficiency gains and reducing the number of errors).

Parallel data exchanges: Limited exchange of information outside of the system.

The use of DMS is mandatory for project-management, and **beneficiaries indicate that they use the system for most key processes very extensively**, with limited data exchanges taking place outside the system.

Implementation of e-Cohesion features

Key processes: Support of project cycle from start to finish.

- **DMS supports all operations related to project application and implementation** (progress reports, modification requests, payment claims and management verifications/on-the-spot checks);
- **Payment claims and progress reports are key processes of DMS** – nearly all beneficiary respondents indicate that they submitted all of their relevant data and documents only through the system for these operations.

Functionalities: Support for all required functionalities, including interactive forms.

- **DMS supports all functionalities associated with user-friendliness** (interactive forms, automatic calculations, checks for incorrect/missing data, system-generated alerts, online status tracking, validity of e-signature and availability of previous data);
- **All beneficiary respondents aware of the functionalities provided by DMS consider them as useful**, meaning that they result in notable time gains and reduce the number of errors for their users.

Results of the introduction of e-Cohesion

Effectiveness – results and simplification

- The introduction of DMS has resulted in **extensive improvements and simplification**;
- Nearly all respondents agree that the introduction of the system has led to significant improvements in various areas and has simplified the way they handle information compared with paper-based processes or email exchanges;
- **DMS has extensively improved information exchanges between authorities and beneficiaries** – most respondents report that its use has reduced repeated transmission of the same information, indicating that once-only encoding is highly valued by users of the system.

Efficiency – benefits vs costs

- **The benefits of using DMS compared to its costs are extensive** across beneficiaries' key processes;
- Nearly all respondents indicate that the benefits (reduced administrative burden, simplified procedures) of using the system outweigh any associated costs (the time and effort required to use it).

User-friendliness

- **DMS shows extensive user-friendliness** – most beneficiaries perceive the system as easy to navigate and operate, and consider it as clear and self-explanatory;
- Indication for high satisfaction among users of e-Cohesion systems is whether authorities continue to develop and improve the existing system. In the case of DMS, **nearly all beneficiary respondents feel that the system's functionalities and its overall functioning are being continuously improved, indicating extensive improvements.**
