ERTMS Corridor route comparison

This document consists of a rough comparative overview of different corridors (both study-based and operational) in relation to the six ERTMS Corridors. The route of ERTMS corridors is based on the ERIM network.

Comparison is made with TEN-T Priority axes, RNE corridors, CER Business Cases for a Primary European Rail Freight Network, and TREND.

The purpose of the document is to provide a comparison which visually illustrates similarities and difference in the corridor routes.

In some cases available information was vague and so the degree of detail varies slightly.

Legend

- **Ljubljana**: ERTMS Corridor node
- **Antwerpen**: Node not on the ERTMS corridor in comparison
- **Genova**: ERTMS Corridor node which is planned on the comparative corridor
