

# IMPLEMENTATION OF E-COHESION

## General characteristics

No. of **targeted national/regional operational programmes** covering ERDF/CF: **1**

No. of **e-Cohesion systems**: **1**

### At a glance:

**e-Cohesion system:** IAS (ΟΠΣ)

**Introduction of the system:** Operational since 2000.

**Type of the system:** National system - it covers the only national OP and does not support any Interreg programmes.

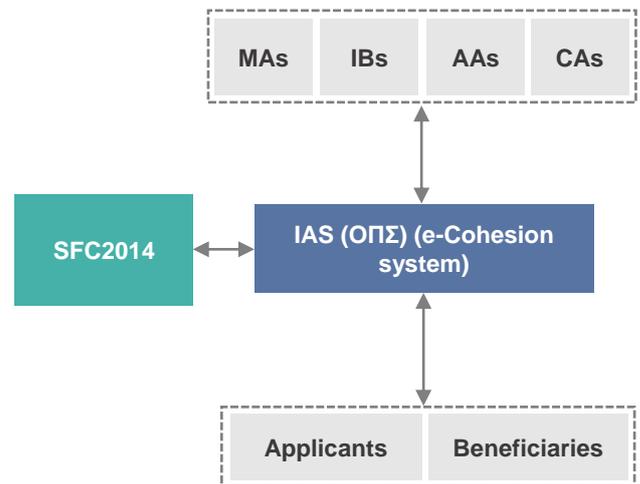

**Implementation mode:** Highly centralised.

**Use during 2021-2027:** The system will be updated to adapt to the new regulations of the 2021-2027 programming period.

**Fund coverage of the system:**  ERDF  CF

## Context and structure of e-Cohesion

- Cyprus' implementation of e-Cohesion is **highly centralised** – IAS (ΟΠΣ) is the only system used in the country and covers the only national OP "Competitiveness and sustainable development" for 2014-2020";
- IAS (ΟΠΣ) is integrated with the **European Commission's System for Fund Management (SFC2014)** but is not linked to other **national governmental registers**;
- All major authorities access the data submitted by applicants and beneficiaries through the e-Cohesion system;
- The e-Cohesion system supports not only the key processes related to implementation, but also handles the application process - ESIF **applicants and beneficiaries** exchange information directly using IAS (ΟΠΣ);
- The **use of IAS (ΟΠΣ) is mandatory for project-management**.

## Implementation of e-Cohesion

**Principles:** Interoperability and once-only encoding

- **IAS (ΟΠΣ) supports once-only encoding at the project-level:** Data and documents provided by beneficiaries are shared with all relevant authorities, and this has minimised administrative burdens;
- **The system supports the pre-filling of information:** Information is pre-filled based on data entered during the project application and during previous steps of the operation; however, there is no interoperability with other national registers, meaning that IAS (ΟΠΣ) does not prefill information based on other external sources.

**e-Cohesion features:** Coverage of processes and functionalities

- **IAS (ΟΠΣ) supports all processes related to project application and implementation** (progress reports, modification requests, payment claims and management verifications / on-the-spot checks);
- **IAS (ΟΠΣ) supports all functionalities associated with user-friendliness** (interactive forms, automatic calculations, checks for incorrect/missing data, system-generated alerts, online status tracking, validity of e-signature and availability of previous data).

**Please note that this fiche is not informed by the survey results. We did not receive enough responses, therefore, the information presented in this fiche builds on desk research and additional information received from relevant authorities.**
