## Introduction

The Eurostat Labour Market Policy (LMP) database collects information on labour market interventions implemented by each of the EU Member States and Norway. Data are collected according to a comprehensive methodology, which classifies interventions into three main types – services, measures and supports – and into nine detailed categories according to the type of action (see below). Readers are recommended to refer to the LMP methodology <sup>1</sup> for details of this classification scheme and definitions of terms used in this report.

The LMP database collects quantitative data on expenditure and participants for each intervention. These are published annually and are available online from the Eurostat website <sup>2</sup>. The quantitative data are complemented by a set of qualitative information describing each intervention. This represents an invaluable source of reference to support a harmonised approach to the classification of national interventions and to help interpret the detailed figures on expenditure and participants. These qualitative data are compiled into a series of **Labour market policy statistics: Qualitative Reports** and produced as separate volumes for each country/year.

The reports all have the same structure:

- Part A Introduction

- Part B Inventory of interventions - a list of all interventions reported for the relevant year, grouped by type of action and including a national language version of the intervention name.

- Part C Qualitative information by intervention - presents the available information about each intervention in three sections: *Identification*, *Description*, and *Supplementary information*. The *Description* contains seven sub-sections: Aim, Beneficiaries/participants, Action/instrument, Financing/support, Eligibility, Legal basis, and Recent changes. The *Supplementary information* contains eight sub-sections describing the breakdown of expenditure, target groups, the treatment of unemployment spells, receipt of benefits, planned duration and other characteristics of the intervention. Together, these items summarise the qualitative information collected through the LMP questionnaire.

- Part D Reference data - provides a description of the populations considered as reference data within the LMP database, giving national definitions of those considered as registered unemployed and other groups registered with the public employment services (PES).

- Part E Abbreviations

The qualitative information in the LMP database is updated annually with the contribution of delegates from each country and Eurostat cannot take responsibility for the validity of the content. The reports are published annually by Eurostat in English and reports for other years that are not currently in the online library can be produced on request.
