IMPORTANT NOTICE ON THIS WORK PROGRAMME

This Work Programme covers 2018, 2019 and 2020. The parts of the Work Programme that relate to 2020 (topics, dates, budget) have, with this revised version, been updated. The changes relating to this revised part are explained on the Funding & Tenders Portal.

(European Commission Decision C(2020)4029 of 17 June 2020)
About this document

This is the Work Programme part for the three-year European Innovation Council (EIC) pilot under Horizon 2020, the EU's Framework Programme for Research and Innovation.

To prepare for applying to an EIC pilot call, please go to the 'EIC pilot Web Page', which will direct you to the most appropriate funding scheme for your needs.

http://ec.europa.eu/research/eic/index.cfm

The 'EIC pilot Web Page' will channel you through to the Horizon 2020 Funding & Tenders Portal, which contains all the practical information you need to participate as well as details of your National Contact Point, who can give you support in your own language.
Summary

The European Innovation Council (EIC) pilot supports researchers and innovators developing breakthrough innovations with the potential to create new markets and boost jobs, growth and prosperity in Europe. It will pilot two new schemes:

(i) the EIC Pathfinder pilot (grant only)

FET-Open  
*Early-stage, science and technology research by interdisciplinary consortia exploring visionary ideas for radically new future technologies that challenge current paradigms and venture into the unknown. Open to research into any area of technology, it aims to attract new, high-potential research and innovation players.*

FET-Proactive  
*Cutting edge-high-risk/ high reward research and innovation projects that aim to firmly establish the future potential of a new and promising demonstrate a new technological paradigm within a pre-defined scope.*

(ii) the EIC Accelerator pilot (grant only and blended finance\(^1\))

SME Instrument  
*Close-to-market and projects with a potential to scale up of a single SME established in EU Member States or Horizon 2020 associated countries.*

Other Calls:

Fast Track to Innovation (FTI)  
*Close-to-market projects of consortia with three to five entities from at least three different EU Member States or Horizon 2020 associated countries. Industry must participate. Interdisciplinary approaches encouraged.*

Other actions:

Horizon Prizes  
*Horizon Prizes boost breakthrough innovation by fostering solutions to challenges which bring major benefits to society.*

Support Actions  
*Help to optimise the impact of EU investment in EIC innovators and innovations; they contribute to building an EIC community and a vision underpinning a possible future EIC.*

---

\(^1\) Blended finance means a financial support to an action, consisting in a combination of a grant with an investment in equity. Applicants may apply for the blended finance option after the cut-off date of 5 June 2019.

Budget for European Innovation Council pilot .............................................................. 107
Introduction

The last decade saw the emergence of major new markets and a global platform economy. Today's successful, high-growth innovative enterprises often rely on new business models and technologies emerging at the intersection between different sectors and disciplines.

Despite early technology leads, the EU has supported the creation of few companies that shape and capture these new markets. While Europe compares relatively well internationally in terms of numbers of start-ups, too few of these succeed in scaling up and generating the new, high-skilled jobs on which Europe's future depends and which would strengthen Europe's position in the platform economy.

The EU needs to help improve the conditions enabling the emergence and rapid scale-up of highly innovative enterprises.

The interim evaluation of Horizon 2020 found that while the programme demonstrates potential in terms of fostering breakthrough, market-creating innovation, support for doing so needs to be substantially strengthened. Moreover, in its 28 June 2018 conclusions, the 'European Council invites the Commission to launch a new pilot initiative on breakthrough innovation within the remaining period of Horizon 2020' in view of setting-up a fully-fledged European Innovation Council under the next Multiannual Financial Framework.

This part of the Horizon 2020 work-programme aims to do just that. It contains three main novelties: reformed and simplified funding instruments; a more flexible and pro-active approach to management (needed for high-risk projects and fast moving technologies and markets); and governance, with an EIC pilot Advisory Board.

These actions represent a new pilot phase for a European Innovation Council (EIC) that has been proposed for the next EU research and innovation programme. They provide support (including blended finance under the EIC Accelerator pilot – SME Instrument) to innovative firms and entrepreneurs with the potential to scale up rapidly at European and global levels. They are exclusively aimed at people and companies who have ideas that are radically different from existing products or services on the market or under development (not incremental improvements), are highly risky, and require significant investments to get to market. As such they complement the focus on a broader innovation dimension (e.g. sector-specific, incremental) in other parts of the work programme (such as Innovation in SMEs, Access to Risk Finance, Leadership in Industrial Technologies).

The objective is to strengthen breakthrough innovations and boost the
number of high-growth companies. It is anticipated that this part of the work programme will support around 1000 projects to that effect. The overall budget of €3 billion broadly reflects the multiannual funding profile of the constituent elements.

The EIC Pilot tests two funding schemes: the EIC Pathfinder pilot, and the EIC Accelerator pilot. These two schemes build on and deepen the current Horizon 2020 instruments.

The EIC Pathfinder pilot targets high-risk cutting edge projects exploring new territories aiming at developing radical and innovative technologies. It encompasses FET-Open and FET-Proactive.

FET-Open uses interdisciplinary collaboration to tap into Europe's excellent science base for exploring radically new technologies, which may become the game-changers of the future. FET-Proactive aims to identify the future and emerging technological paradigms with highest potential for Europe's economy and society.

The EIC Accelerator pilot aims at creating and promoting co-investment by initiating support where market response is absent and/ or insufficient. It encompasses the SME Instrument and an optional blended finance component (combining grant and equity)\(^2\). The EIC Accelerator pilot (SME Instrument) addresses SMEs with a radically new highly risky, and thus, non-bankable idea underpinned by a business plan for rolling out marketable innovation solutions and with a potential to scale up. Bankable, commercially viable projects and projects that are ready or already in the scale-up phase will be redirected towards dedicated financial instruments.

Work is ongoing for the establishment, by summer 2019, of a EIC Fund which will be responsible for the management of the equity component under the EIC Accelerator pilot. Subject to a Commission decision, an Investment Strategy will be published before the EIC Fund starts its operations.

Market-creating innovations are radically new, breakthrough products, services, processes or business models that open up new markets with the potential for rapid growth at European and global levels. Market-creating innovations take shape at the intersection between different technologies, industry sectors and scientific disciplines, linked to domains such as energy, health, ICT, space, transport and agriculture.

These schemes have been developed to support market-creating innovation more effectively.

The current programme/ projects management shall be refined to serve the purposes of the EIC efficiently. The aim is to boost current processes by bringing in top-minds with a sense of urgency and committed to making an impact. This new

\(^2\) Applicants may apply for the blended finance option following the cut-off date of 5 June 2019.
approach to programme/projects management will be run by programme managers, possibly entailing a portfolio approach, in particular under the EIC Pathfinder pilot, and will be introduced during 2019. The programme managers will be recruited as temporary Commission staff.

In addition, an EIC Pilot Advisory Board will be set up as a Commission expert group, in line with horizontal rules for establishment of such groups. Its role will be to advise the European Commission on the overall strategy and implementation of the EIC.

Efforts continue to be made to help firms receiving grants access other forms and sources of finance appropriate to their scale-up and innovation development needs, such as crowdfunding, business angel investments, venture capital and loans via InnovFin and other EU access to finance solutions under the Investment Plan for Europe or COSME or the European Structural and Investment Funds.

**Other activities under this new pilot phase include the Fast Track to Innovation (FTI) and the Horizon Prizes.**

FTI will continue to target industry-driven consortia seeking a quick market uptake of new solutions, and brings together actors with complementary backgrounds, knowledge and skills.

**EIC Horizon Prizes** will continue to boost breakthrough innovation by fostering solutions to challenges which bring major benefits to society.

The results of projects will be closely monitored. In terms of results, the Pathfinder’s aim is to build up a wide portfolio of technological gems with clear potential to make a big difference in the future. For the Accelerator, performance indicators are the number of new products, services and processes for new markets being developed, the amount of private investment attracted during and after the project, and the turnover and employment of the companies that take part. These indicators will be gauged by reporting by the projects, by links to external databases on company performance, and by assessments by outside experts. For the latter, the EIC pilot will make use of the Innovation Radar, a tool to assess the market potential of innovations and the market-readiness of innovators. The Innovation Radar will also help communicate the results to potential investors.

Applicants may wish to look at other European support networks (such as the Enterprise Europe Network) as well as at facilities funded by Horizon 2020 aimed at supporting open innovation, in particular for testing and demonstrating technologies.

---

3 Commission Decision C(2016) 3301
8 See https://www.innoradar.eu/about
(e.g. open innovation testbeds, or digital innovation hubs), or at Thematic Smart Specialisation Platforms. The use of space data from the EU’s space programmes is also encouraged.

**The EIC as an agile tool contributing to the fight against COVID and to the Green Deal priority**

As concrete follow-up to the support provided in their informal meeting on 7 April 2020 with Commissioner Gabriel by the Ministers for R&I to the first actions of the “ERAvCorona” Action Plan, in addition to an additional indicative budget of EUR 150 million for the best COVID-related applications of the EIC Accelerator March cut-off, access to EIC Phase 3 services (notably Business Acceleration Services) will be opened to EIC COVID-19 Seals of Excellence awardees, as well as to the most promising ideas identified during the PanEU Hackaton (24-26-04-2020) via the EIC Community Platform.

Moreover, in accordance with the Green Deal EU orientations, and in addition to various Green Deal related activities in both its Pathfinder and Accelerator schemes, any proposal dedicated to increase the efficiency of fossil fuels technologies or fossil fuels use submitted under the Enhanced EIC pilot calls whose deadlines occur after the 30th of June 2020 will not be funded.

---

**Note**

The EIC pilot’s actions will also connect with activities undertaken by the Eurostars-2 Programme, the European Institute of Innovation & Technology (EIT), COSME, Startup Europe, InvestHorizon, the EU’s space programmes (Copernicus and Galileo/EGNOS) and European Structural and Investment Funds (ESI Funds), including the Seal of Excellence initiative and the Thematic Smart Specialisation Platforms.

With the exception of the SME Instrument phase 1, grant beneficiaries must share research data by default, as stipulated in Article 29.3 of the Horizon 2020 Model Grant Agreement (including the creation of a Data Management Plan). Participants may opt out of these arrangements, both before and after the signature of the grant agreement. For more information, see General Annex 1 of the work programme.

---

EIC Pathfinder pilot (FET-Open)

Novel ideas for radically new technologies

H2020-FETOPEN-2018-2020

This call is reflected in this WP section for the reasons outlined in the Introduction. However, only the text of this call as included in the work programme section on Future and Emerging Technologies (FET) has legal value.
Principles and characteristics of FET-Open, and who should apply

FET-Open aims to establish European leadership in the early exploration of future technologies. It looks for opportunities of long-term benefit for citizens, the economy and society. It aims to mobilise Europe’s most creative and forward thinking researchers from all disciplines to work together and explore what may become the leading technology paradigms of the future.

FET Open supports early stage science and technology research exploring new foundations for radically new future technologies by challenging current paradigms and venturing into unknown areas. A bottom-up selection process widely open to any research idea builds up a diverse portfolio of new research directions. Early detection of promising new areas, developments and trends, along with attracting new and high-potential research and innovation players, are key factors.

FET Open combines high scientific ambition with concrete technological implications. It aims to attract interdisciplinary consortia that do not shy away from exploring connections between remote disciplines in order to open-up new and potentially game changing technological directions that FET as a whole aims to develop into the leading technology paradigms of the future, including through FET-Proactive projects and FET-Flagship initiatives. In spite of the high initial risk, the long-term impact can be enormous: these new technologies can become the core for new high-growth companies, for new industries or for radically new ways of tackling societal challenges.

The FET-Open call is a part of the European Innovation Council (EIC) pilot. It provides the EIC with a bold exploratory engine that shatters the frontiers of current thinking. All FET-Open projects, even if far from today’s markets, are full of great ideas to inspire the entrepreneurial minds that the EIC attracts. While keeping its own identity of excellence in science and technology research, the exposure of FET-Open within the EIC allows new and sometimes unexpected opportunities to be detected and picked up early on. For those cases, the FET Innovation Launchpad is designed to assist in the first steps to accelerate the real-world impact of a result from FET research – a win-win for both research and for innovation. Other parts of the EIC provide further tools for achieving high-impact on society and/or the economy. Furthermore, by being part of the EIC pilot, FET-Open participants have access to the assistance, networking and financing possibilities offered by the EIC thus further increasing the leverage and increased impact from the initial high-risk investment in FET projects.

Proposals are invited against the following topics:
**Specific Challenge**

To lay the foundations for **radically new future technologies** of any kind from visionary interdisciplinary collaborations that dissolve the traditional boundaries between sciences and disciplines, including the social sciences and humanities. This topic also encourages the driving role of new actors in research and innovation, including excellent young researchers, ambitious high-tech SMEs and first-time participants to FET under Horizon 2020 from across Europe.

**Scope**

Proposals are sought for cutting-edge **high-risk / high-impact interdisciplinary research** with all of the following essential characteristics ("FET gatekeepers"):

- **Radical vision**: the project must address a clear and radical vision, enabled by a new technology concept that challenges current paradigms. In particular, research to advance on the roadmap of a well-established technological paradigm, even if high-risk, will not be funded.

- **Breakthrough technological target**: the project must target a novel and ambitious science-to-technology breakthrough as a first proof of concept for its vision. In particular, blue-sky exploratory research without a clear technological objective will not be funded.

- **Ambitious interdisciplinary research** for achieving the technological breakthrough and that opens up new areas of investigation. In particular, projects with only low-risk incremental research, even if interdisciplinary, will not be funded.

The inherently high risks of the research proposed shall be mitigated by a flexible methodology to deal with the considerable science-and-technology uncertainties and for choosing alternative directions and options.

The Commission considers that proposals requesting a contribution from the EU of up to €3 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

**Expected impact**

- Scientific and technological contributions to the foundation of a new future technology.

- Potential for future social or economic impact or market creation.

- Building leading research and innovation capacity across Europe by involvement of key actors that can make a difference in the future, for example excellent young researchers, ambitious high-tech SMEs or first-time
participants to FET under participants to FET under Horizon 2020\textsuperscript{10}.

**Type of action**

_The conditions related to this topic are provided at the end of this call and in the General Annexes._

---

**FET-Open Coordination and Support Actions**

**FETOPEN-02-2018**

---

**Specific Challenge**

To promote excellent collaborative research and innovation on future and emerging technologies to secure and renew the basis for future European competitiveness and growth, and that will make a difference for society in the decades to come.

**Scope**

Proposals for Coordination and Support Actions (CSA) should be driven by relevant actors in the research field and address only one of the following sub-topics:

a) **FET Communication and Outreach**
Support communication activities on the FET programme and its achievements and outreach actions targeting a wide range of audiences including the general public, and going well beyond the world of academia and research. This shall stimulate the emergence of a FET community and its connection to relevant multipliers and other stakeholder networks. The activities shall use a diversity of channels and interventions (for example news items, social media, interviews, workshops, exhibitions, competitions, code camps and participatory actions for wider engagement).

b) **FET Innovation**
Stimulate the impact on innovation from FET-funded research and improving the innovation readiness levels of FET results, for example by providing a kind of “market place” for FET technologies, by connecting the world of research with that of potential users, technology leaders, technology transfer organisations, entrepreneurs, investors or alternative financing channels.

c) **FET Observatory**
Ongoing and systematic identification of new and emerging technologies from FET portfolio analysis, trends analysis (using for instance bibliometric tools, media watch, consultations and workshops) and broader horizon scanning (beyond research),

\textsuperscript{10} First time participation here refers to the individuals involved, not their institution or organisation.
including also consideration of ethical implications, gender differences and long-term impacts on society and humankind.

Specificity to the nature of FET is a must (e.g., upstream positioning, interdisciplinarity, high-risk, novelty, long-term impact...).

The Commission considers that proposals requesting a contribution from the EU of up to € 0.5 million (and up to 0.7 million for a.) would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

**Expected impact**

- Strengthening globally recognised European leadership in the early exploration of visionary, new and emerging technologies and with a strong engagement of scientists, citizens, innovators and policy makers.
- Improved long-term innovation potential in Europe both from the abundance of novel ideas and the range of actors ready to take them forward.
- Improved readiness across Europe to engage in inter-disciplinary research collaboration and to take up new, open and responsible research and innovation practices, with due attention to aspects such as education, gender differences and long-term societal, ethical and legal implications.

**Type of action**

Coordination and support action

*The conditions related to this topic are provided at the end of this call and in the General Annexes.*

---

**FET Innovation Launchpad**

FETOPEN-03-2018-2019-2020

**Specific Challenge**

This topic aims at turning results from FET-funded projects into genuine societal or economic innovations.

**Scope**

Short individual or collaborative actions focused on the non-scientific aspects and the early stages of turning a result of an ongoing or recently finished project funded
through FET under FP7 or Horizon 2020 into a genuine innovation with socio-economic impacts. The precise link with the relevant FET project and the specific result for which a FET Innovation Launchpad proposal is intended, are to be explicitly described in the proposal. This topic does not fund research or activities that are/were already foreseen in the original FET project. Activities proposed should reflect the level of maturity of the result to be taken up. They can include the definition of a commercialisation process, market and competitiveness analysis, technology assessment, verification of innovation potential, consolidation of intellectual property rights, business case development. Proposals can include activities with, for instance, partners for technology transfer, licence-takers, investors and other sources of financing, societal organisations or potential end-users. Limited low-risk technology development (for instance for demonstration, testing or minor adjustment to specific requirements) can be supported as long as it has a clear and necessary role in the broader proposed innovation strategy and plan.

The Commission considers that proposals for actions no longer than 18 months and requesting a contribution from the EU of up to € 0.1 million would allow this specific challenge to be addressed appropriately. For grants awarded under this topic as a result of proposals submitted as of 9 October 2019, the costs will be declared based on the lump sums of a fixed total amount of EUR 0.1 million for each grant, as authorised by decision of the authorizing officer responsible. Details of the lump sum funding pilot scheme are published on the Funding & Tenders Portal together with the specific Model Grant Agreement for Lump Sums applicable.

**Expected impact**

- Increased value creation from FET projects by picking up innovation opportunities.
- Improved societal and market acceptance of concrete high-potential innovations from FET projects.
- Stimulating, supporting and rewarding an open and proactive mind-set towards exploitation beyond the research world.
- Contributing to the competitiveness of European industry/economy by seeding future growth and the creation of jobs from FET research.

**Type of action**

Coordination and support action, Coordination and support action Lump sum.

*The conditions related to this topic are provided at the end of this call and in the General Annexes.*

---

11 Research and Innovation Actions funded under any call in the FET work programmes under Horizon 2020 for 2014-2015, for 2016-2017, and for 2018-2019-2020; projects funded under the FET part of any of the LEIT-ICT work programmes under FP7. See the Call Conditions for specific eligibility conditions.

\textsuperscript{13} The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening. The Director-General responsible may delay the deadline(s) by up to two months. The budget amounts for the 2020 budget are subject to the availability of the appropriations provided for in the draft budget for 2020 after the adoption of the budget 2020 by the budgetary authority or, if the budget is not adopted, as provided for in the system of provisional twelfths.
The call opens at 17.00.00 Brussels local time on the opening date.

The total indicative budget for the FET-Open topic FETOPEN-01-2018-2019-2020 is EUR 641.20 million. The indicative funding budgets available per cut-off date for this topic are as follows:

1. Cut-off date 16/05/2018: €123.70 million
2. Cut-off date 24/01/2019: €160.65 million
3. Cut-off date 18/09/2019: €160.65 million
4. Cut-off date 13/05/2020: €196.20 million

€57.50 million from the 2018 budget will be used to fund in part the last cut-off of the Horizon 2020 FETOPEN-2016-2017 call under the FET work-programme 2016-2017.

**Indicative timetable for evaluation and grant agreement signature**

For single stage procedure:

- Information on the outcome of the evaluation: Maximum 5 months from the final date for submission; and

- Indicative date for the signing of grant agreements: Maximum 8 months from the final date for submission.
Eligibility and admissibility conditions

The conditions are described in General Annexes B and C of the work programme. The following exceptions apply:

| FETOPEN-03-2018-2019-2020 | Proposals must build on results from an ongoing or recently finished project, funded as a result of call in any FET topic under FP7 or Horizon 2020 and clearly identified in the proposal. For a project to be considered "recently finished" in the context of this call topic its actual end date must be at most one year before the deadline for proposal submission to this topic. For a project to be considered "ongoing" in the context of this call topic the deadline for proposal submission to this topic must be within the period limited by the contractual start date and end date of the project.

Proposals must include a declaration by the coordinator of the necessary rights and ownership of results to be exploited, as described in the proposal. Applicants that are not the owner of the result to be taken up in the proposal must provide a letter from the relevant beneficiary or beneficiaries of the previous FET project that own(s) the result that confirms the existence of the necessary agreements with the coordinator of the current proposal, including on IPR. |

Evaluation criteria, scoring and threshold

The criteria, scoring and threshold are described in General Annex H of the work programme. The following exceptions apply:

Adherence to the "FET gatekeepers" as described in the call text:

- Clarity of the radical vision of a science-enabled technology and its differentiation from current paradigms.
- Novelty and ambition of the proposed science-to-technology breakthrough that addresses this vision.
- Range of and added value from interdisciplinarity for opening up new areas of research; non-incrementality of the research proposed. |
<table>
<thead>
<tr>
<th>High-risk, plausibility and flexibility of the research approach.</th>
</tr>
</thead>
<tbody>
<tr>

<th>Evaluation Procedure</th>
<th>The procedure for setting a priority order for proposals with the same score is given in General Annex H of the work programme. The following exceptions apply:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>FETOPEN-01-2018-2019-2020</strong></td>
<td>The following specific page limits apply. Sections 1 to 3 of the Part B of the proposal should consist of a maximum of 15 A4 pages. The limits will be clearly shown in the &quot;proposal templates&quot; in the Funding &amp; Tenders Portal electronic submission system. Sections that are not subject to limits will be indicated.</td>
</tr>
<tr>
<td></td>
<td>A proposal that, according to the evaluator's assessments, does not convincingly satisfy all FET gatekeepers as described under this topic will be declared out of scope. The communication to the applications will include the evaluators' assessments, or relevant extracts from them.</td>
</tr>
</tbody>
</table>
At consensus stage, the consensus score for each evaluation criteria will be the median of the corresponding scores attributed by the individual evaluators. The consensus report will comprise a collation of the comments from individual reports, or extracts from them. The final review panel will decide on the final score based on its consensus discussions. The panel will also decide on any additional comments, possibly including advice not to resubmit the proposal.

| FETOPEN-02-2018 | Grants will be awarded to proposals according to the ranking list. However, in order to ensure a balanced portfolio of supported actions, at least the highest-ranked proposal per sub-topic will be funded provided that it attains all thresholds. |

| FETOPEN-03-2018-2019-2020 | The following specific page limits apply. Sections 1 to 3 of the Part B of the proposal should consist of a maximum of 7 A4 pages. The limits will be clearly shown in the "proposal templates" in the Funding & Tenders Portal electronic submission system. Sections that are not subject to limits will be indicated. At consensus stage, the consensus score for each evaluation criteria will be the median of the corresponding scores attributed by the individual evaluators. The consensus report will comprise a collation of the comments from individual reports, or extracts from them. The final review panel will decide on the final score based on its consensus discussions. The panel will also decide on any additional comments, possibly including advice not to resubmit the proposal. For deciding the priority order for proposals with the same score, the procedure for Innovation actions will apply. |

The full evaluation procedure is described in the relevant guide published on the Funding & Tenders Portal.

**Grant Conditions**

| FETOPEN-03-2018-2019-2020 | For grants awarded under this topic as a result of proposals submitted as of 9 October 2019, the costs will be declared based on lump sums of a fixed total amount of EUR 0.1 million per grant, |
Details of the lump sum funding pilot scheme are published on the [Funding & Tenders Portal](#) together with the specific [Model Grant Agreement for Lump Sums](#) applicable.

**Consortium agreement**

| FETOPEN-01-2018-2019-2020 | Members of consortium are required to conclude a consortium agreement, in principle prior to the signature of the grant agreement. |

---

FET Proactive aims to identify the future and emerging technological paradigms with highest potential for Europe’s economy and society. For each of them, it looks to establish a broad and solid European basis in terms of knowledge, key technological building blocks and interdisciplinary communities. By reaching out well beyond the research world, it ensures that Europe has the best ‘first mover’ position to capitalise rapidly and effectively on emerging societal and industrial opportunities.

---

15 The FET-Proactive topics under the call 2019 are detailed under the Enhanced EIC pilot. The FET-Proactive topics of 2020 calls will be detailed in the FET Work Programme and are included in this work programme section for information. Only the 2020 FET-Proactive topics as included in the work programme section on Future and Emerging Technologies (FET) have legal value. However, all topics mentioned below are part of the Enhanced EIC pilot.
FET Proactive: emerging paradigms and communities

Specific Challenge: To explore and consolidate a new technological direction in order to put it firmly on the map as a viable paradigm for future technology. To foster the interdisciplinary communities that are able to drive this forward, extending from the participating consortia to a wider European pool of expertise. To stimulate the emergence of a European innovation eco-system around a new technological paradigm, well beyond the world of research alone.

Scope: proposals are sought for cutting-edge high-risk / high-reward research and innovation projects that aim to demonstrate a new technological paradigm within the scope of one of the following sub-topics:

a. Human-Centric AI. Artificial intelligence (AI) is gaining more and more footholds in various aspects of our life. However, machine learning algorithms are difficult to understand, opaque and may have implicit biases in their decision making. Explicability has become an essential element if users are to trust, accept and adopt the next generation of intelligent machines on a wider scale. This initiative seeks to advance to the next AI frontier with verifiable, evidence-based features of trustworthiness (i.e., reliable and unbiased alignment of values, goals and beliefs) and transparency (explainable performance), exploring radically new approaches (e.g., inspired from neuro-science, cognition or social science). For instance, explanation could be more tightly intertwined with the decision making process itself so that decisions can be challenged, interpreted, refined and adjusted through mutual exchange, introspection (e.g., self-awareness of biases, reflecting on the internal functioning of the learning system, or on what caused a wrong or unacceptable decision) and active learning of both system and user, for example through dialogue or other forms of multi-modal interaction aimed at establishing mutual trust. New data collection and ownership/governance models that go beyond the dominant off-line and centralised data processing should be investigated, and new avenues, such as for incremental, unsupervised, active, one-shot and ‘small data’ machine learning, should be explored. The projects are expected to contribute to the wider debate on the sociotechnical, organisational and AI-ethical dimensions of such technologies and systems, and link to the ‘Commission’s broader AI strategy’.

b. Implantable autonomous devices and materials. Radically new biomedical technologies that will lead to enhanced life quality for people are urgently needed, particularly for mitigating the impact of chronic health conditions that are placing a rapidly growing and ultimately unsustainable burden on healthcare systems. A key goal will be to demonstrate dramatically extended functional lifetimes of implantable devices, for example, through

---

16 This topic is part of the European Innovation Council Enhanced Pilot (2019-2020) and funded from budget line 08.020102. In accordance with article 6.5 of Horizon 2020 regulation No 1291/2013, credits from budget line 08.020202 will be transferred to budget line 08.020102.

incorporation of smart sensing, self-awareness, adaptation (form and/or function) and self-repair capabilities. Included are mobile micro/nano devices based on biological models that can perform advanced functions e.g. site specific automigration, ability to distinguish tissue types (diseased, normal) and perform highly localised actions (e.g., delivery of therapeutic agents). Entities incorporating (bio)materials that provide instances of totally autonomous biomimetic behaviour and in-situ integration and adaptation are particularly welcome, such as an ability to blend-in with the native biological environment, to independently generate power, synthesise active agents or sense and respond to changes in the local molecular environment. Work on ethical implications should be included.

c. Breakthrough zero-emissions energy generation for full decarbonization. Clean and sustainable energy is one of the major challenges of our time. This sub-topic aims at the multidisciplinary exploration of new directions (starting from TRL 1-3) for power generation that is clean, compact and low-cost, aimed at stand-alone, mobile or portable uses in specific application contexts, for instance, in the transport sector (road, air, sea and either for motive or auxiliary needs), for portable uses, in remote places or in emergency situations. Breakthrough concepts and techniques for energy generation have to be explored for generating heat and/or electricity efficiently with zero emissions and with a minimal use of rare or toxic materials. Research areas could include, for example, long duration high heat sources from hydrogen-metal systems (e.g., using nickel), energy generation in plasma and cavitation systems. These or any other concepts with similar compact, high energy density and low-cost energy generation capabilities should be harnessed to make them usable for specific application contexts. Clear and ambitious performance targets and milestones to achieve them shall be provided.

FET Proactive projects should establish a solid baseline of knowledge and skills and assemble the interdisciplinary communities around them. They should further foster the emergence of a broader innovation ecosystem and create a fertile ground for future take-up of its new technological paradigm (e.g., public engagement, informal education, policy debate).

The Commission considers that proposals requesting a contribution from the EU of up to EUR 4 million and with a duration of up to 4 years would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts or duration.

This topic allows for the provision of financial support to third parties established in an EU member state or country associated with Horizon 2020 in line with the conditions set out in General Annex K, either to enhance impacts through punctual small scale experimentation and use of project results by third parties, or to award a prize following a contest organised by the beneficiaries.

Expected Impact:
• Scientific and technological contributions to the foundation and consolidation of a radically new future technology.

• Potential for future returns in terms of societal or economic innovation or market creation.

• Spreading excellence and building leading innovation capacity across Europe by involvement of key actors that can make a difference in the future, for example excellent young, researchers, ambitious high-tech SMEs or first-time participants to FET under Horizon 2020\textsuperscript{18}.

• Build-up of a goal oriented interdisciplinary community (within and beyond the consortium).

• Emergence of an innovation ecosystem around a future technology in the theme addressed from outreach to and partnership with high potential actors in research and innovation, and from wider stakeholder/public engagement, with due consideration of aspects such as education, gender differences and long-term societal, ethical and legal implications.

**Type of action:** Research and Innovation action

*The conditions related to this topic are provided at the end of this call and in the General Annexes.*

\textsuperscript{18} First time participation here refers to the individuals involved, not to their institution or organisation.
**EIC Transition to Innovation Activities**\(^{19}\)

**FETPROACT-EIC-06-2019**

**Specific Challenge:** to turn promising results from FET-funded projects into genuine technological or societal breakthrough and disruptive innovations. Since the typical researchers' mind-set is to identify further opportunities for research, promising research results that could be the basis for breakthrough and disruptive innovation risk to remain unexploited. The challenge is to create a fertile ground for those results to mature, to a level where exploitation and investment opportunities can start to be discussed, and ultimately towards future market uptake. While recognising that this may still take further research and development, it is crucial to complement research excellence with a focus on entrepreneurial ambition and commitment at an early stage.

**Scope:** The EIC Transition Activities pilot aims at bringing promising technologies as they are at the end of a typical FET-Open or FET Proactive project (i.e., TRL 2/3) to a level of development, validation and demonstration where they become a credible basis for entrepreneurship, business creation, investment and, ultimately, economic and/or societal returns. The project shall be driven by a partner with the vision, ambition and commitment to bring the technology to actual use (possibly through the creation of a start-up or spin-off).

Proposals must build on results from an ongoing or finished project (Research and Innovation Action), funded as a result of a FET-Open or FET Proactive call under Horizon 2020\(^{20}\). The targeted technology should be in one of the following areas:

- Micro- and Nano-technologies;
- Artificial Intelligence and advanced robotics;
- Technologies for the life sciences, health and treatment;
- Low-carbon energy and climate change technologies;
- Interaction technologies (including virtual-, augmented- and mixed reality, ...).

The precise link(s) with the relevant FET project(s) is to be explicitly described in the proposal. This topic does not fund research or activities that are/were already foreseen in the original FET project(s).

Participants must have essential capabilities to increase the maturity of the targeted technology. Activities proposed should reflect the level of maturity of the result to be taken

---

\(^{19}\)This topic is part of the European Innovation Council Enhanced Pilot (2019-2020) and funded from budget line 08.020102. In accordance with article 6.5 of Horizon 2020 regulation No 1291/2013, credits from budget line 08.020202 will be transferred to budget line 08.020102.

up. Proposals can include activities with, for instance, partners for technology transfer, licence-takers, investors and other sources of financing, user/client organisations or potential end-users.

Proposals should specify the intended outcome(s) of the project and describe its key performance indicators/success criteria. Proposals must also include an exploitation plan describing the market or societal potential (potential users/customers and benefits for them; targeted European/global markets, etc.), measures to enhance the probability of take-up and a credible development strategy that identifies next steps, possibly using the services and funding/financing opportunities offered in the context of the EIC Accelerator pilot. Particular attention should be paid to IP protection and ownership and to the possibility of commercial exploitation (‘freedom to operate’).

The Commission considers that proposals for actions up to 24 months and requesting a contribution from the EU of between EUR 1.00 and 2.00 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact:

- Increased value creation from FET projects and contributing to the competitiveness of European industry/economy by developing further promising technologies and innovation opportunities.

- Fast development, demonstration and economical/societal take-up of promising FET technologies.

- Increased H2020 first time participation of high tech SMEs (including Spin-offs and Start-ups) and industry.

- Leveraging more private investment into research and/or innovation.

Type of action: Research and Innovation action

*The conditions related to this topic are provided at the end of this call and in the General Annexes.*
FET Proactive: emerging paradigms and communities

FETPROACT-EIC-07-2020

Specific Challenge: To explore and consolidate a new technological direction in order to put it firmly on the map as a viable paradigm for future technology. To foster the interdisciplinary communities that are able to drive this forward, extending from the participating consortia to a wider European pool of expertise. To stimulate the emergence of a European innovation eco-system around a new technological paradigm, well beyond the world of research alone.

Scope: proposals are sought for cutting-edge high-risk / high-reward research and innovation projects that aim to demonstrate a new technological paradigm within the scope of one of the following sub-topics:

a. Artificial Intelligence for extended social interaction. This sub-topic explores the combination of new Artificial Intelligence and immersive interaction technologies to enhance the social dimension in future virtual social spaces. It aims to lay the basis for a new flavour of social media in which Europe can mark a difference. In 10-15 years from now, Virtual, Augmented and Mixed Reality (eXtended Reality, XR) will be as ubiquitous as Smart Phones are today leading to new kinds of social media in which , on the one hand, interaction with others will become more natural while, on the other hand, entirely new experiences and ways of sharing become possible. The sub-topic addresses the redefinition of a person’s social interaction space in light of increasing virtualisation, unprecedented social scale, information load and ubiquitous intelligence, leading to currently acute issues of trust, the nature of social relationships (beyond ‘friends’ and ‘followers’), believe formation, crowd- and organisation dynamics, the permeation of private and public spheres, or social exclusion and divides, among others. New human-centric and responsible Artificial Intelligence technologies can address these by bringing more social intelligence in the interaction environment and greater user-, contextual- and social awareness, and also through a tighter coupling with sensori/motor- and cognitive processes using, for instance, multimodal XR setups, or minimally invasive interfaces like spatial audio, smart skins, haptics, robotic devices and wearables. Projects will also investigate whether and how the perceptual- and sociocultural parameters implicit in natural, context-rich social interaction carry over to such virtual or hybrid settings. Influence on self-perception, well-being (addiction), acceptance, learning and brain-development/adaptation should also be considered, especially in scenarios of extensive and always-on use. Ethics, age and gender differences, safety and health should be taken into account.

b. Breakthrough zero-emissions energy storage and conversion technologies for carbon-neutrality. Provisioning clean and sustainable energy is one of the major challenges for Europe
to meet its climate ambition. This sub-topic aims at multidisciplinary research (starting from TRL 1-3) for breakthroughs in energy storage and conversation that is clean, compact and ultimately low-cost, aimed at decentralised, mobile or portable uses in specific application contexts, for instance, in industry as substitutes to fossil fuels or raw materials for chemistry, in the transport sector (road, air, water and either for motive or auxiliary needs), for portable uses, in sustainable housing, remote places or in emergency situations. Novel concepts and breakthrough techniques with zero emissions of greenhouse gasses and a minimal use of rare or toxic materials have to be explored. Research areas could include storage and conversion of clean energy (e.g., solar, wind, geothermal), solar fuels and solar chemicals, possibly based on recycled and atmospheric CO2 or other. Research on electro-chemical batteries is not addressing this sub-topic. Where relevant, circular design and/or high degree of recyclability must be addressed. Clear and ambitious performance targets and milestones to achieve them shall be provided.

c. Digital twins for the life-sciences. The sub-topic aims at the close integration and real-time interaction of computational models of biological structures and systems (from biochemical pathways to cells, tissues, organs and individuals), with non-destructive analysis, advanced imaging and, sensing techniques for such biological systems, mechanisms and processes. It extends concepts and technologies of digital twins beyond their industrial versions, which are typically supporting the life-cycle of engineered products, into the domain of the life sciences. The core challenge is to derive and update the digital twin from longitudinal and individual data, and using information from the cutting-edge non-destructive analysis, imaging, sensing and monitoring of its biological counterpart, using advanced Artificial Intelligence techniques and taking the achievements of systems biology, mechanobiology, metabolomics and systems medicine into account. This can be done in vivo at whole-body (e.g., using wearable and implantable sensors) or organ level or in vitro (e.g., for interacting cells and organoids, 3D cell co-cultures, organ/body-on-chip). A further challenge is to include dynamics at multiple spatio-temporal scales (e.g. for deriving predictive values or simulating adaptation processes, or by evolving the twin itself into a better model through evolutionary or adaptive AI techniques), through new principles of molecular mapping, imaging, sensing and data analysis or Artificial Intelligence that take the time-dimension into account. Biological dynamics can be observed in the non-manipulated state (normal, diseased) or under manipulation (altered, perturbed, diseased) by chemical, biological or physical interventions such as gene-editing, pharmaceuticals, viruses, acoustic waves, electromagnetic fields, light, forces, or altered temperature. This will offer unprecedented insights into the molecular, cellular and extra-cellular dynamics underlying human disorders such as development, metabolic, cardiovascular, neurological, oncological or rare pathologies, where personalised precision medicines and advanced diagnostic and therapeutic approaches but also prevention measures (lifestyle, nutrition, environmental factors) are needed to make healthcare more effective, more convenient, cheaper and uniquely tailored to each patient. Work on ethical implications should be included.
d. Measuring the unmeasurable — Sub-nanoscale science for Nanometry. This sub-topic seeks to find and test new approaches for nano- and sub-nano metrology. Proposals should target new techniques, for example, physics-, biochemistry- and chemistry-based methods incorporating nano- and picometre-length scales in the spatial domain with femto- and atto-seconds in the temporal domain. The proposal must address research from a novel measurement concept up to a technique and/or method including prototype measuring devices/setups and procedures, and sound metrological aspects like quantification of uncertainty or traceability. Proposals should seek to approach theoretical limits in challenging domains (physical, chemical, biological) while minimising any potential damage or change to the object being measured. Full three-dimensional characterisation (tomography) or the application of metrological procedures to transient phenomena on a sub-nanosecond time-scale could push the limits in metrology. Research on refining existing techniques is excluded. Proposals will address emerging issues of nano-metrology in spatial and temporal dimensions, including for example morphology, composition, reactivity, energy, dynamics or relevant optical, electronic, chemical and biochemical properties. Challenges in measurement that could be used as test cases are, e.g., understanding and controlling changing morphology impacting chemical properties in nano-photonic devices or battery electrodes; integrating metrology with sub-nanoprinting, nano-engineering or self-characterisation techniques; the measurements of heat transfer across interfaces down to the atomic size level; or the characterisation of the dynamics of molecular interactions in or with biological systems for health or smart materials. The use of advanced modelling, statistical methods, big data and machine learning methods is welcome where appropriate.

Projects should establish a solid baseline of knowledge and skills and assemble the interdisciplinary communities around them, including from the social sciences and humanities. They should further foster the emergence of a broader innovation ecosystem and create a fertile ground for co-design of the new technological paradigm and its future take-up (e.g., wider stakeholder/public engagement, informal education, policy debate), in line with the discussion on Responsible Research and Innovation (RRI) in the introduction of the FET part of the work programme.22

The Commission considers that proposals requesting a contribution from the EU of EUR 4 to 4.50 million and with a duration of up to 4 years would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts or project duration.

This topic allows for the provision of financial support to third parties established in an EU member state or country associated with Horizon 2020 in line with the conditions set out in

---

22 'RRI ensures that projects are ethically founded and societally anchored. RRI is based on outreach to and partnership with potential actors in research and innovation, and from wider stakeholder/public engagement, to maximise the relevance of shared knowledge developed and viability of cooperation. RRI also includes due consideration of aspects such as education, gender differences and long-term societal, ethical and legal implications.' *H2020 has invested in an RRI Toolkit (available at: https://www.rri-tools.eu/), Responsibility Navigator (available at: http://responsibility-navigator.eu/), and RRI Indicator System (available at: https://ec.europa.eu/research/swafs/pdf/pub_rri/rri_indicators_final_version.pdf; and also with research from the MoRRI project, available at: http://www.technopolis-group.com/mori/).*
General Annex K, either to enhance impacts through punctual small scale experimentation and use of project results by third parties, or to award a prize following a contest organised by the beneficiaries.

Expected Impact:

- Scientific and technological contributions to the foundation and consolidation of a radically new future technology.
- Potential for future returns in terms of societal or economic innovation or market creation.
- Spreading excellence and building leading innovation capacity across Europe by involvement of key actors that can make a difference in the future, for example excellent young, researchers, ambitious high-tech SMEs or first-time participants to FET under Horizon 2020.
- Build-up of a goal oriented interdisciplinary community (within and beyond the consortium).
- Emergence of an innovation ecosystem around a future technology in the theme addressed from outreach to and partnership with high potential actors in research and innovation, and from wider stakeholder/public engagement, with due consideration of aspects such as education, gender differences and long-term societal, ethical and legal implications.

Type of Action: Research and Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

23 First time participation here refers to the individuals involved, not to their institution or organisation.
FET Proactive: Environmental Intelligence

FETPROACT-EIC-08-2020

Specific Challenge: new synergies between the distant disciplines of environmental modelling, advanced sensor research, social sciences, and Artificial Intelligence can lead to radically new approaches for creating and using dynamic models of the environment, including predictive modelling, scenario testing and real-time tracking. The ultimate goal is to build a systemic understanding of the socio-environmental inter-relationships, for instance to regulate or design policies and incentives for environmental sustainability and to track their effectiveness over time and to provide intelligible options for adjusting them.

Scope: Proposals are expected to have their main focus in only one of the following sub-topics:

a. new techniques for modelling and predicting social/environmental evolution across different temporal and spatial scales. These will combine, analyse and interpret data from in-situ and remote (e.g., satellite) sensing technologies, other public data sources (e.g., historical data, planning documents, legislation), and data or models/theories from human behaviour (including gender differences), economics and the social sciences by making recourse to advanced artificial intelligence techniques, if/as needed. The focus is on modelling and tracking of the interplay between natural and societal systems, for example on how policies and economics modelling predict human behaviours’ impact on the environment, how explicit or implicit incentives and social norms interact with the environment’s evolution and exploitation, how real-time environmental awareness and intelligence can improve behaviour towards more sustainability, or how the decisions based on changes in the environment in turn affect the state of the natural environment.

b. radically novel approaches to resilient, reliable and environmentally responsible in-situ monitoring. In-situ sensing technologies (physical, chemical, biological, behavioural) for environmental monitoring, in particular favouring sensors for parameters and environments that are currently under-sampled but at the same time critical for improving predictive models for understanding environmental processes. Proposals should look for ground-breaking concepts of affordable sensor design and deployment, maintenance, retrieval and/or recycling based on concepts such as self-deployment, self-awareness, adaptation, artificial evolution, self-repair and controlled decomposition; or using edge computing, distributed Artificial Intelligence or new concepts from micro-robotics to optimise sensing or monitoring frequency. Advanced research on the networking aspects is not addressing this sub-topic.

Projects are to focus on one or a few critical resources (e.g., water, air) and to establish fundamental advances on the most critical challenges that will underpin a step improvement.

---

24 This topic is part of the European Innovation Council (EIC) Enhanced Pilot (Horizon 2020, 2019-2020). This topic and the associated call conditions are included in this work programme section for information only. Only the 2020 FET-Proactive topics as included in the work programme section on Future and Emerging Technologies (FET) have legal value.
in monitoring, analysis and management of important social/environmental processes for improving quality of life and environmental sustainability (possibly including aspects of waste, noise, ...). Citizen involvement, for example for prioritizing resource challenges, data collection, raising awareness towards environmental issues or better understanding of behavioural change in relation to environmental sustainability, is encouraged, in line with the discussion on Responsible Research and Innovation (RRI) in the introduction of the FET part of the work programme.\footnote{25} The collected and simulated data should adhere to the FAIR data principle and, where relevant, be compliant with European Standards.

Selected projects under this topic will be expected to collaborate, jointly aiming at delivering a blueprint for a full-fledged system for environmental intelligence.

The Commission considers that proposals requesting a contribution from the EU of up to EUR 4 million and with a duration of up to 4 years would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts or project duration.

**Expected Impact:**

- Enabling new approaches to monitoring, analysis and management of critical resources in Europe;
- Availability of reliable data and models at multiple levels of granularity for environmental policy making;
- Reduced environmental footprint for environmental ICT;
- Increased local and citizen awareness of environmental impacts.

**Type of Action:** Research and Innovation action

*The conditions related to this topic are provided at the end of this call and in the General Annexes.*

From the budget for FETPROACT-EIC-05-2019, at least EUR 35.40 million and up to EUR 52.40 million will be allocated to sub-topic ‘c. Breakthrough zero-emissions energy generation for full decarbonisation’.

From the budget for FETPROACT-EIC-06-2019, at least EUR 10.00 million and up to EUR 13.00 million will be allocated to area ‘Low-carbon energy and climate change technologies’.

From the budget for FETPROACT-EIC-07-2020, at least EUR 12 million will be allocated to each of the sub-topics ‘a. Artificial Intelligence for extended social interaction’, ‘b. Breakthrough zero-emissions energy generation for full decarbonisation’.

---

26 The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening. The Director-General responsible may delay the deadline(s) by up to two months. All deadlines are at 17.00.00 Brussels local time. The budget amounts for the 2020 budget are subject to the availability of the appropriations provided for in the draft budget for 2020 after the adoption of the budget 2020 by the budgetary authority or, if the budget is not adopted, as provided for in the system of provisional twelfths. Any call conditions for this topic are included in this work programme section for information. Only the call conditions in the work programme section on Future and Emerging Technologies (FET) have legal value.

27 Any call conditions for this topic are included in this work programme section for information. Only the call conditions in the work programme section on Future and Emerging Technologies (FET) have legal value.
energy storage and conversion technologies for carbon-neutrality' and ‘c. Digital twins for the lifeosciences’.

**Indicative timetable for evaluation and grant agreement signature**

For single stage procedure:

- Information on the outcome of the evaluation: Maximum 5 months from the final date for submission; and
- Indicative date for the signing of grant agreements: Maximum 8 months from the final date for submission.

**Eligibility and admissibility conditions**

The conditions are described in General Annexes B and C of the work programme. The following exceptions apply:

| FETPROACT-EIC-06-2019 | Proposals must build on results from an ongoing or finished project, funded as a result of call in any FET topic under Horizon 2020 and clearly identified in the proposal. Proposals must include a declaration by the coordinator of the necessary rights and ownership of results to be exploited, as described in the proposal. Applicants that are not the owner of the result to be further developed in the proposal must provide a letter from the relevant beneficiary or beneficiaries of the previous FET project that own(s) the result that confirms the existence of the necessary agreements with the coordinator of the current proposal, including on IPR. |

**Evaluation criteria, scoring and threshold**

The criteria, scoring and threshold are described in General Annex H of the work programme. The following exceptions apply:

29 Any call conditions for this topic are included in this work programme section for information. Only the call conditions in the work programme section on Future and Emerging Technologies (FET) have legal value.
| FETPROACT-EIC-08-2020<sup>30</sup> | • Concreteness and ambition of the proposed science-to-technology breakthrough.  
• Range and added value from interdisciplinarity, novelty and non-incrementality of the research proposed.  
• High-risk of the research proposed and plausibility and flexibility of the approach.  

Threshold: 4/5, Weight: 60%  

Impact  
• The extent to which the outputs of the project would contribute to the expected impacts mentioned in the work programme under the relevant FET topic.  
• Effectiveness of measures and plans to disseminate and use the results (including management of IPR) and to communicate the project to different target audiences.  

Threshold: 3.5/5, Weight: 20%  

Quality and efficiency of the implementation  
The following aspects are taken into account:  
• Coherence and effectiveness of the work plan to achieve project objectives and impacts, including adequate allocation of resources to tasks and partners.  
• Appropriateness of the research and innovation management structures and procedures.  
• Role and complementarity of the participants and extent to which the consortium as a whole brings together the necessary expertise.  

Threshold: 3/5, Weight: 20%  

| FETPROACT-EIC-06-2019 | Excellence  
The following aspects are taken into account:  

---

<sup>30</sup> Any call conditions for this topic are included in this work programme section for information. Only the call conditions in the work programme section on Future and Emerging Technologies (FET) have legal value.
• Clarity, quality and level of ambition of the innovation idea and its link with the vision and results of the previous or ongoing FET project, as indicated in the proposal.

• Concreteness of the research and innovation objectives and intended outcomes, and their pertinence for moving results of the previous FET research to a level of development, validation and demonstration where they become a credible basis for entrepreneurship, business creation, investment and, ultimately, economic and/or societal returns.

• Suitability and necessity of the proposed research and innovation activities to reach the stated objectives, including their complementarity to actions already foreseen or expected from the previous or ongoing FET project.

**Threshold: 4/5, Weight: 40%**

**Impact**

Contributions to the impacts listed under this topic in the work programme:

• Added innovation potential with respect to the FET project from which this innovation originates.

• Extent of economic and/or societal benefits resulting from this innovation; clarity, concreteness and credibility of the proposed exploitation strategy and next steps.

• Suitability of innovation measures to enhance the probability of success, including through engagement with prospective exploitation partners, other stakeholders, users or society.

**Threshold: 4/5, Weight: 40%**

**Quality and efficiency of the implementation**

The following aspects are taken into account:

• Quality of work plan and management (including IP protection, ownership and freedom to operate).
• Ambition and commitment from at least one partner driving the technology to actual use.
• Relevance of expertise in the consortium to reach the research and innovation objectives.
• Appropriate allocation of resources (person-months).

Threshold: 3/5, Weight: 20%

**Evaluation Procedure**

The procedure for setting a priority order for proposals with the same score is given in General Annex H of the work programme. The following exceptions apply:

<table>
<thead>
<tr>
<th>FETPROACT-EIC-05-2019, FETPROACT-EIC-06-2019; FETPROACT-EIC-08-2020(^{31})</th>
<th>Grants will be awarded to proposals according to the ranking list. At least each of the two highest-ranked proposals for each sub-topic or area will be funded provided that it attains all thresholds. Then, respecting the ranking, the third ranked proposals (if any) from each sub-topic or area is awarded within available funding budget. Finally, any remaining funding budget is allocated according to the ranking list, respecting where applicable the minimal and maximal budget allocation per sub-topic or area.</th>

\(^{32}\) Any call conditions for this topic are included in this work programme section for information. Only the call conditions in the work programme section on Future and Emerging Technologies (FET) have legal value.
The full evaluation procedure is described in the relevant guide published on the Funding & Tenders Portal.

**Grant Conditions**

**FETPROACT-EIC-05-2019, FETPROACT-EIC-07-2020**

For grants awarded under this topic, beneficiaries may provide support to third parties established in an EU member state or country associated with Horizon 2020 and as described in General Annex K of the Work Programme either in form of grants or prizes and within the limitations as described in the call text of this topic. The respective options of Article 15 of the Model Grant Agreement will be applied.

**FETPROACT-EIC-05-2019**

For grants awarded under sub-topic a of this topic for Research and Innovation Actions the Commission or Agency may object to a transfer of ownership or the exclusive or non-exclusive licensing of results to a third party established in a third country not associated to Horizon 2020. The respective option of Article 30.3 of the Model Grant Agreement will be applied.

**FETPROACT-EIC-06-2019**

For grants awarded under this topic for Research and Innovation Actions the Commission or Agency may object to a transfer of ownership or the exclusive or non-exclusive licensing of results to a third party established in a third country not associated to Horizon 2020. The respective option of Article 30.3 of the Model Grant Agreement will be applied.

---

33 Any call conditions for this topic are included in this work programme section for information. Only the call conditions in the work programme section on Future and Emerging Technologies (FET) have legal value.

34 Any call conditions for this topic are included in this work programme section for information. Only the call conditions in the work programme section on Future and Emerging Technologies (FET) have legal value.

35 Any call conditions for this topic are included in this work programme section for information. Only the call conditions in the work programme section on Future and Emerging Technologies (FET) have legal value.
**FETPROACT-EIC-07-2020**

Grants awarded under each of the sub-topics shall be implemented through the use of complementary grants and the respective options of Article 2, Article 31.6 and Article 41.4 of the Model Grant Agreement will then be applied. In particular the projects are required to conclude a collaboration agreement, in principle prior to the signature of the grant agreement.

**FETPROACT-EIC-08-2020**

Grants awarded under this topic shall be implemented through the use of complementary grants and the respective options of Article 2, Article 31.6 and Article 41.4 of the Model Grant Agreement will then be applied. In particular the projects are required to conclude a collaboration agreement, in principle prior to the signature of the grant agreement.

---

**Consortium agreement**

Members of consortium are required to conclude a consortium agreement, in principle prior to the signature of the grant agreement.

EIC Accelerator pilot (SME Instrument)

H2020-EIC-SMEInst-2018-2020
EIC Accelerator pilot – SME Instrument – standard

H2020-EIC-SMEInst-2018-2020-03

Who should apply to the EIC Accelerator pilot (SME Instrument)?

Are you an innovative, high-flying small or medium-sized business with European and global ambitions?

Have you got an idea for an innovation that targets new markets and could boost the growth of your company?

Are you looking for substantial funding to support you in the last stages of development?

And could you make use of business development resources and coaching to take your company forward? Then the EIC Accelerator pilot (SME Instrument) is for you.

The EIC Accelerator pilot (SME Instrument) supports high-risk, high-potential small and medium-sized enterprises to develop and bring to market new products, services and business models that could drive economic growth.

The EIC Accelerator pilot (SME Instrument) is very selective.

Following the cut-off date of 5 June 2019, only ground-breaking concepts at the last stage before scale-up can be funded.

The highest risk, most convincing and excellent proposals can be funded after a thorough evaluation by multinational panels of technology, business and finance experts.

Selected companies receive business coaching to further develop their innovation idea, and can also receive mentoring. They are helped in networking with other EIC Accelerator pilot (SME Instrument) clients, with other companies of all sizes, and with potential co-investors and follow-up investors across Europe. As an SME Instrument client, you will gain visibility and boost your chances of success in European and international markets.

Europe needs more radical, market-creating innovations to improve productivity and international competitiveness and generate new jobs and higher standards of living.

These innovations must meet user and customer needs and tackle societal, technological and business challenges in a sustainable way.
Have you got what it takes? Then apply now!
Principles and funding of the EIC Accelerator pilot (SME Instrument)

Who can apply?

For-profit SMEs, including young companies and start-ups, from any sector. You must be established in an EU Member State or a Horizon 2020 associated country.

Following the cut-off date of 5 June 2019, only individual for-profit SMEs established in an EU Member State or a Horizon 2020 associated country.

What topics are covered?

There are no set topics. Negative impacts on climate and the environment shall be avoided.

How does it work?

The EIC Accelerator pilot (SME Instrument) provides full-cycle business innovation support. In Phase 2 support is provided in the form of grant only or, following the cut-off date of 5 June 2019, blended finance (combining grant and equity). The EIC Accelerator pilot (SME Instrument) also includes coaching and mentoring.

Feasibility study: Phase 1

Phase 1 helps you get a grip on the R&D, technical feasibility and commercial potential of a ground-breaking, innovative idea and develop it into a credible business plan.

Activities can include, for example, risk assessment, market research, user involvement, analysis of regulatory constraints or standards regimes, intellectual property management, partner search, or feasibility assessment.

Your goal in Phase 1 is to formulate a solid, high-potential innovation project with a European or global growth-oriented strategy.

Your proposal must be based on an initial business plan and outline the specifications of a more elaborate one, which will be the outcome of the project.

Phase 1 funding is a lump sum of €50 000. Projects should last around 6 months.

Please note Phase 1 will be discontinued.

The final deadline for applications will be 5 September 2019.

From concept to market: Phase 2

Phase 2 helps you develop your business concept further into a market-ready

---

38 The EIC Accelerator pilot is a mono-beneficiary scheme. This approach has been taken so to pave the way towards a fully-fledged EIC Accelerator under Horizon Europe (where it is proposed to target individual entrepreneurs).

39 Commission Decision C(2013)8198 authorising the reimbursement of cost under the form of a lump sum for SME Instrument Phase 1 actions under Framework Programme Horizon 2020 states that the total eligible cost for a Phase 1 project is €71 249. Applying the co-financing rate of 70%, the amount of the grant is established at €50 000.

40 The phase 1 of the SME Instrument was conceived to allow for funding and business support under the phase 2 and phase 3 of the SME Instrument respectively. Phase 1 projects last around six months. Phase 2 is very competitive (around 5% of success rate) and normally takes 12 to 24 months for project completion. Phase 1 proposals funded from mid-2019 on, would have limited opportunities to exploit the next phases of the SME Instrument.
product, service or process aligned with your company's growth strategy. Activities could, for example, include product/service development, trials, prototyping, validation, demonstration and testing in real-world conditions, and market replication. If the activity concerns a primarily technological innovation, a Technology Readiness Level (TRL) of 5/6 or above is required for primarily technological innovation or the equivalent for non-technological innovation. You can subcontract work essential for your innovation project.

**Phase 2 offers a grant only support to SMEs in need of one last push before the scaling-up phase; and it will offer blended finance (combining grant and equity)**\(^{41}\) to SMEs looking to further develop, grow and scale-up their idea.

Beneficiaries of the EIC Accelerator pilot (SME instrument) have access to Business Acceleration Services as described below.

You can apply to Phase 1 as a means of preparing for Phase 2, or you can apply directly to Phase 2.

Your proposal must be based on a strategic business plan that was either developed in Phase 1 or by another means. Your proposal must specify the expected outcome of the project and criteria for success, as well as the expected impacts on your company in both qualitative and quantitative terms (e.g. on turnover, employment, market size, IP management, sales, return on investment, profitability, and particularly the level of risk/ de-risking factor associated with support under the EIC Accelerator pilot).

You must pay particular attention to IP protection and ownership, and present convincing evidence or measures to ensure the possibility of commercial exploitation (often known as ‘freedom to operate’). You should also address regulatory and standardisation issues.

**Grant only** funding is provided (funding rate 70%) of between €0.5 million and €2.5 million.

Under the blended finance option, the grant component is limited to €2.5 million combined with an equity component of up to €15 million.\(^{42}\) You can request a higher or lower amount, duly justified, when applying.

Proposals with activities up to TRL 8 will be funded by grants or a blended finance option. Close to market activities (i.e. TRL 9 or above) included in a proposal, will only be financed by equity participation as long as the proposal remains non-bankable.

The grant dimension of your project should normally take 12 to 24 months to complete, but could be longer in exceptional and well-justified cases.

**Business Acceleration Services**

The Business Acceleration Services (SME Instrument Phase 3) help you take

---

\(^{41}\) Applicants may apply for the blended finance option following the cut-off date of 5 June 2019 for Phase 2.

\(^{42}\) Please note that UK-based legal entities are eligible to participate in the grant part only.
advantage of additional EU support extended via a range of business support services offered on the EIC Community Platform, open to researchers and innovators benefiting from the different EIC calls for proposals.43 This support can take the form of coaching, training, links to investors, public and private procurers of innovation, partnering and networking with other EIC beneficiaries. The Business Acceleration Services provide specific support to EIC clients that are SMEs, mainly to help them access new markets through participation to overseas trade fairs or customers and link with investors. It does not provide direct funding. In line with Commission’s communication for the ‘European Green Deal’44, the Business Acceleration Services will in particular support EIC funded SMEs in reducing their greenhouse gas emissions.

All Business Acceleration Services are accessible through a single, dedicated entry point, which serves as an information portal and networking space. [See ‘EIC Support Actions’]

Coaching

If you are benefiting from funding from the EIC Pathfinder pilot, the EIC Accelerator pilot or FTI, you will receive business coaching to help your business scale up and grow. Up to 12 coaching days are available.45

Coaching covers business development, cooperation, and financing.

Up to 3 coaching-days, per funded project, are available in Phase 1 of the EIC Accelerator pilot. Under the EIC Pathfinder pilot, the Accelerator or FTI up to 12 coaching-days, per funded project, are available.

The impact driven coaching service, supported by the European Commission, is facilitated by the Enterprise Europe Network (EEN). Coaching is delivered by one or more qualified, experienced business coaches recruited from a database managed by the European Commission. All coaches meet stringent criteria regarding business experience and coaching skills. Throughout your project, the EEN will complement the coaching support. EEN offers a service package covering an assessment of your firm's innovation management capacities and the identification of a suitable coach or consulting package to address the gaps, EEN also provides access to its innovation and internationalisation services.

Mentoring

If you are benefiting from funding from the EIC Pathfinder pilot, the EIC Accelerator pilot or FTI, we will offer mentoring to individual founders, CEOs and leaders.

43 The provision of Business Acceleration Services, under conditions to be agreed, will also be tested for (a maximum of 4) EIT Innovation Communities under the EIC Pathfinder pilot and under the Accelerator. Access to the Business Acceleration Services will also be granted to EIC COVID-19 Seals of Excellence.

45 Coaching services are only available to SMEs, including natural persons, or for the purpose of setting-up such a company.
Mentoring aims to develop leadership skills such as resilience, tenacity and strategic insight.

The mentoring scheme will involve one-to-one meetings with an experienced entrepreneur, who will share expertise and provide impartial guidance and support. Mentors will be CEOs of firms that have moved beyond the start-up stage. To begin with, mentors will be drawn from a pool of SME Instrument Phase 2 current and former clients willing to act as mentors on a pro bono basis.

Mentors and mentees will be matched up via the EIC Community Platform and during EIC Events and other suitable events.
1. Specific challenge

If your company aims to deliver a meaningful impact towards sustainable development, the Green Deal topic of the European Innovation Council (EIC) pilot Accelerator may support your endeavours.

The Green Deal proposal put forward by the European Commission set the stage for an era of increased ambition towards sustainable development. It aims to make Europe the world’s first climate-neutral continent and leader in circular economy and clean technologies. This goes hand in hand with a decisive effort to preserve and restore ecosystems and rural areas. Research and innovation will be a key supporting feature of such comprehensive strategy.

Such ambition is fully justified by the challenges lying ahead of us. For example, compared to the current situation in the EU, achieving the current 2030 climate and energy targets requires decarbonisation at a speed at least six times faster and additional annual investments of around €260 billion.

This EIC Accelerator topic contributes to implement the Green Deal goals. It aims to foster impact investing by supporting the development and market roll-out of innovations that can tilt our socio-economic systems in a more sustainable path.

2. Scope

2.1 Finance

The EIC Accelerator supports the development of business concepts into market-ready innovations (new or disruptive technologies, products, processes, services and business models) and their roll-out.

This Green Deal topic specifically concentrates on those innovations that fuel the societal transition towards sustainability while supporting EU’s competitiveness and leadership in clean technologies.

The topic targets high-risk, high-potential small- and medium-sized enterprises (including startups) - from any sector provided that they contribute to Green Deal goals (as explained in ‘expected impact’).

Projects dedicated to increase the efficiency of fossil fuels technologies or fossil fuels use are ineligible.

Support may be provided in the form of a grant or blended finance (combining grant and equity).

---

46 The Green Deal topic of the EIC Accelerator is restricted to phase 2.
- **Grant only** funding (funding rate 70%) ranges from €0.5 million up to €2.5 million.

- Under the **blended finance option**, the grant component is limited to €2.5 million combined with an equity component of up to €15 million. Duly justified higher or lower amounts can be requested too.

Proposals with activities up to Technology Readiness Level (TRL) 8 may be funded by grants or blended finance. Close to market activities (TRL 9 or above) can only be financed by equity participation (as long as the proposal remains non-bankable).

Activities could, for example, include product/service development, trials, prototyping, validation, demonstration and testing in real-world conditions, and market replication. If the activity concerns a primarily technological innovation, a TRL 5/6 or above is required for primarily technological innovation or the equivalent for non-technological innovation. Essential for the innovation project can be subcontracted.

Proposals must be based on a strategic business plan and specify the project’s success criteria and expected outcomes (as specified in ‘expected impact’).

Particular attention must be paid to IP protection and ownership, convincing evidence or measures to ensure the possibility of commercial exploitation must be presented (often known as ‘freedom to operate’). Regulatory and standardisation issues must also be addressed.

Projects should normally take 12 to 24 months to complete but could be longer in exceptional and well-justified cases.

### 2.2 Business Acceleration Services

Business Acceleration Services on the ‘Green Deal’ will be provided in line with standard EIC Accelerator pilot (SME Instrument – phase 2), as described above.

### 3. Expected impact

Projects must support the Green Deal implementation by significantly contributing (and proposals must quantitatively estimate that contribution) to at least one of the following sustainability goals:

- Increasing the EU’s climate mitigation and/or adaptation ambition;
- Supplying clean, affordable and secure energy;
- Transitioning of industry to a clean and/or circular economy (including waste prevention and/or recycling);
- Building and renovating in an energy and resource efficient way;
- Accelerating the shift to sustainable and smart mobility;
- Transition to a fair, healthy and environmentally-friendly food system;
- Preserving and restoring ecosystems and biodiversity;
- Realising a zero pollution ambition and a toxic-free environment.

---

47 Please note that UK-based legal entities are eligible to participate in the grant part only.
Simultaneously, projects shall do no significant harm to any of these objectives and should enhance European Union’s competitiveness and leadership in clean technologies.
## Conditions for the call EIC Accelerator pilot

### (SME Instrument)

Type of funding: SME instrument Phase 1/ Phase 2

### Opening dates, deadlines, indicative budgets

** of which at least an aggregated EUR 100 million for equity support under the Accelerator in 2019 and 2020.

*** will be provided under EIC Pathfinder pilot, EIC Accelerator pilot and FTI.

**** The Commission will aim at having in the pool of the best applications invited to face-to-face interviews in the EIC Accelerator cut-off deadline of 7 October 2020 and in the EIC Accelerator “Green Deal” cut-off deadline of 19 May 2020 at least 25% of applications submitted by SMEs (including start-ups) led by women CEOs (or equivalent position).

***** 32% for cut-off deadline of March 2020, including exceptional budget of EUR 150 million for proposals on Coronavirus.

49 “Green Deal” eligibility.

50 The budget amounts for the 2020 budget are subject to the availability of the appropriations provided for in the draft budget for 2020 after the adoption of the budget 2020 by the budgetary authority or, if the budget is not adopted, as provided for in the system of provisional twelfths.

51 Including access to Business Acceleration Services for EIC COVID-19 Seals of Excellence, as well as support to the most promising ideas identified during the PanEU Hackaton (24-26-04-2020) via the EIC Community Platform.

52 In order to ensure equal opportunities to all applicants to present their proposal during step 2 of the evaluation of the SME instrument phase 2, the applicants invited to interview will receive a contribution to travel, accommodation and subsistence expenses. An amount of € 2 million financed out of this budget will be used for this purpose.
Who can benefit from EIC Accelerator pilot (SME Instrument) funding?

A proposal will be considered **eligible** if:

- Its content corresponds, wholly or in part, to the description of the EIC Accelerator pilot (SME Instrument) call53.

- The single beneficiary, or every beneficiary of a consortium54, is a for-profit SME (including start-up) located in an EU Member State or a Horizon 2020 associated country.

- There is no concurrent submission or implementation55 with another EIC Accelerator pilot (SME Instrument) Phase 1 or Phase 2 project (before and after the introduction of the EIC Accelerator pilot).

- If an applicant is involved in two proposals that were formally submitted but not yet reviewed under phase 1 and/or 2, only the proposal that was submitted first will be considered eligible.

- Only applicable to the EIC Accelerator "Green Deal": Projects must significantly contribute to at least one of the sustainability objectives mentioned under ‘expected impact’ of the topic description. Simultaneously, projects shall do no significant harm to any of those objectives. Projects dedicated to increase the efficiency of fossil fuels technologies or fossil fuels use are ineligible.

What are the requirements for an EIC Accelerator pilot (SME Instrument) proposal to be admissible?

A proposal will be considered **admissible** if the following conditions are met:

- it was submitted in the electronic submission system before the final cut-off deadline;

- it is readable, accessible and printable;

- it is complete and includes the requested administrative data, the proposal description (including detailed information about the TRL level (or equivalent for non-technological innovation) for Phase 2), and the obligatory supporting documents specified below;

- for a Phase 2 proposal, it includes a mandatory first commercialisation plan.

How long can my EIC Accelerator pilot (SME Instrument) proposal be?

In Phase 1, the maximum length of a proposal (proposal description, sections 1 to 3) is **10 pages**.

---

53 As from the cut-off date of 5 June 2019, activities of a TRL (or its equivalent for non-technological innovation) above 8 can only be financed by blended finance option. Grant component will only apply to the activities with a TRL (or its equivalent for non-technological innovation) of 5/6 to 8.

54 Not applicable after the 5 June 2019 cut-off for Phase 2.

55 Complementary proposals building on ongoing SME Instrument Phase 2 projects requesting blended finance are not considered concurrent implementation. These complementary proposals must build on the initial running project and will request equity and additional grant where justified by new TRL5/6 to 8 and/or TRL9 activities. The initial running project must have started at least 6 months prior to the date of submission of the complementary proposal.
In Phase 2, the maximum length of a proposal (proposal description, sections 1 to 3) is 30 pages.

The page limits, the sections subject to the limits and the formatting applicable are shown in the ‘proposal templates’ in the Funding & Tender Portal electronic submission system.

If your proposal exceeds the page limits, you will receive an automatic warning and be advised to resubmit a version that conforms to the limits.

After the cut-off deadline, excess pages will automatically be made invisible, and will not be taken into consideration by the experts evaluating your proposal.

**Evaluation rules for the EIC Accelerator pilot (SME Instrument)**

**Selection criteria**

- **Financial capacity:** Applicants for mono-beneficiary grants (single SME applicants) are not subject to an automatic financial viability check.

  Coordinators of consortia\(^{56}\) of several SMEs will be invited, at proposal stage, to complete a self-assessment using an online tool.

- **Operational capacity:** During the evaluation of the award criterion ‘Quality and efficiency of implementation’, experts will judge whether each individual participant has, or will have in due time, sufficient operational capacity to successfully carry out their tasks in the proposed work-plan. This assessment will be based on the competence and experience of the applicant, including their operational resources (human, technical, other) and, if applicable and on an exceptional basis, the measures proposed to secure these resources by the time of the implementation of the tasks.

The operational capacity of each applicant is determined on the basis of the following supporting documents, which are required when submitting a proposal:

- A CV or description of the profile of the persons who will be primarily responsible for carrying out the proposed activities.

- A brief description of relevant products, services (including widely used datasets or software) or other achievements (which may also include previous projects or activities connected to the subject of the proposal).

- A description of any significant infrastructure and/or any major items of technical equipment relevant to the proposed work.

- A description of any third parties that are not represented as project partners but who will nonetheless be contributing towards the work, for example by providing facilities or computing resources.

- **Minimum sustainability and expected impact requirements:**

  - Projects must neither hinder the achievement of EU climate objectives nor have other significant negative environmental impacts.

\(^{56}\) Not applicable after 5 June 2019 for Phase 2.
Award criteria

Phase 1 and Phase 2 – grant only and blended finance proposals are evaluated by experts on the basis of three award criteria: ‘impact’, ‘excellence’, and ‘quality and efficiency of implementation’. The aspects examined under each criterion are described in the table below.

<table>
<thead>
<tr>
<th>Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>50% WEIGHTING – following the cut-off date of 5 June 2019</strong></td>

<tr>
<td><strong>Phase 1 (only):</strong> Good understanding of need for a realistic and relevant analysis of <strong>market conditions</strong>, total potential market size and growth-rate, competitors and competitive offerings, key stakeholders, clear identification of opportunities for market introduction: potential for market creation is particularly sought after.</td>
</tr>
<tr>
<td><strong>Phase 2 (only):</strong> Realistic and relevant analysis of <strong>market conditions and growth-rate</strong>, competitors and competitive offerings, key stakeholders, clear identification of opportunities for market introduction, market creation or disruption (e.g. via new value-chains).</td>
</tr>
<tr>
<td>Realistic and relevant description of how the innovation has the <strong>potential to scale-up the applicant company (or companies).</strong> This should be underpinned by a convincing business plan with a clear timeline, and complemented, where possible, by a track-record that includes financial data <strong>(following the cut-off date of 5 June 2019: including financial needs to ensure the company’s success).</strong></td>
</tr>
<tr>
<td><strong>The ‘potential to scale-up’ aspect and associated financial needs are particularly examined in Step 2.</strong></td>
</tr>
<tr>
<td><strong>Alignment of proposal with overall strategy of applicant SME (or SMEs) and commitment of the team behind them.</strong> Demonstration of need for commercial and management experience, including understanding of the financial and organisational requirements for <strong>commercial exploitation (Phase 2 only)</strong> as well as key third parties needed.</td>
</tr>
</tbody>
</table>

---

57 Applicants may apply for the blended finance option following the cut-off date of 5 June 2019 for Phase 2.
58 Following the cut-off date of 5 June 2019 for Phase 2, during the electronic proposal submission process, activities of a TRL (or its equivalent for non-technical innovation) above 8 can only be funded by blended finance option.
Phase 1 (only): Outline of initial commercialisation plan and how this will be developed further (in-house development, licensing strategy, etc.).

Phase 2 (only): Realistic and relevant strategic plan for commercialisation, including approximate time-to-market or deployment. Activities to be undertaken after the project.

The 'commercial strategy' aspect is particularly examined in Step 2 of the evaluation of Phase 2 proposals.

European/global dimension of innovation with respect to both commercialisation and assessment of competitors and competitive offerings.

Phase 1 (only): Realistic and relevant description of knowledge protection status and strategy, need for 'freedom to operate' (i.e., possibility of commercial exploitation), and current IPR situation or a plan for obtaining this information. Where relevant, description of potential regulatory requirements.

Phase 2 (only): Evidence of or realistic measures to ensure 'freedom to operate' (i.e., possibility of commercial exploitation), convincing knowledge-protection strategy, including current IPR filing status, IPR ownership and licensing issues. Regulatory and/or standards requirements addressed.

Taken as whole, to what extent the above elements are coherent and plausible.

Excellence

25% WEIGHTING – following the cut-off date of 5 June 2019 1/3 WEIGHTING for Phase 2

High-risk/high-potential innovation idea that has something that nobody else has. It should be better and/or significantly different to any alternative. Game-changing ideas or breakthrough innovations are particularly sought after.

Its high degree of novelty comes with a high chance of either success or failure.

Realistic description of current stage of development (Phase 2 only: at least TRL 5/6, or something analogous for non-technological innovations59), and clear outline of steps planned to take this innovation to market.

Highly innovative solution that goes beyond the state of the art in comparison with existing or competing solutions, including on the basis of costs, ease of use and other relevant features as well as issues related to climate change or the environment, the gender dimension, any other benefits for society, or (Phase 1 only) includes plans for obtaining this information.

Very good understanding of both risks and opportunities related to successful market introduction of the innovation from both technical and commercial points of view or (Phase 1 only) includes convincing plans for obtaining this information.

Phase 2 only: Documentation on the technological, practical and economic feasibility of the innovation.

The 'feasibility' aspect is particularly examined in Step 2 of the evaluation of Phase 2 proposals.

---

59 Following the cut-off date of 5 June 2019 for Phase 2, proposals with a TRL (or its equivalent for non-technological innovation) above 8 will only be funded by blended finance option. Grant component will only apply to the activities with a TRL (or its equivalent for non-technological innovation) of 5/6 to 8.
Phase 1 (only): **Objectives for the feasibility study** and the **approach and activities** to be developed are consistent with the expected impact of the project.

Phase 2 (only): **Objectives for the innovation proposal** as well as the **approach and activities** to be developed are **consistent with the expected impact** (i.e. commercialisation or deployment resulting in company growth). Appropriate definition provided of specifications for outcome of project and criteria for success.

Taken as whole, to what extent the above elements are **coherent and plausible**.

**Quality and efficiency of implementation**

25% WEIGHTING - following the cut-off date of 5 June 2019 1/3 WEIGHTING for Phase 2

Following the cut-off date of 5 June 2019 and for Phase 2 only: Evidence that the applicant company **cannot leverage sufficient investments** from the market and/ or, particularly for applicant companies requesting blended finance support, evidence that the applicant company is **deemed 'non-bankable'** by the market, in view of the activities to be developed. The 'leveraging of investments' and 'bankability' aspects are particularly examined in Step 2 of the evaluation of Phase 2 proposals.

**Technical/business experience of the team**, including management capacity to lead a growing team

*Only Phase 1:* If relevant, the proposal includes a plan to acquire missing competences.

*Only Phase 2:* If relevant, the proposal includes a plan to acquire missing competences, namely through partnerships and/or subcontracting*, and explains why and how they are selected (*subcontractors must be selected using 'best value-for-money' principles*).

The 'team' aspect is particularly examined in Step 2 of the evaluation of Phase 2 proposals.

**Availability of resources required** (personnel, facilities, networks, etc.) to develop project activities in the most suitable conditions.

Where relevant, complementarity of partners in a consortium60.

*Only Phase 2:*

Where relevant, realistic description of how key stakeholders / partners / subcontractors could be involved* (*subcontractors must be selected using 'best value-for-money' principles*). Current financial support by accelerator services and/or business angels will be taken into account. Evidence must be provided as regards the length and type of support received.

Where relevant, the estimated budget and the procedure planned for selecting the subcontractors are appropriate*.

**Realistic timeframe and comprehensive description of implementation** (work-packages, major deliverables and milestones, risk management) taking the company's or applicant's innovation ambitions and objectives into account.

*Subcontracting is acceptable to the extent required for the implementation of the proposed activities. Subcontracting may be an essential part of the implementation of the project, but should not be a disproportionate part of the total estimated eligible costs. Subcontractors must be selected using 'best value-for-money' principles.*

---

60 Not applicable after the 5 June 2019 cut-off for Phase 2.
Taken as whole, to what extent the above elements are coherent and plausible.

**Evaluation procedure**

**After each Phase 1 cut-off**

- Proposals are evaluated in one step.
- A proposal is evaluated remotely by a number of evaluators with a mixture of technology, industry sector, business and finance expertise.
- Each evaluator scores each of the three award criteria from 0 to 5. Scores with a resolution of one decimal place may be given.
- The quality threshold of each criterion is 4 out of 5. The overall quality threshold, applying to the weighted sum of the three individual scores, is 13 out of 15.
- The consensus score at the level of the three evaluation criteria is the median of the scores given by each evaluator. The overall consensus score is the weighted sum of these separate scores. Proposals that have passed all thresholds are ranked in the order of their final score.
- If necessary, a panel review is organised remotely.

**After each Phase 2 cut-off for both, grant only or blended finance applications**

- Applicants are required to provide detailed information about the TRL level (or its equivalent for non-technological innovations). In that context, applicants should be aware that activities above TRL 8 can only be funded as equity through blended finance option.
- The process of evaluation can recommend three outcomes: 'Go' decision, 'No Go' decision or 'change into blended finance' decision. Applicants that apply for grant only option will have the opportunity at the time of submission to give the European Commission consent to provide the requested amount of funding in the form of blended finance, should the evaluation conclude there are activities above TRL 8.
- Only the proposals with activities above TRL 8 will be subject to such possibility. The blended finance could replace the initial grant requested at the time of submission. Applicants that do not express such consent will not be considered for a blended finance and will be rejected.
- For blended finance proposals, the evaluation for the grant component will follow the same steps described below as evaluation of proposals for grant only.
- In the case of proposals with ‘Go’ decision for grant only, Commission will initiate the grant agreement preparation process with SMEs.

---

61 Following the cut-off date of 5 June 2019 for Phase 2, during the electronic proposal submission process, applicants will choose to apply for grant only or for blended finance (combined grant and equity).

62 As from 5 June 2019 (for Phase 2) the grant component will only apply to the activities with a TRL (or its equivalent for non-technological innovation) of 5/6 to 8.

63 The criteria for providing funding as blended finance for activities above TRL 8 will be specified in the guide for applicants.
In the case of proposals for blended finance (with ‘Go’ decision or ‘change into blended finance’ decision) Commission will initiate the grant agreement preparation process with SMEs for the grant component. The grant agreement will be then signed between the Commission and the company. These companies will be referred to the EIC Fund team for a due diligence process for the equity component. The EIC Fund will check whether the company is fit for receiving this equity component.

If the result of the due diligence is negative, equity component will not be funded and the grant agreement may be terminated. If the due diligence is positive, the equity contract will be signed between the EIC Fund and the company.

In the case of applicants to whom the Commission proposed funding as blended finance, the grant amount initially requested for the activities of TRL 9 or above will be directly transferred to equity amount. In the case of negative outcome of the due diligence, it will not be funded (neither as grant nor as equity).

Proposals with ‘No Go’ decision will be rejected. However proposal rejected on the basis of the bankability assessment but assessed as viable for other types of EU financing will be invited to consider other European Union financial instruments.

Applications are evaluated in two steps.

**Step 1: remote evaluation**

- A proposal is evaluated remotely by a number of evaluators with a mixture of technology, industry sector, business and finance expertise.
- Each evaluator scores each of the three award criteria from 0 to 5. Scores with a resolution of one decimal place may be given.
- The quality threshold of each criterion is 4 out of 5. The overall quality threshold, applying to the weighted sum of the three individual scores, is 13 out of 15.
- The consensus score of a proposal at the level of the three evaluation criteria is the median of the scores given by each evaluator. The overall consensus score is the weighted sum of these scores.
- Proposals that pass all quality thresholds will be considered for step 2.
- For proposals submitted to the March 2020 cut-off, the evaluators, based on the priorities defined in collaboration with Health Security Committee, will also assess whether they are directly relevant to the Coronavirus crises. Coronavirus relevance includes innovations addressing: diagnostics and treatments for Coronavirus; protection and solutions for healthcare systems; monitoring and information systems for infectious diseases; prevention and preparedness for Coronavirus and/or pathogens with the potential for Public Health Emergency of International Concern (PHEIC) epidemics; and wider socio-economic impacts caused by Coronavirus including business continuity and social wellbeing.

---

64 After the diligence process European investors will be approached for their possible interest to invest into the company. If an investor is to be found on the market, the equity component of the blended finance will not be implemented as foreseen.
**Step 2: face-to-face interview**

- Starting with the highest-scoring proposal and in descending, sequential order, proposals are passed to Step 2 until, as a batch, either the total amount of EU funding requested is as close as possible to at least twice the budget available, or all proposals eligible for funding have been accounted for. The actual threshold to pass to Step 2 will therefore be dynamic and depend on the volume of proposals received that pass all quality thresholds.

- As an exceptional measure, for proposals submitted to the March 2020 cut-off the above procedure will be applied separately depending on whether proposals are assessed as directly relevant to the Coronavirus crises. For those proposals assessed as not directly relevant to the Coronavirus crises, the above procedure will be applied for an indicative budget amount of €164 million. For proposals assessed as directly relevant to the Coronavirus crises, the above procedure will be applied for an additional indicative budget amount of €150 million.

If as a result of the face-to-face interviews step:

- the entire indicative budget initially dedicated to funding the best Coronavirus related proposals is not allocated, the remaining balance will supplement the budget to be allocated to funding the best non-Coronavirus related proposals;
- the entire indicative budget initially dedicated to funding the best non-Coronavirus related proposals is not allocated the remaining balance will supplement the budget to be allocated to funding the best Coronavirus related proposals;
- both the entire indicative budgets initially dedicated to funding the best Coronavirus and non-Coronavirus related proposals are not allocated, the remaining balance will be allocated to indicative budgets of subsequent cut-off dates.

- To contribute towards a more gender balanced European innovation ecosystem, for the cut-off deadlines of 7 October 2020 and for the EIC accelerator Green Deal of 19 May 2020, when inviting the best applicants who passed all the quality thresholds to face-to-face interviews, the Commission will aim at having in the pool of the best applicants invited to interviews at least 25% of applications submitted by SMEs (including start-ups) led by women CEO (or equivalent position). To this end, the pool of the best applicants invited to face-to-face interviews will be constituted as follows:

  ✓ Like for the first and second cut-off dates, a pool of the best ranked applications after step 1 (highest scoring) requesting an aggregated financial support equal to at least the double of the budget available will be constituted.

  ✓ If in that pool:

    - at least 25% of the applications are submitted by SMEs (including start-ups) led by women CEOs (or equivalent position), only the applications of that pool will be invited to face-to-face interviews.
    - less than 25% of the applications are submitted by SMEs (including start-ups) led by women CEOs (or equivalent position), the pool will be expanded to subsequent best ranked applications (starting with the highest scoring in descending, sequential order) submitted by SMEs (including start-ups) led by women CEOs (or equivalent position) until reaching, if possible, a composition of the pool of at least 25% of applications submitted by SMEs (including start-ups).
led by women CEOs (or equivalent position). All such applicants invited to interview must have passed the quality thresholds from Step 1.

- SMEs (including start-ups) led by women CEO means that the Chief Executive Officer (CEO) of the company, or the equivalent position, is held by a woman at the time of application, interview and award of the EU Financial support. This will be subject to verification by the Commission.

- Each applicant whose proposal has passed to Step 2 is invited to a face-to-face interview in Brussels. In exceptional cases, interviews may be organised via video-conference.

- Only staff of applicants can represent them. Representation by third parties is forbidden.

- The interview is conducted by evaluators with a mixture of technology, industry sector, business and finance expertise.

- During the interview, the applicant will be asked questions designed to clarify aspects of the proposal evaluated in Step 1, in particular those indicated above under 'award criteria'.

- In Step 2, proposals will receive, in addition to the score in Step 1, an 'A' mark or a 'B' mark from the final panel review.

- Only proposals that have passed all quality thresholds and receive an 'A' mark are proposed for funding, including blended finance when applicable, in order to ensure that only the best proposals will be retained for funding.

**For both Phase 1 and Phase 2**

- During the electronic proposal submission process, you can provide up to three names of persons that should not act as an evaluator of your proposal, for commercial or other reasons. The persons identified may be excluded from the evaluation of the proposal, as long as it remains possible to have the proposal evaluated.

- To set a priority order for proposals given the same consensus score in Phase 1, the following method is used:
  - Proposals are first prioritised according to scores given for the award criterion 'impact'.
  - Where those scores are equal, priority is then determined using scores for the award criterion 'excellence'.
  - If necessary, a further prioritisation is based on the degree of gender balance among the personnel named in the proposal as primarily responsible for carrying out the project.

**Communication to applicants after evaluation procedure**

**Phase 1**

For each proposal, applicants receive an evaluation summary report with the scores obtained and a qualitative assessment with respect to each of the aspects considered under each of the three award criteria.
Phase 2

Each applicant invited to an interview in Step 2 receives an invitation at the end of Step 1. For each proposal, applicants receive an evaluation summary report with the scores obtained and a qualitative assessment with respect to each of the aspects considered under each of the three award criteria (Step 1 of the evaluation). For proposals that have passed to Step 2, the report will contain an A or B mark and an additional qualitative assessment including a possible recommendation on resubmission. Successful applicants will be informed.

Phase 1 and Phase 2 applicants meeting all quality thresholds but not receiving funding will receive a Seal of Excellence.

Consortium agreement

Members of consortium are required to conclude a consortium agreement, in principle prior to the signature of the grant agreement.65

Indicative timetable for evaluation and grant agreement signature66

- Information about the outcome of the evaluation: Maximum 2 months after the corresponding cut-off date set out above for phase 1 and maximum 4 months after the corresponding cut-off date set out above for phase 2.

- Indicative date for the signing of grant agreements: Maximum 3 months from the final date for submission in phase 1 and maximum 6 months from the final date for submission in phase 2.

---

65 Not applicable after the 5 June 2019 cut-off for Phase 2.
66 Due to the launch of the new enhanced EIC pilot the first applications under the EIC Accelerator pilot may experience processing delays. For these cases, Horizon 2020 TTI and TTG timeframes shall be observed.
OTHER CALLS

Fast Track to Innovation (FTI)

H2020-EIC-FTI-2018-2020
Who should apply to FTI, the Fast Track to Innovation?

Are you looking for partners that can help you with a fast go-to-market of an industry-driven, innovative concept that has strong potential to make your company grow and scale-up?

Do you see co-creation or open innovation as ways to advance your innovation cycle and enter the market within three years?

Are you looking for substantial funding to test, demonstrate and validate your innovation with users before full commercial roll-out, potentially via a spin-off company or a joint venture?

Then FTI is the scheme for you.

Innovation is fostered when new ideas can emerge and easily translate into socio-economic value, shaping new markets and laying the foundations of a stronger, high-tech industrial base for Europe.

Working together, partners with complementary backgrounds, knowledge and skills, in both new and established value-chains, can turn ideas into world-beating products, processes and services that tackle societal challenges.

**FTI accelerates the market uptake of ground-breaking innovations by providing funding in an open, accessible scheme that nurtures ideas from consortia of innovators of all types and sizes from across Europe.**

Participation by industry — defined as private-for-profit organisations — is mandatory; industry is best-placed to ensure the due commercial exploitation of the innovation developed; in addition, company growth and development in order to strengthen Europe’s industrial leadership are explicitly pursued with FTI support.
Principles and funding of FTI

FTI supports actions undertaking innovation from the demonstration stage through to market uptake, including activities such as piloting, test-beds, systems validation in real-world working conditions, validation of business models, pre-normative research, and standard-setting.

The maximum EU contribution per action is €3 million (funding rate: 70% for for-profit entities; 100% for not-for-profit entities).

**FTI targets relatively mature, ground-breaking new technologies, concepts, processes and business models that need final development to be able to shape a new market and achieve wider deployment.**

If your proposal involves technological innovation, your consortium should declare that the technology or the technologies concerned are at least at Technology Readiness Level (TRL) 6. The intention will be to bring the TRL up to 8 for technological innovations and to an analogous level of maturity for non-technological innovations during the lifetime of the FTI action. TRLs are described in General Annex G of the work programme.

FTI actions are encouraged to be interdisciplinary, cutting across different sectors and technologies. Actions supporting innovative concepts that have the potential to disrupt or to create new markets are particularly welcome.

In your proposal, you should:

- Specify the intended outcome and describe key performance indicators and success criteria.
- Make reference to and incorporate a business plan clearly describing the market potential, business opportunities for participants, measures to enhance the probability of eventual commercial take-up, and a credible commercialisation strategy that identifies next steps and specifies other actors to be involved.
- Pay particular attention to IP protection and ownership and to the possibility of commercial exploitation (often known as 'freedom to operate').
- Specify the expected impact in terms of competitiveness and growth of the business partners in the consortium, measured in terms of turnover and job creation.
- Clearly describe the expected impact in both qualitative and quantitative terms, with factors such as time sensitivity and international competitiveness considered in the light of the technology field, innovation area and industry sectors concerned.

*The time to initial market take-up should be no more than 3 years from the start of your FTI action.*
In very well-justified cases linked to the specific characteristics of a particular innovation field or industry sector, the time to initial market take-up could be longer.

Possible impacts on sustainability or climate change, in particular, or on other cross-cutting objectives of Horizon 2020, must be highlighted.

Participation from industry in your consortium is mandatory. Universities and research and technology organisations can also participate. Actors with an important role in commercialisation are encouraged to take part, such as cluster organisations, end-users, industry associations, incubators, investors, and the public sector. Including start-ups with ground-breaking ideas that could create new markets is encouraged.

### Conditions for the Call FTI

*divided equally between cut-off dates in each year*

**Who can benefit from FTI funding?**

The eligibility conditions described in [General Annex C of the work programme](#) apply, with the following exceptions:

- Participation of three to no more than five different legal entities, independent of each other, in a consortium.

- Allocation of at least 60% of the overall budget to consortium partner(s) from industry; or a minimum of 2 industry partners out of a consortium of 3 or 4; or a minimum of 3 industry partners out of a consortium of 5.

- Requested EU contribution not more than €3 million.

- All consortium members established in EU Member States or in countries associated to Horizon 2020.

**What are the requirements for an FTI proposal to be admissible?**

The admissibility conditions described in [General Annex B of the work programme](#) apply.

**How long should an FTI proposal be?**

The maximum length of a proposal is 30 pages (proposal description, sections 1 to 3).

**Evaluation rules for the FTI**

**Award criteria, scoring and threshold**

The criteria, scoring and threshold described in [General Annex H of the work programme](#) apply, with the following exceptions:

- Evaluation scores are awarded for each criterion. Each criterion is scored from 0 to 5. Scores with a resolution of one decimal place may be awarded.

---

67 The budget amounts for the 2020 budget are subject to the availability of the appropriations provided for in the draft budget for 2020 after the adoption of the budget 2020 by the budgetary authority or, if the budget is not adopted, as provided for in the system of provisional twelfths.
The threshold for the criteria 'Impact' and 'Excellence' is 4. The threshold for the criterion 'Quality and efficiency of the implementation' is 3. The overall threshold, meaning the sum of the three individual scores, is 13.

The consensus score of a proposal at the level of the three evaluation criteria is the mean (average) of the separate scores given by each evaluator. The overall consensus score is the weighted sum of these separate scores.

The consensus report comprises the individual reports or key extracts from them, and will provide a summary of the main weaknesses of your proposal.

- The aspects to be considered for each evaluation criterion are set out below.

<table>
<thead>
<tr>
<th>Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>50% WEIGHTING</td>
</tr>
<tr>
<td>The objectives of the proposed action are in line with the expected impacts of the FTI, notably fast development, commercial take-up and/or wide deployment of innovative solutions, time to initial market take-up, leveraging of private investment in research and/or innovation. In addition, in line with the objectives of the European Innovation Council Pilot, proposals that can create a new market are particularly sought after.</td>
</tr>
<tr>
<td>The proposed innovation will lead to enhanced innovation capacity of the consortium partners, and in particular of the industry partners.</td>
</tr>
<tr>
<td>The proposed innovation/solution has a clear European or global dimension, in the sense that it is set to create substantial demand from European and global markets and/or can create a new market or disrupt an existing one at European or global level, which is well documented and supported with evidence on customer/user/market needs that can be translated into sales. The proposal provides a realistic and convincing analysis of the targeted market(s) and client/user base and how the innovation will meet their needs.</td>
</tr>
<tr>
<td>The way the project will strengthen the growth/ scale-up and competitiveness of the industry partners involved is well documented.</td>
</tr>
<tr>
<td>Framework conditions such as regulation and standards, market size, prospects for growth, competitive edge and intended positioning of the solution towards possible others (competitor analysis) are documented, and the outlook can be described as positive for market launch within 3 years' of time.</td>
</tr>
<tr>
<td>The commercialisation plan is realistic and convincing – containing a clear description of the new business opportunity and the way to capitalise on it. The plan includes effective measures to exploit and disseminate the action's results (including with respect to IPR management and standards). There is a broader strategy for knowledge management and protection with regards to the proposed innovation/solution, ensuring &quot;freedom to operate&quot;. Key stakeholders that can help with market introduction are identified, and a convincing strategy to get them on board exists. Communication, marketing and sales efforts are planned in a coordinated way, on the basis of a realistic timetable, and fit into a solid commercial strategy.</td>
</tr>
<tr>
<td>Based on the provided market analysis and the projected commercialisation strategy, the likely return on investment of the proposed innovation (for instance in the form of projected...</td>
</tr>
</tbody>
</table>
rapid scale-up leading to job creation and/or company growth) is sufficiently attractive to justify EU funding under FTI.

The proposed innovation is expected to generate a positive impact at the European level other than economic (societal, environmental, scientific, etc.). Wherever appropriate, the minimisation of impacts on climate and the environment is pursued.

The proposed financing plan for further roll-out of the innovation is realistic and convincing and offers a sufficient guarantee and coverage to allow for further scale-up of the action and companies involved.

**Excellence**

25% WEIGHTING

The objectives of the proposal are defined in a clear and pertinent way, support Horizon 2020 objectives, and are directed towards fast, wide market uptake.

The proposed activities to be executed will contribute to a credible, realistic and optimal development of the innovation to the level of market uptake.

The underlying, jointly developed business innovation concept of the proposed innovation is sound, and has already been tested in an operational/production environment. It has a potential to bring important progress to or revolutionise an existing industrial sector, business practice and/or societal challenge.

The proposed innovation is ambitious and is set to add substantial value to Europe (e.g. considerably contribute to Europe's industrial leadership or the solution of Horizon 2020 societal challenges), and this is well identified and elaborated in the proposal. Game-changing ideas or breakthrough innovations are particularly sought after.

A high degree of novelty comes with a high chance of either success or failure.

The proposed innovation has successfully been tested in an operational or production environment (stage of development at TRL 6 or similar for non-technological innovations) and can move to market take-up (B2B or B2C) within maximum 36 months.

The proposal demonstrates that the intrinsic quality of the innovation will be significantly higher than current state-of-the-art solutions, in terms of value for money, problems solved, new applications, sustainability, etc.

**Quality and efficiency of implementation**

25% WEIGHTING

The work plan is coherent and effective. It takes into account the project’s ambition and objectives, includes a realistic and relevant time-frame, and refers to a sound and comprehensive implementation plan, in particular in relation to major deliverables. Tasks and resources are allocated in an appropriate and cost-effective way.

The proposal demonstrates that the partners of the consortium are complementary, and together have what it takes (personnel, facilities, skills, networks, access to markets...) to deliver on ground-breaking innovation and fast, wide market uptake. Implementation risks and threats are well identified; the proposal contains a risk mitigation plan, with detailed actions.
Both the organisational framework/governance structure underpinning the action and the decision-making processes are established in a clear and efficient way.

**Evaluation procedure**

The procedure for setting a priority order for proposals with the same score is given in General Annex H of the work programme. The full evaluation procedure is described in the relevant guide published on the Funding & Tender Portal.

**Consortium agreement**

Members of consortium are required to conclude a consortium agreement, in principle prior to the signature of the grant agreement.

**Indicative timetable for evaluation and grant agreement signature**

- Information about the outcome of the evaluation: maximum 3 months after the corresponding cut-off date set out above.
- Indicative date for the signing of grant agreements: maximum 6 months from the final date for submission.
EIC Horizon Prizes
EIC Horizon Prizes

Who should apply

EIC Horizon Prizes aim to boost breakthrough innovation across sectors by fostering cutting-edge solutions which bring major benefits to citizens and society.

Are you an innovator, an academic, a start-up, an entrepreneur or a business willing to think out of the box, across sectors and disciplines?

Do you want to use your creativity and expertise to bring breakthrough solutions to the market faster or to develop cutting-edge solutions to address the problem?

Are you ready to engage with other innovators to develop close-to-market solutions which will answer major societal problems?

Have a go!

Principles of EIC Horizon Prizes

EIC Horizon Prizes set an ambitious goal, without saying how that goal should be achieved or who should achieve it. The prize is awarded to whoever can most effectively meet a defined challenge.

EIC Horizon Prizes are particularly ambitious with regards to the societal problems to be addressed.

EIC Horizon Prizes call for breakthrough solutions from innovators, aiming to demonstrate the feasibility or potential of particular technologies and promote uptake.

The objectives of the prize contests are to solve a problem, without prescribing a specific solution to be implemented. The contests are built on simple, clear, comprehensive and objective targets that must be reached to win the contest. They address challenges to be solved by 2021 at the latest (see specific conditions for each contest).

Specific characteristics for each Prize are defined in the individual rules of contest, which lay down conditions for submission and participation, detailed award criteria (scoring and the weighting methodology), and the evaluation process.

Prizes are awarded to whoever can most effectively meet the defined challenge as set out in the rules of contest. The amount of the prize is not linked to the costs of the activities incurred by the winner; the principles of eligible costs, co-financing, non-retroactive award and no-profit do not apply.
For more information, please see the Horizon 2020 Model Rules of Contest for Prizes.
1. EIC Horizon Prize for 'Innovative Batteries for eVehicles'

**Challenge**

The challenge is to develop a safe and sustainable battery for electric-vehicles through the development of new materials and chemistries making use of abundant, sustainable low cost materials, which are easily available in Europe. Solutions are required to provide the same or better performance than vehicles with internal combustion engines and to be capable of recharging the electric vehicle within a time equivalent to fill a conventional gasoline/diesel fuel tank.

This prize will contribute significantly to the decarbonisation of Europe for the benefit of the EU’s economy and its citizens.

This prize will:

- Foster knowledge, innovation and competitiveness in e-vehicle battery/energy storage technologies.
- Enhance the European manufacturing base for e-vehicle batteries.
- Strengthen the European Industrial value chain (e.g. through exploitation or synergies with existing European industrial infrastructures).
- Strengthen European value added in the supply and knowledge of advanced materials and chemistries for batteries.
- Encourage electro-mobility, opening up new markets and incentivising technological innovations.
- Enhance employment prospects along the entire electro-mobility value chain.
- Contribute to a significant drop in CO2 and NOx emissions in line with global environmental policies.

The specific rules of the contest will be published in the fourth quarter of 2017 by the European Commission, which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

**Expected results**

A prototype battery with fast repowering and long-distance range, high recyclability, and long life cycle.

**Eligibility criteria**

The contest is open to any legal entity (including natural persons) or group of legal entities established in an EU Member State or in a country associated to Horizon 2020.

**Essential award criteria**

---

68 A pre-selection phase may be done by Commission services in case of numerous applications received.

69 For reasons of fostering Europe's competitiveness in the innovative battery sector, participation to this prize contest will be limited to EU Member States and Countries Associated to Horizon 2020.
The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury demonstrates a solution that best meets the following cumulative criteria for a prototype battery (demonstrated and tested in adequate environment):

- Provides high standards for safety, sustainability and recyclability;
- Provides the same experience and user convenience, in terms of range and time required to recharge, as a conventional gasoline/diesel car;
- Has whole-life costs (in terms of battery materials and its functionality) equivalent or better than gasoline/diesel car;
- Demonstrates reliable power delivery without significant loss of performance for an economically acceptable life time (power delivery to be demonstrated for a life time higher than batteries currently available);
- Ensures that other performance criteria (car acceleration, safety, etc.) are maintained in comparison to a combustion engine powered vehicle;
- Demonstrates a significant advance in new material technologies while avoiding dependence on import materials (e.g. expensive, rare, and unsustainable materials);

\(^{70}\) of which EUR 5.00 million from the ‘Access to Risk Finance’ WP part, EUR 5.00 million from the ‘Nanotechnologies, Advanced Materials, Biotechnology and Advanced Manufacturing and Processing’ WP part.
2. EIC Horizon Prize for 'Fuel from the Sun: Artificial Photosynthesis'

Challenge

The challenge is to build a fully functional, bench-scale prototype of an artificial photosynthesis based system which is able to produce a useable synthetic fuel.

Artificial photosynthesis is widely considered to be among the most promising new technologies to deliver sustainable alternatives to current fuel supplies. Due to its ability to use a combination of sunlight, water and carbon from the air to produce energy, artificial photosynthesis is regarded as a potential breakthrough energy technology. It can be used to produce hydrogen or carbon-based fuels – collectively referred to as “solar fuels” – which offer an efficient and transportable means of storage of solar energy. Solar energy, in turn, can be used as an alternative to fossil fuels and as a feedstock for a wide range of industrial processes.

The device to be built needs to integrate the whole process from light capture to fuel production and be capable of powering a small engine. The production of fuel in the form of hydrogen and the use of conventional photovoltaic cells for the light harvesting process or to collect light and electrolysers are not permitted.

For the purpose of this prize, artificial photosynthesis (AP) is understood to be a process that aims at mimicking the physical chemistry of natural photosynthesis by absorbing solar energy in the form of photons. The solution is required to use this energy to generate fuel molecules through a synthetic system to be delivered as a single integrated device that utilises either biomimetic, nanotechnology, synthetic biology or a combination of these systems.

Meeting the challenge will stimulate innovation and focus research and development towards energy applications in a new energy technology through increased public and commercial interest. Moreover, it will accelerate the development of new innovative energy conversion systems using solar light and natural elements to produce renewable fuels to be used in industry, housing and transport.

The challenge will also create a stimulus for industrial participation and creation of start-ups, pushing the artificial photosynthesis technology for fuel production to the next level of development.

Considering the innovative approach and the novelty of using artificial photosynthesis for fuel production, the prize will generate interest in the subject and foster interdisciplinary collaboration among potential applicants, such as students, young researchers and engineers. The competition is expected to highlight the diversity of potential solutions.
The specific rules of the contest will be published in the fourth quarter of 2017 by the European Commission, which will directly launch and manage the contest and award the prize based on the judgement of independent experts.\textsuperscript{71}

Expected results

A number of innovative devices and systems demonstrating the use of sunlight to produce a fuel ready to be used.

Eligibility criteria

The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities.

Essential award criteria

The prize will be awarded to the contestant(s) who will, in the opinion of the jury, demonstrate a solution that best meets the following cumulative criteria:

- Degree of system integration from light capture to fuel production;
- Device/system performance;
- Production of fuel that will be used in an engine.
- Widest market potential.
- Commercial potential of the device

\textsuperscript{72} of which EUR 5.00 million from the ‘Access to Risk Finance’ WP part.
3. EIC Horizon Prize for 'Early Warning for Epidemics'

**Challenge**

The challenge is to develop a scalable, reliable, and cost-effective early-warning system prototype to forecast and monitor vector-borne diseases in order to contribute to the prevention of outbreaks, mitigating their impact on local, regional and global scales, and providing support to existing elimination efforts.

According to the World Health Organisation (WHO), vector-borne diseases such as malaria, Zika, dengue or yellow fever cause more than 1 million deaths globally each year. Vectors are living organisms that can transmit infectious diseases between humans or from animals to humans. Vector-borne diseases are a global threat to public health and can have far-reaching economic and social impacts.

Climate and environmental phenomena contribute to creating the necessary conditions for these kinds of diseases to thrive. Variables such as rainfall, temperature and humidity affect the number and survival rate of mosquitoes and other vectors of diseases.

The 2030 Agenda for Sustainable Development, in the context of its Sustainable Development Goal 3 "Ensure healthy lives and promote well-being for all at all ages", aims to end the epidemics of malaria and neglected tropical diseases (amongst others) by 2030. It calls for strengthening the capacity of all countries, in particular developing countries, for early warning, risk reduction and management of national and global health risks.

The Earth Observation domain is changing with increasing amounts of data being generated from space-borne, air-borne, in-situ and citizen observatories. Effective management of big data in this domain shall be an essential element in improving the 'early warning' capabilities of any system which aims to mitigate epidemics related to vector-borne diseases. The full potential of combining all the available data is not yet harnessed and innovative solutions are needed to enable the system's wider use and exploitation in this context. Such solutions would not only help to improve the 'preparedness' and response related to vector-borne disease outbreaks, but also foster the creation of a digital solution marketplace in the domain of environmental and climate health risks.

The specific rules of the contest will be published in the fourth quarter of 2017 by the European Commission, which will directly launch and manage the contest and award the prize based on the judgement of independent experts.73

**Expected results**

- A reliable, cost-effective and scalable early warning system prototype to

---

73 A pre-selection phase may be done by Commission services in case of numerous applications received.
forecast and monitor vector-borne diseases, which should encompass innovative technological solutions integrating big data derived from different sources (e.g. space-borne, airborne, in-situ and citizen observations) in Earth observation domain, including climate data, vector-related modelling, meteorology, and geo-located information related to vector-borne disease outbreaks and behaviour. These should be interoperable with public health data and other socio-economic data.

- Demonstration of the prototype at local level, taking into account any relevant societal factors in the chosen geographical area. It should be compatible for use with data coming from existing multi-disciplinary networks comprising health, humanitarian aid and emergency management actors, in order to leverage data and information from these networks, as well as to showcase the operational potential and added value of the solution.

**Eligibility criteria**

The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities.

**Essential award criteria**

The prize will be awarded, after closure of the contest, to the contestant(s) who, in the opinion of the jury, demonstrates a solution that best meets the following cumulative criteria:

- Operational capability and data integration.
- Demonstrated Implementation within an affected community.
- Scalability and sustainability of the Early-Warning Concept.
- Focus on European technology demonstration.

---

74 of which EUR 5.00 million from the ‘Access to Risk Finance’ WP part.
4. EIC Horizon Prize for 'Blockchains for Social Good'

**Challenge**

The challenge is to develop scalable, efficient and high-impact decentralized solutions to social innovation challenges leveraging Distributed Ledger Technology (DLTs), such as the one used in blockchains.

DLT in its public, open and permissionless forms is widely considered as a ground-breaking digital technology supporting decentralized methods for consensus reaching as well as sharing, storing and securing transactions and other data with fewer to no central intermediaries.

In the wake of the widespread public attention for Bitcoin, several financial applications based on blockchains are already under development. However, the potential of DLTs to generate positive social change by decentralising and disintermediating processes related to local or global sustainability challenges is still largely untapped.

Social application areas in which decentralized solutions based on DLTs have shown clear benefits over conventional centralised platform solutions include, but are not limited to:

- allowing for a greater visibility of public spending and a greater transparency of administrative and production processes;
- participation in democratic decision-making by enabling accountability, rewarding of participation and/or anonymity;
- enabling the development of decentralized social networks or clouds, or of decentralized platforms for the collaborative economy;
- managing property, land registry or other public records; and
- contributing to financial inclusion.

This challenge is targeted at a wide range of actors: individuals, social entrepreneurs, civil society organisations, research centres from technological and social disciplines, creative industries, students, hackers, start-ups and SMEs. Tackling this challenge requires a multidisciplinary expertise.

The specific rules of the contest will be published in the fourth quarter of 2017 by the European Commission, which will directly launch and manage the contest and award the prize based on the judgement of independent experts. The indicative budget for this prize is €5 million. This is expected to be...
allocated in five awards of €1 million each, corresponding to different social application areas.

**Expected results**

- Pioneering decentralized solutions to global and/or local sustainability challenges.
- Generating positive social change by making available novel solutions for decentralizing and disintermediating processes.
- Demonstrating the viability of solutions enabling a more even distribution and sharing of information and resources which respects privacy while providing levels of transparency.
- Stimulating the emerging community of developers and practitioners of "blockchains for social good" applications.

**Eligibility criteria**

The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities.

While entrants are free to commercially exploit applications and services based on the developed solutions, their source code is required to be released under an Open Source Licence.

**Essential award criteria**

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury demonstrate a solution that best meets the following criteria:

- Social impact: both potential and already achieved by the implementation of the solution (e.g. size of the community of users engaged by the actual implementation).
- Decentralisation and governance: improvements in transparency and accountability (while respecting privacy and/or anonymity).
- Usability and inclusiveness;
- Viability at large scale: cost-efficiency (including energy consumption), scalability, security, and sustainability;
- Clear added value of the demonstrated implementation for European citizens, in societal, economic or environmental terms.

These criteria, scoring and the weighting methodology, as well as the detailed timetable and conditions for participation, will be further defined in the Rules of Contest.

\textsuperscript{76} of which EUR 5.00 million from the 'Access to Risk Finance' WP part.
5. EIC Horizon Prize for 'Low-Cost Space Launch'

**Challenge**

The challenge is to develop a European technologically non-dependent solution for launching light satellites\(^{77}\) into Low-Earth Orbit (LEO), which will enable dedicated low-cost launches with committed schedule and orbit.

The solution needs to be innovative, implementable, affordable in development and exploitation phases, and commercially viable. Applicants are required to take a holistic approach and produce results that move beyond (but are complementary to) existing solutions. Moreover, the solution will enhance on European access to space and associated technological non-dependence and thereby will provide strategic and competitive advantages for European companies, SMEs, universities and research organisations.

Space technologies, data and services have become indispensable to the daily lives of European citizens. Moreover, development of space technology boosts jobs, growth and investments in Europe and strengthens its role in the world. Space solutions can help Europe to respond better to new global and societal challenges: climate change, disaster management, security threats, migration, farming, transport, energy and many more.

While Europe has a world-class space sector, innovation in space and changing demands are leading to an increased appearance of light and agile satellites. Consequently, space solutions will increasingly consider this trend. Small satellites are well-suited for most kinds of institutional and commercial use: wireless communications networks, Internet services, broader connectivity, scientific observation, data gathering, Earth imaging and positioning. In terms of size, light satellites rely on a lower mass in comparison with conventional satellites. Their production is more cost-effective due to series manufacturing, agility and flexibility in operations. However, light satellites will also lead to an exponential increase in launch needs by 2020-2025.

Launch opportunities in Europe for this type of satellites are currently being standardised through auxiliary payload or rideshare solutions on the European launcher fleet. However, according to market studies, light satellites are expected to lead to a significant increase in launch needs by 2020-2025.

An established service for regular launches dedicated to light satellites will contribute to achieve the following goals:

- internal market growth in the manufacturing sector of small satellites

---

\(^{77}\) Class 1 (mini sats): 200.1Kg – 400Kg, Class 2 (micro sats): 60.1Kg – 200Kg, Class 3 (nano sats, including 12U+): 25.1Kg – 60Kg, Class 4 (cubesats, including 1U, 3U, 6U): 1Kg – 25Kg.
launchers and satellites and the downstream services sector;

- European leading position in export markets globally in the field of light satellites and small launchers;
- space-enabled seamless solutions for European citizens thanks to operational light satellites and small launchers.

The specific rules of the contest will be published in the fourth quarter of 2017 by the European Commission, which will directly launch and manage the contest and award the prize based on the judgement of independent experts.\(^78\)

Expected results

- European low-cost access to space infrastructure and services solution dedicated to light satellites.

Eligibility criteria

The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities established in an EU Member State or in a country associated to Horizon 2020\(^79\).

Essential award criteria

The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury demonstrates a solution that best meets the following cumulative criteria:

- Excellence;
- Technical implementation;
- Service sustainability.

Type of action

€10 million from the 2020 budget\(^80\)

---

\(^78\) A pre-selection phase may be done by Commission services in case of numerous applications received.

\(^79\) The prize relates to the development of European critical space infrastructure, which is of strategic importance and security-critical for the Union and its Member States. Therefore: (1) participation in this prize contest will be limited to legal entities established in EU Member States and Countries Associated to Horizon 2020; (2) the rules of contest will: (a) stipulate that a proposal may be rejected for security reasons; (b) provide further details on the obligation to develop and deploy the solution in an EU Member State.

\(^80\) of which EUR 5.00 million from the ‘Leadership in Enabling and Industrial Technologies - Space’ WP part, EUR 5.00 million from the ‘Access to Risk Finance’ WP part.
6. EIC Horizon Prize for
'Affordable High-Tech for Humanitarian Aid'

Challenge

The challenge consists of developing innovative solutions for the delivery of humanitarian aid based on frugal application of advanced technologies.

The European Union and its Member States are major humanitarian donors. Humanitarian crises and disasters have increased in number, complexity and severity over the last 25 years. Given the scale of today’s crises and disasters, funding to cover humanitarian needs cannot keep up. The humanitarian system is being challenged to do more, for more people, and at greater cost. Cooperation between international organisations and NGOs responding to crises, end-users and local actors, research and scientific communities and the private sector is crucial in this respect. Introducing innovative solutions for the delivery of humanitarian aid could help enhance the humanitarian response, which is particularly important for those in a most vulnerable situation.

Solutions should be developed through a frugal innovation approach, and should be novel and based on advanced technologies and services, demonstrating the added value and potential of one or more advanced technologies (no Information and Communication Technology-only solutions). Tested and proven in a humanitarian aid delivery, these solutions should be safe, scalable, resource-sustainable, replicable and usable in other contexts.

Innovative solutions should be inclusive, i.e. co-created and developed by different stakeholders with local actors, and accessible to a large number of people in a given context of humanitarian aid delivery settings.

The specific rules of the contest will be published in the fourth quarter of 2017 by the European Commission, which will directly launch and manage the contest and award the prize based on the judgement of independent experts. The indicative budget for this prize is €5 million from the 2020 budget. This is expected to be allocated in five awards of €1 million, each in a different area such as shelter, water and sanitation, energy, heating or cooling, food, hygiene and medical care.

Expected results

- More cost-effective, more sustainable and higher-quality innovative solutions, leading to an optimised use of humanitarian funding and an enhanced response to urgent needs in a

---

81 A pre-selection phase may be done by Commission services in case of numerous applications received.
humanitarian aid setting, notably for those in a most vulnerable situation in areas such as shelter, water and sanitation, energy, heating or cooling, food, hygiene and medical care.

**Eligibility criteria**

The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities.

**Essential award criteria**

The prize will be awarded, after closure of the contest, to the contestants who, in the opinion of the jury, demonstrate a solution that best meets the following cumulative criteria:

- New solution tested successfully in a real environment, with a demonstrated potential of adaptability and scalability under different humanitarian aid settings and responding to the needs of those in a most vulnerable situation (taking age, gender, disability and minority into consideration).
- Quality and sustainability of the solution based on frugal application of advanced technologies, including the technological components (no ICT-only solutions).
- Affordability and improved cost-effectiveness for beneficiaries and organisations responding to crisis.
- Engagement with end users and perspective of a business case.

OTHER ACTIONS

EIC Support Actions
EIC Support Actions
What's on offer, and how you can benefit

EIC Support Actions build on initiatives started under the SME Instrument and will evolve during the pilot phase in the light of needs and demands.

1. EIC Evaluators’ and Ambassadors’ Community

As the EIC pilot matures, so too does the community of high-level EIC ambassadors, including former members of the EIC High-Level Group and members of the EIC Pilot Advisory Board as well as former EIC beneficiaries, expert evaluators and coaches. The Evaluators’ and Ambassadors’ Community will be created through various events and workshops in during 2019 and 2020 focused on explaining, clarifying and further developing the objectives of the EIC pilot. EIC ambassadors will be invited to participate as high-level speakers at these events as well as relevant events across the innovation ecosystem. Briefing materials, presentations and webinars will also be created and delivered.

Subject-matter of the contract(s) envisaged: preparation, execution and follow-up of events; design, delivery and evolution of media and information dissemination products and services.

Type of action: Public Procurement – using a framework contract - up to 20 specific service contracts.

Indicative timetable: fourth quarter of 2019 and 2020.

Indicative budget: €0.95 million from the 2018 budget, € 1 million from the 2019 budget and € 1 million from the 2020 budget.

2. EIC Community Platform

An interactive platform for SME Instrument beneficiaries was created under the Horizon 2020 work programme 2016-2017. The duration, functionalities and services provided through this platform will be extended to encompass all SMEs that are EIC grant beneficiaries.

The platform will be linked to platforms and projects offering services provided by InvestHorizon, such as investment-readiness training and introductions to investors, and by Start-up Europe, such as the Web Investors Forum, the Accelerator Assembly, and the Crowdfunding Network and the different services of the Enterprise Europe Network that are accessible via the Key Account Managers of the EIC beneficiaries. It will be supported till at least the end of 2020.
The action will support the extended community platform and its underlying activities, i.e.:

- **Promotion** through online and live interaction with potential investors, large enterprises, and public and private procurers, who will be able to create a profile on the platform for information-sharing and matchmaking.

- **Mentoring** through the creation of matchmaking profiles for mentors and mentees.

- **Participation in events** such as trade-fairs and major innovation or business conferences in Europe.

- **Access to existing services** offered by the Enterprise Europe Network (EEN), the EU Single Access to Finance Portal, the EU IPR Helpdesk, the European Observatory against Infringements of IPR, the Procurement of Innovation Platform, testing and demonstrating technologies (e.g. open innovation testbeds, digital innovation hubs) and other offerings at EU, national and regional levels such as the Thematic Smart Specialisation Platforms that could be of interest to participants in the EIC pilot.

- **Integration of data and insights from the Innovation Radar initiative** about EU–funded innovators and innovations, and acquisition of other financial, investment, patents and altmetrics data and analytics. This data will be leveraged to improve links between innovators with specific financing (or other 'go to market') needs and investors.

- **Procurement marketplace** to help companies, including EIC beneficiaries, to commercialise their innovations as first clients of public-sector innovation procurers, take advantage of public procurement opportunities, and better understand how the procurement market works and how to bid for procurements. Procurement opportunities published on the online marketplace and interaction with public procurers active on the platform will be open to all economic operators. There will also be activities to encourage public procurers to organise open-market consultations before procuring in order to give SMEs enough time to prepare bids and team-up with larger companies when bidding.

This is not necessarily an exhaustive list. Members of the EIC Evaluators' and Ambassadors' will also be invited to join and engage with the Platform and EIC beneficiaries

**Subject-matter of the contracts envisaged:** design, evolution and maintenance of online interactive platform; design, implementation and evolution of products and services delivered or deployed via the platform.

**Type of action:** Public Procurement — up to 30 specific service contracts (using a framework contract) and 1 direct contract.

**Indicative timetable:** first quarter of 2018 and first quarter of 2019.

**Indicative budget:** €1.50 million from the 2018 budget and €1.50 million from the 2019 budget.
3. EIC Events

EIC Events support international cooperation between highly innovative European SMEs and other entities both within Europe and in other parts of the world. They are designed to catalyse breakthrough innovations and speed up commercialisation.

A typical Event features investor pitching and a series of networking sessions and matchmaking socials to help you find potential collaborators, mentors, lenders and investors, corporate partners and public procurement opportunities. Members of the EIC Evaluators’ and Ambassadors’ Community will be invited to participate as, for example, workshop hosts, panellists or high-level speakers. Local universities and other public research organisations looking to commercialise research results are invited.

Each Event addresses innovation in the large, though some sessions may focus on particular sectors or geographies according to local circumstances and demand. To help SMEs get the most from participating in a Summit, follow-up support is available to facilitate business cooperation with other entities based either in or outside Europe.

Subject-matter of the contract envisaged: preparation, execution and follow-up of events.

Type of action: Public Procurement – one direct service contract linked to a framework contract.

Indicative budget: €0.55 million from the 2019 budget; €0.55 million from the 2020 budget.

4. Expert Group to advise on the design of a European Innovation Council

The High Level Group (HLG) of Innovators ('expert group') was established in January 2017 with a duration of two years. The mandate of the group ends in 2018, with high-level advice subsequently provided by the 'European Innovation Council (EIC)' Pilot Advisory.

The work of the expert group will build on early experience gained with the implementation of EIC pilot measures for the 2017-2018 period under Horizon 2020. Advice provided by the HLG will ensure future EU-level support for innovation takes advantage of existing best practices for innovation support in Europe and that it responds to the needs of entrepreneurs/innovators. The experts will have in-depth knowledge in the field of market-creating innovation and related financial instruments, national and regional innovation programmes, and start-up/scaling up of innovative companies.

The activities carried out by the group will be essential to the development and monitoring of the Union policy on Research, technological development and demonstration.
A special allowance of €450/day for each full working day spent assisting the Commission in terms of Article 21 of Decision C(2016)3301 will be paid to the highly qualified specialists appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Type of action: Expert Contracts.

Indicative timetable: 2018.

Indicative budget: €0.45 million from the 2018 budget.\(^3\)

5. Commission Expert Group 'European Innovation Council (EIC) Pilot Advisory Board'

The Commission will establish an ‘EIC Pilot Advisory Board’. This Board will have a mandate until the end of 2020, acting as a transition structure until 2021 when the formal EIC Board is expected to be appointed under next Framework Programme for Research. Its role will be to advise the European Commission on: the development and follow up of the current and planned EIC pilot actions in 2019 and 2020, in particular the substantive new initiatives to be launched in 2019; the overall strategy for the future EIC and the design of the funding and support, in line with the Horizon Europe legislation, and any matter which may enhance and foster innovation eco-systems across Europe, the achievements and impact of the objectives of the EIC component and the capacity of innovative firms to roll out their solutions.

The Board is expected to consist of 15 to 20 high level experts, from various domains of Europe’s innovation ecosystem, who will be appointed in a personal capacity, acting independently and in the public interest. The Commission will ensure a good mixture of high-level individuals including entrepreneurs who have started up and scaled up innovative enterprises at European/global level; investors, venture capitalists, individuals experienced in corporate venturing and corporate-start-up relationships, individuals with a strong track record in developing the wider innovation ecosystem, in particular in knowledge/technology transfer, in building start-up communities, and in managing innovation agencies/ incubators/ accelerators and researchers and academics with leading expertise in fields relating to future technologies.

EIC Pilot Advisory Board members will provide high-level advice to the Commission of such a nature that without their input the implementation of the Enhanced EIC Pilot and the development of the future definitive iteration of the EIC would not be effective. In light of this, and as highly qualified, specialised, independent experts selected following a public call for

\(^3\) Of which EUR 0.45 million from the 'Europe in a changing world – Inclusive, innovative and reflective societies' WP part.
applications, on the basis of objective criteria, it is justified that the members of the EIC Pilot Advisory Board shall be remunerated for the services they offer pursuant Article 21 of the above-mentioned horizontal rules on expert group.

They will be paid a special allowance of €450/day for each full working day spent assisting the Commission in terms of Article 21 of Decision C(2016)3301. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and the related preparatory work.

**Type of action:** Expert Contracts.

**Indicative timetable:** 2019 – 2020.

**Indicative budget:** €0.45 million from the 2019 budget and €0.45 million from the 2020 budget.

---

### 6. Using crowdfunding, artificial intelligence, blockchain and other novel approaches to help evaluate proposals for breakthrough and market-creating innovations

In fields as diverse as scientific research, entrepreneurship and the arts, crowds of interested stakeholders are increasingly responsible for deciding which innovations to fund, a task largely performed at present by business angels and venture capitalists, lenders or experts hired by grant-making bodies. Little is known about how much the crowd differs from investors, lenders or experts in judging which proposals to support, how rational the crowd is in making funding decisions, and what tools might best assist the crowd in this process. Artificial intelligence (AI) is also being tested in many areas as a complement to human judgment in making funding and investment decisions. In addition, experiments with using blockchain for managing and verifying business identities, records and transactions are underway. This study will examine the potential of using crowdfunding, AI, blockchain and other novel approaches to help evaluate close-to-market innovation-driven proposals, especially those submitted in response to the SME Instrument call.

**Type of action:** Public Procurement – one direct service contract.

**Indicative timetable:** first quarter of 2018.

**Indicative budget:** €0.15 million from the 2018 budget.
7. Strengthening the organisation and management of the Enhanced EIC pilot

The transition to the enhanced EIC pilot and preparation of the launch of the full-fledged EIC under Horizon Europe requires the strengthening of the organisation and tools of EIC operational management, notably through the development of specific IT tools and exchange of experience with and learning from similar programmes.

Consultation of external stakeholders will be required in order to ensure that the instrument is best fitted to the needs of the European innovation ecosystem, in particular breakthrough market-creating innovation.

Technical assistance
Technical assistance will be required in order to develop specific IT tools in support of the evaluation and project management process (including exchange of data and operational liaison with the EIC Fund).

Type of action: Public Procurement – use of existing framework contracts.
Indicative budget: €0.5 million from the 2019 budget.

Workshops
Upon recruitment of EIC Programme Managers, a cycle of workshops will be set-up, with the participation of experienced external professionals managing programme and project in the area of breakthrough technologies and market creating innovation. This cycle will include events in organizations implementing activities similar to the EIC, in Europe but also in the United States.

Type of action: Public Procurement — one direct contract.
Indicative budget: €0.05 million from the 2019 budget.

Experts
An expert group will be set up to convey the experience of other frameworks that served as an inspiration for the EIC enhanced pilot set up and will assist the Commission in better developing the role of Programme Managers and shaping relevant processes.

Up to 10 experts, appointed in a personal capacity, acting independently and in the public interest, will be paid a special allowance of €450 / day for each full working day spent assisting the Commission in terms of Article 21 of Decision C(2016)3301. This amount is considered to
be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and the related preparatory work.

**Type of action:** Expert contracts.

**Indicative timetable:** second half of 2019 - 2020.

**Indicative budget:** €0.05 million from the 2019 budget and EUR 0.1 million from the 2020 budget.

### 8. Capacity-building and transnational cooperation for National Contact Points (NCPs) for the EIC and Access to Risk Finance

This grant will facilitate transnational cooperation between NCPs focused on the Horizon 2020 EIC Pilot and the specific objective ‘Access to Risk Finance’. This action aims at identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituency of the EIC.

The action will involve one consortium of formally nominated NCPs in the areas of ‘Future and Emerging Technologies’, ‘Innovation in SMEs’ or ‘Access to Risk Finance’.

Activities should deliver tangible benefits to potential applicants to calls under the EIC and Access to Risk Finance. Activities should capitalise on relevant work of previous or ongoing NCP network projects, and of the ‘NCP Academy’ (www.ncpacademy.eu). They should also seek to enhance synergies across different parts of the framework programmes, for instance with the ERC, the EIT and financial instruments, and complementarity with activities of other NCP networks and the Enterprise Europe Network in the domain of SMEs support. Various mechanisms may be included, such as benchmarking, joint workshops, enhanced cross-border brokerage events, common roadshows in relevant research and innovation events, and specific training linked to particularities of the EIC Pilot.

Where relevant, activities should make use of commonly available tools (e.g. for brokerage and partner search, benchmarking tools, guidebooks, promotional tools, etc.). Special attention should be given to enhance the competence of NCPs across Europe ensuring a homogenous level of support in all countries.

To help close the innovation divide, a substantial component of the proposed activities must be devoted to outreach and support activities aimed at helping potential applicants in those countries that have been participating at low levels in the programme up to now. These activities should not only help the NCPs rapidly acquire the know-how on NCP operations accumulated in best practice countries but should include in priority awareness raising actions aimed at increasing visibility of the EIC Pilot to potential applicant organisations in the above mentioned countries.
The legal entities listed below are the host organisations of NCPs from EU Member States and Associated Countries who have been officially appointed by the relevant national authorities, and who have expressed a willingness to participate in this proposal. NCPs opting not to be a beneficiary are nevertheless invited and encouraged to participate in the project activities (e.g. workshops), and costs for such participation (e.g. travel costs paid by the consortium) may be included in the estimated budget and be eligible for funding by the Commission.

Organizations participating in the consortium must at least include two NCPs formally nominated for ‘Future and Emerging Technologies’ and ‘Innovation in SMEs’ or ‘Access to Risk Finance’. FET NCPs will cover the Pathfinder Pilot.

In line with Articles 2, 31.6 and 41.4 of the Model Grant agreement, the project arising from this grant will complement other NCP network projects. This means that the beneficiaries and those of the complementary grants must cooperate and provide access to their results. They must conclude a written collaboration agreement regarding the coordination of the complementary grants and the work of the action.

The standard evaluation criteria, thresholds, weighting for award criteria and the maximum rate of co-financing for this type of action are provided in General Annexes D and H of the work programme.

**Expected impact:**

- An improved, more consistent and professionalised NCP service across Europe, thereby helping simplify access to EIC Pilot calls, and lowering the entry barriers for newcomers.

- An increase in the quality of proposals submitted, including those from countries where success rates are currently lower than average.

Type of action: Grant to identified beneficiary - Coordination and support action.

Indicative timetable: Q3 2019.

Indicative budget: €0.75 million from the 2019 budget, €0.25 million from the 2020 budget.

9. Ensuring greater synergies by testing new collaboration mechanisms between the EIT Innovation Communities and the Enhanced EIC Pilot in support of the Green Deal and other Union policy priorities

Driving the new Commission’s priorities is the need to address the changes in climate, technology and demography that are transforming our societies and way of life aiming at an economy that works for people. The proposal for a European Green Deal put forward by the European Commission aims to make Europe the world’s first climate-neutral continent by investing in research and innovation.

The Innovative Europe pillar in the proposal for the next EU research and innovation programme (Horizon Europe) establishes a series of ambitious measures to stimulate market-creating breakthroughs and support ecosystems conducive to innovation. These objectives are to be pursued through the creation of a European Innovation Council (EIC) and through support to the European Institute of Innovation and Technology (EIT) and the wider European innovation ecosystems.

The proposal sets out a comprehensive and highly integrated strategy to achieve greater impact. To this end, the European Commission will ensure complementarity and cooperation between the EIC and the EIT to avoid duplication, in line with the conclusions of the European Parliament’s legislative resolution of 17 April 2019. The Accelerator is foreseen to allow for take-up of innovations stemming from other pillars of the EU Framework Programmes, including start-ups supported by the EIT. In practice, support schemes provided by the EIT should benefit to EIC beneficiaries, while start-ups emerging from the EIT Innovation Communities should have access to EIC actions.
The action proposed under this update to the Horizon 2020 Work Programme will pilot mechanisms by which the most innovative businesses stemming from the EIT Innovation Communities may be channelled to the Enhanced EIC Pilot, creating a pipeline of impactful innovations. This is particularly the case for innovative businesses addressing Green Deal goals, for example from the EIT InnoEnergy and the EIT Climate-KIC, and the Europe fit for Digital Age priority, in particular from the EIT Digital. In addition, the actions will explore how EIC-funded innovators may benefit from the support of the EIT Innovation Communities, provided they are not already connected to them.

This action may also test how to promote and extend the benefits of the EIT Innovation Communities business acceleration programmes to projects that have received the ‘Seal of Excellence’84. Moreover, the action should foresee measures to encourage the EIT’s innovators to apply to the Enhanced EIC Pilot. It will also explore possibilities and modalities of co-investment in the context of the EIC Accelerator pilot.

Ultimately, it will help design the future collaboration mechanisms between the fully fledged EIC and the EIT Innovation Communities, and to promote and exploit all possible synergies between the two under Horizon Europe, including via pilot actions. This action could further explore mechanisms that could be used in future for the EIT supported companies to access the EIC Accelerator.

The EIT Innovation Communities support innovators and entrepreneurs developing world-class solutions to societal challenges. The EIC Pilot is mainly bottom-up. This action will also help define the best means to identify eligible companies, according to the societal challenge addressed by a particular EIT Innovation Community.

The provision by the EIT Innovation Communities of business creation and acceleration services and co-investment opportunities will be tested with four Innovation Communities under the EIC Pathfinder Pilot and/or under the Accelerator Pilot. Activities should deliver tangible benefits to the EIC Pilot.

After completion of this action, innovators supported by the action may be invited to join the advanced accelerating services programmes offered by the EIT Innovation Communities to support the projects’ continued growth.

In this context, close links will be established between the EIT Innovation Communities involved in the action and the EIC Pilot Business Acceleration Services to ensure coordination, avoid duplication and explore all possible synergies.

In addition, the action will include networking and matchmaking activities to increase the connectedness among the broad innovation ecosystems players around the EIT Innovation Communities and the innovators' ecosystem provided by the EIC.

The standard evaluation criteria, thresholds, weighting for award criteria and the maximum rate of co-financing for this type of action are provided in General Annexes D and H of the work programme.

The Commission will fund four proposals of up to EUR 1 million each under this action, for an initial duration of 12 months. The cooperation with EIT InnoEnergy will focus specifically on low carbon energy solutions, while cooperation with EIT Climate-KIC will be of a broader scope (i.e. to ensure that actions of the two Innovation Communities are complementary). This action will also explore the cooperation with EIT Digital and EIT Health in support of the Commission priorities.

Expected impact:

- A tested mechanism of coordination between the EIC Pilot and the EIT Innovation Communities exploiting all possible synergies between the two to be further deployed under Horizon Europe.

- Support a significant number of innovators funded by the EIC Pilot that are not already connected to one of the identified EIT Innovation Communities.

- Support a significant number of innovators funded by the EIT Innovation Communities that are not already connected to the EIC Pilot, to test and demonstrate a future collaboration mechanism under Horizon Europe.

Legal Entities:

- KIC InnoEnergy S.E., Kennispoort, John F. Kennedylaan 2, 5612 AB Eindhoven, The Netherlands
- Climate-KIC Holding B.V., Kattenburgerstraat 7, 1018 JA Amsterdam, The Netherlands
- EIT Digital, Rue Guimard 7, 1040 Brussels, Belgium
- EIT Health E.V., Mies-van-der-Rohe-Str 1C, 80807 Munich, Germany

Type of Action: Grants to 4 identified beneficiaries - Coordination and Support Action.

Indicative timetable: Q1 2020 (EIT Climate-KIC and EIT InnoEnergy) and Q2-Q3 2020 (EIT Digital and EIT Health).

Indicative budget: EUR 4 million from the 2020 budget (1 million each).

10. EIC Scalator Pilot

Only 5% of European start-ups scale-up and pursue the position of world tech leaders. As high growth companies are the ones largely responsible for job creation and economic benefit, this is a missed opportunity. These growth barriers are even higher for truly high-risk deep tech innovators, the main target of EIC instruments. Considering the high-tech characteristics of the EIC beneficiaries, which have a longer time to market than digital start-ups, access to a broader pan-European enterprise market is a key factor to succeed. Following their initial funding rounds provided by the Pathfinder and the Accelerator instrument (seed- and series
A funding rounds), the EIC Scalator will focus on beneficiaries which are ready for funding rounds above EUR 50 million (series C). The support will be provided by offering specialised and highly personalised advice and coaching and creating meaningful connections with other ecosystems players.

This EIC Scalator Pilot aims at accelerating investments and partnerships among the most mature EIC beneficiaries and create European deep-tech success stories (sustainable global deep-tech leaders) by connecting relevant EIC beneficiaries to corporates (private buyers, Mergers and Acquisition, Corporate Venture Capital), to investors (including National Promotional Banks and Institutions (NPBIs) or/and Regional Banks) that provide strong networks and late stage investment (equity or venture debt), to international markets, and to stock exchanges. No direct financial support will be provided by the Scalator to the EIC beneficiaries. If any third party offers financial support to the EIC beneficiaries that are part of the EIC Scalator pilot, these investment will have to comply with the relevant national of EU regulation (including state aid whenever relevant).

The EIC Scalator Pilot is a pilot for a new kind of support services targeted to scaleups in series C and above that will be a fundamental part of the future services provided by the European innovation Council in Horizon Europe and InvestEU. The EIC Scalator Pilot will pilot a new type of individualised services to address the needs of companies which have the potential to become as much as unicorns and for which the existing BAS services are not sufficient.

The EIC Scalator Pilot will provide support to up to 30 EIC beneficiaries that comply with the relevant selection criteria, such as: annual growth potential circa 50 - 100%; validated, repeatable, scalable business model; significant revenue traction; driven by deep-tech innovation that disrupts existing market(s); having the ambition to expand in new markets (geographical/sectoral); potential to expand internationally (ratio of foreign customers, revenue from international markets, number of markets outside domestic market); and commercially self-sufficient. The EIC Scalator Pilot will be linked in the EIC Community Platform, as well as with the EIC Fund.

Eligibility criteria: The call is open to any legal entity (including natural persons) or group of legal entities established in an EU Member State or in a country associated to Horizon 2020.

Expected impact:

- A well tested EU model for scaling services to foster substantial growth of deep-tech innovators that will increase their number and value of commercial deals, investments deals and IPOs/acquisitions.

- To support EIC beneficiaries in their growth phase to become sustainable global deep-tech leaders.

Type of Action: Coordination and Support Action.
11. Creating and nurturing early-stage investment ecosystems in the EU

A successful European Innovation Council depends on a high-quality and permanent deal flow. Business angels, given their involvement in early stages of companies', play a crucial role in coaching such emerging companies and supporting their development, and therefore also in potentially feeding the EIC with high-quality applications.

This action aims to strengthen the innovation and investment ecosystems for start-up and scale-up companies in the EU in view of their development and growth, chiefly by supporting groups/syndicates of angel and other early-stage investing. This will be achieved by:

- Stimulating the creation and nurturing of business angel groups in countries where they remain absent or weak (e.g. developing capacity-building programmes such as trainings and twinning programmes spurring knowledge transfer between well established and nascent rudimentary business angel groups; and providing consulting services to advise national/regional authorities on setting-up early-stage investment ecosystems);
- Stimulating the creation and nurturing of angel investing groups/syndicates dedicated to the promotion of Green Deal and sustainable development objectives;
- Connecting angel investors across Europe to support deal-flow generation and cross-border investments that can decisively help companies to scale-up in the EU (as the internal market is still fragmented by fiscal and legal obstacles) and then abroad; this could take the form of a trusted European community for angel-backed operations and more standardised term sheets;
- Also in relation to the previous point, preparing an impact assessment on the potential creation by the Commission of a public co-investment fund with leading business angels groups/syndicates in the EU, and advising on its legal form, governance, management, investment guidelines, etc.;
- Strengthening the connection between start-ups/scale-ups and angel investors (e.g. by organising regular pitching, networking and discussion events);
- Coaching well targeted research projects financed by the EU on how to further develop innovations in view of their future commercialisation (e.g. through bi-annual events connecting research projects with business angels);
- Engaging financial organisations such as national promotional banks and institutions in supporting the creation of an interconnected angel ecosystem as part of a healthy innovation ecosystem;
- Raising awareness amongst start-ups/scale-ups and other relevant players about the importance of business angels for a successful innovation ecosystem;
- Reporting annually on the critical elements needed to boost and better integrate innovation ecosystems across the EU, how to address existing barriers preventing their

---

85 For simplicity reasons, we will refer only to angel investing from now onwards.
thriving, and how European and national financial instruments can better support these goals;

- Reporting (at least) bi-annually on the maturity and level of the angel investing market in the EU and Member States, namely by developing appropriate and international benchmarks, analysing their trends, and assessing national and regional thematic clusters of angel investors.

The outcome of the ‘Awareness-raising and capacity-building for business angels and other early-stage investors’ Coordination and Support Action launched under the Horizon 2020 Work Programme 2016-2017 must be taken into account\(^{86}\). Furthermore, proposals shall coordinate actions with relevant ongoing initiatives and organisations such as those managed by Business Angels Europe, European Business Angel Network, and Invest Europe.

**Expected impact:**

- Strengthen the innovation and investment ecosystems for start-up and scale-up companies in the EU, particularly where they remain weak or undeveloped;
- Give rise to consistent groups/syndicates of business angels in countries/regions where they are still absent or are too rudimentary;
- Increase the level of support to early-stage companies in view of their development and scale-up, particularly in a cross-border context;
- Raise awareness on angel investing in Europe with robust indicators and reports, and advise the Commission on how to improve the innovation and investment ecosystems.

**Type of Action:** Public Procurement – one direct service contract.

**Indicative timetable:** Q2 2020. Duration: 30 months.

**Indicative budget:** EUR 2 million from the 2020 budget.

\(^{86}\) CBBA-01-2016.
12. Procure the pilot of an AI based fully automated system to provide better guidance and support to proposers, and enhance the evaluation, selection and project management processes of the EIC

Over the last years, the continuous progress in Artificial Intelligence (AI) combined with enhanced capacities to manage and analyse big data, has developed possibilities for organizations to make more informed decisions.

With reference to challenges to be tackled by the future EIC under Horizon Europe, AI-based fully automated systems could enhance its capabilities to better guide and support innovators among European but also national funding possibilities and reinforce its evaluation processes. Digging in past and running projects (European and national), scientific publications, IP patents and market analysis, the in depth assessment of hidden patterns and unknown correlation between technological leads, market trends and customer preferences could significantly enhance EIC’s capabilities to detect potential disruptive or market-creative innovation, and qualitatively enhance technological validation of proposals received, which is key for innovators and investors.

As a mean to explore the possibility to launch such an ambitious action under Horizon Europe, the EIC will get the services of a pilot AI-based automated system offering the following features:

- orient proposers among relevant funding opportunities (European and national) and provide qualitative feedback on their idea/proposal (pertinence/relevance, innovativeness, partners search, relevant indicators, etc.) in relation to last EIC pilot calls (Accelerator and Pathfinder)
- provide in-depth data analysis and assessment to independent experts in support of the evaluation process, and to Programme Managers for the clustering of projects (Pathfinders’ portfolios) and project management.

Should the pilot prove successful, the Commission may consider to have access to a more ambitious tool or service for Horizon Europe, offering additional features (e.g. assisting proposers in preparing and writing their proposal for whatever European or National public funding scheme), also to the benefit of National innovation agencies.

**Expected impact:**

Providing such a common tool would be a contribution of the Union to the European innovation ecosystems’ activities provided for in Horizon Europe third pillar, as a mean to harmonize and enhance these and provide a high-quality level playing fields to innovators across Europe.

**Type of action:** Public Procurement – one service contract.

**Indicative timetable:** Q2 2020. Duration: 12 months.
**Indicative budget:** EUR 0.6 million from the 2020 budget.

### 13. Mutual learning and common tools and resources for national/regional schemes supporting innovation projects of start-ups and SMEs

**Challenges and objectives**

Start-ups and Small and Medium-sized Enterprises (SMEs) are the primary source of innovation in Europe and globally. However, they very often lack resources (human and financial) to elaborate the feasibility study of innovative products/services, which would clearly demonstrate the ways for their further directions and concrete steps to follow. Moreover, they are at a disadvantage to recruit external experts to help them in their innovation and business development, including at a transnational level to exploit the potential of the Single Market and of global trade opportunities. Both are essential for start-ups and SMEs to ensure product/market fit, successful launch and later scaling of their innovations.

There is a clear rationale to provide support to European start-ups and SMEs for these activities. This is best done close to beneficiaries at national and regional levels. A number of national/regional innovation agencies have schemes that tackle this specific need or consider setting one. However, in order to select and support effectively the most promising innovators with strong potential on European and world markets, these agencies would strongly benefit from transnational mutual learning and common tools and resources, as up to now national and regional innovation agencies operate rather in isolation across EU in relation to the implementation of their programmes. The fragmentation of innovation ecosystems and the lack of connectedness among public national and regional agencies appear to be one of the main bottlenecks towards ensuring the support of the most promising start-up and scale-up companies in the EU.

The aim of this action is to create an enhancing, supporting and cooperative environment across EU that will allow national and regional agencies to provide high-level services and support high-quality start-ups and SMEs for their innovation projects. The ultimate goal is to provide the opportunity to these agencies to cooperate, learn from each other and exchange knowledge by using join tools in order to ensure that the most promising high-potential innovation proposals of start-ups / SMEs are supported at their critical stage of development.

**Scope**

This pilot action is to enhance cooperation of innovation agencies in the European innovation ecosystem. It aims to support the creation and operation of national and/or regional support schemes regarding feasibility studies and external expertise for innovative projects of start-ups and SMEs. The pilot action will focus on transnational mutual learning and on the development of common tools and resources for these schemes.
The cooperation should focus on:

- Exchange of information and best practices on the design and specific needs of the programmes on national/regional levels with the view of filling possible gaps in EIC.
- Exchange of information and best practices on the design of the project proposal and weight of the criteria.
- Internationalisation of evaluation panels. Exchange of information, best practices with regards to the project evaluators. The cooperation shall also enable accesses to respective pools of evaluators in order to set international evaluation panels.
- Establishment of minimum set of common assessment criteria.
- Exchange of information, best practices with regards to coaching services and selection of coaches, including access to existing databases of coaches (EU, national, regional) and possible creation of pools of coaches. Optionally, design and development of other common tools and resources.
- Sustainability after the end of the action.

The established schemes could include the following:

- Common tools and resources to support close-to-market activities with the respective budgets of the national innovation agencies. The national resources deployed by national innovation agencies, if relevant, will need to comply with State Aid competition rules
- Common tools and resources to support highly innovative start-ups and SMEs with a clear commercial ambition and a potential for high growth and internationalisation
- Feasibility study as an outcome of the project (not necessarily the only one)
- International pool of evaluators of the projects
- Short market-oriented project proposal form
- Introduction of other supportive services, including coaching services to the beneficiaries
- Follow up of the beneficiaries and advice services concerning other possible instruments on national/regional/EU levels

**Expected impact**

Enhance the quality of support provided at national and regional levels to the most promising innovative start-ups and SMEs, by enabling:

- the national/regional agencies to establish or improve schemes from their respective budgets that will cover the feasibility study stage of innovative products/services from start-ups and SMEs;
- transnational cooperation in evaluation processes to select the most promising innovation projects with high growth and international potential;
- cooperation between national/regional/EU levels in ensuring “world-class” coaching/mentoring services;
- exchange of information and best practice and closer dialogue between the innovation agencies involved.

Type of Action: CSA.

Indicative budget: EUR 0.5 million from the 2020 budget (one proposal will be funded under this pilot action, which should notably involve the participation of national or regional innovation agencies or similar organisations).
## Budget\textsuperscript{87} for European Innovation Council pilot

<table>
<thead>
<tr>
<th>Calls</th>
<th>Budget-line</th>
<th>2018</th>
<th>2019</th>
<th>2020</th>

<td>489.74</td>
<td>689.26</td>
<td>969.04</td>
</tr>
</tbody>
</table>

\textsuperscript{87} The budget figures given in this table are rounded to two decimal places.

\textsuperscript{88} The budget dedicated to the EIC Accelerator pilot / SME Instrument calls is financed from the single budget-line 08.020800 for a total, at minimum for the period 2018-2020, of €1,611.52 million, of which at least €160.50 million stems from 'Industrial leadership - Leadership in nanotechnologies, advanced materials, biotechnology and advanced manufacturing and processing', €305.73 million from 'Industrial leadership - Leadership in information and communications technology', €57.93 million from 'Industrial leadership - Leadership in space', €248.47 million from 'Societal Challenge 1 - Improving lifelong health and wellbeing', €129.54 million from 'Societal Challenge 2 - Securing sufficient supplies of safe and high-quality food and other bio-based products', €233.61 million from 'Societal Challenge 3 - Making the transition to a reliable, sustainable and competitive energy system', €236.92 million from 'Societal challenge 4 - Achieving a resource-efficient, environmentally-friendly, safe and seamless European transport system', €108.82 million from 'Societal challenge 5 - Achieving a resource-efficient and climate change resilient economy and a sustainable supply of raw materials', €51.38 million from 'Societal challenge 6 - Fostering inclusive, innovative and reflective societies', and €67.65 million from the 'Societal challenge 7 - Fostering secure European societies' WP parts. In 2020, the contribution from the single budget-line 08.020800 will be increased for a total of €649.04 million, of which €63.65 million stems from 'Industrial leadership - Leadership in nanotechnologies, advanced materials, biotechnology and advanced manufacturing and processing', €124.39 million from 'Industrial leadership - Leadership in information and communications technology', €23.62 million from 'Societal challenge 4 - Achieving a resource-efficient, environmentally-friendly, safe and seamless European transport system', €98.99 million from 'Societal Challenge 1 - Improving lifelong health and wellbeing', €55.87 million from 'Societal Challenge 2 - Securing sufficient supplies of safe and high-quality food and other bio-based products', €94.92 million from 'Societal Challenge 3 - Making the transition to a reliable, sustainable and competitive energy system', €129.54 million from 'Societal challenge 5 - Achieving a resource-efficient and climate change resilient economy and a sustainable supply of raw materials', €20.56 million from 'Societal challenge 6 - Fostering inclusive, innovative and reflective societies', and €27.66 million from the 'Societal challenge 7 - Fostering secure European societies' WP parts. While these amounts are indicatively dedicated to the respective domain concerned, the EIC Accelerator pilot / SME Instrument will mainly operate bottom-up and its budget will, as a whole, support firms developing the breakthrough, market-creating innovations that can occur, in particular at the intersection between different technologies, industry sectors and scientific disciplines.

\textsuperscript{89} In 2020, the EIC Accelerator pilot will remain mainly bottom-up by dedicating more than 60% of the yearly budget to 3 bottom-up cut-off dates (8 January, 18 March and 7 October 2020). In addition, it will also contribute to the “Green Deal” initiative by allocating at least €300 million through a dedicated cut-off date (19 May 2019).

\textsuperscript{90} In 2020, the EIC Accelerator pilot / SME Instrument calls is financed from the single budget-line 08.020800 for a total, at minimum for the period 2018-2020, of €1,611.52 million, of which at least €160.50 million stems from 'Industrial leadership - Leadership in nanotechnologies, advanced materials, biotechnology and advanced manufacturing and processing', €305.73 million from 'Industrial leadership - Leadership in information and communications technology', €57.93 million from 'Industrial leadership - Leadership in space', €248.47 million from 'Societal Challenge 1 - Improving lifelong health and wellbeing', €129.54 million from 'Societal Challenge 2 - Securing sufficient supplies of safe and high-quality food and other bio-based products', €233.61 million from 'Societal Challenge 3 - Making the transition to a reliable, sustainable and competitive energy system', €236.92 million from 'Societal challenge 4 - Achieving a resource-efficient, environmentally-friendly, safe and seamless European transport system', €108.82 million from 'Societal challenge 5 - Achieving a resource-efficient and climate change resilient economy and a sustainable supply of raw materials', €51.38 million from 'Societal challenge 6 - Fostering inclusive, innovative and reflective societies', and €67.65 million from the 'Societal challenge 7 - Fostering secure European societies' WP parts.

\textsuperscript{91} For the period 2018-2020, the contribution from the Access to Risk Finance programme (budget-line 08.020202) to the blended-finance dimension of the EIC Accelerator pilot (i.e. for equity support through the EIC Fund) will be of a minimum of €100 million (i.e. €10 million in 2018, €37 million in 2019 and €53 million in 2020). In 2020 the contribution from the budget-line 08.020202 will be increased to €170 million (i.e. + €117 million) to reach a total for the period 2018-2020 of €217 million.

<sup>92</sup> The FTI Pilot call is financed for a total of €300 million (€100 million per year of implementation), of which at least €30.3 million was originally assigned to ‘Industrial leadership - Leadership in nanotechnologies, advanced materials, biotechnology and advanced manufacturing and processing’, €53.45 million to ‘Industrial leadership - Leadership in information and communications technology’, €10.11 million to ‘Industrial leadership - Leadership in space’, €52.25 million to ‘Societal Challenge 1 - Improving lifelong health and wellbeing’, €26.70 million to ‘Societal Challenge 2 - Securing sufficient supplies of safe and high-quality food and other bio-based products’, €40.96 million to ‘Societal Challenge 3 - Making the transition to a reliable, sustainable and competitive energy system’, €44.28 million to ‘Societal challenge 4 - Achieving a resource-efficient, environmentally-friendly, safe and seamless European transport system’ and €21.28 million to ‘Societal challenge 5 - Achieving a resource-efficient and climate change resilient economy and a sustainable supply of raw materials’, €9.06 million to ‘Societal challenge 6 - Fostering inclusive, innovative and reflective societies’ and €11.61 million to ‘Societal challenge 7 - Fostering secure European societies’ WP parts.

<sup>93</sup> The FET Open call is financed from the ‘Strengthening research in future and emerging technologies’ WP part.

<sup>94</sup> The amounts are for those FET Proactive topics that are part of the European Innovation Council enhanced pilot.

<sup>95</sup> The increase by 45.4 million for the 2019 budget is subject to the availability of the appropriations provided for in the ‘Draft Amending Budget No 2 on the Reinforcement of Key programmes for EU competitiveness: Horizon 2020 and Erasmus+’, COM(2019)520 of 15.5.2019, after the adoption of the Amending Budget by the budgetary authority.

<sup>96</sup> EIC Horizon Prizes are financed for €30.00 million from the ‘Access to Risk Finance’ WP part, for €5.00 million from the ‘Nanotechnologies, Advanced Materials, Biotechnology and Advanced Manufacturing and Processing’ WP part and for €5.00 million from the ‘Leadership in Enabling and Industrial Technologies - Space’ WP part.

<sup>97</sup> Public procurements are financed for €10.20 million from the SME instrument budget line and for €0.15 million from the ‘Access to Risk Finance’ WP part.

<sup>98</sup> This action is financed from the ‘Europe in a changing world – Inclusive, innovative and reflective societies’ WP part.
