EU Skills Profile Tool for Third Country Nationals

A multilingual and free-for-use Tool intended for organisations offering assistance in mapping the skills and experiences of third country nationals.

This document presents three ways in which the functionalities of the Tool can be combined with other systems:

1

Use the exportable electronic profile formats from the webbrowser of the Tool in your own system

Excel and / or XML

The questionnaire can be exported to Excel and to (machine-readable) XML formats. Specific information from profiles can be imported into other applications or documents and different profiles can be merged into one file.

Export profile in Excel or XML → Save to local computer or database → Use parts or copy relevant sections to enrich local databases or documents

2

Customise the EU Skills Profile Tool by adding or changing questions or by modifying the Source Code.

Open Source

The EU Skills Profile Tool can be fully customised easily by using the Configuration part of the Tool. Further changes to the look and feel of the tool and the functionalities can be made by modifying the **Open Source Code.**

Download the Open Source Code here:
https://tinyurl.com/rpk2hro

Front-End → Angular | Java Spring Boot ← Back-End

- Build your own customised version of the Tool by changing specific parts of it.
- Reuse part of the questionnaire from the Source Code of the Tool in your own system.

3

Enrich your existing Skills Profile(s) with features of the Europass portal and be connected to other Europass functionalities.

Europass interoperability*

Interoperability between the EU Skills Profile Tool and Europass will be increased to support a smoother transition between the functionalities of the tools.

*Forthcoming 2022

Provide the option to export an EU Skills Profile to a Europass CV format.

When creating a Europass CV or e-Profile, reuse the EU Skills Profile as starting point (import)
