Introduction

Background

Making urban centres as accessible as possible requires local decision makers to prioritise the use of urban space according to local needs and circumstances. Similarly, local competent transport authorities need to decide on how to make the best possible use of the existing expensive transport infrastructure and maximise the accessibility of cities for passengers and freight.

Towns and cities across Europe are considering or have completed the establishment of Urban Access Regulations Schemes in order to improve air quality, urban accessibility and reduce congestion, and/or to foster the development of alternative transport modes and the use of cleaner and more energy-efficient vehicles.

The 2011 Transport White Paper announced the European Commission’s intention to tackle this issue by providing an EU-level framework for urban road user charging and Access Regulations Schemes and their applications, including a legal and validated operational and technical framework covering vehicle and infrastructure applications. This framework would seek to address the modalities for the development of Access Regulations Schemes. Authorities at the local level would retain their authority to decide on the appropriateness of an Access Regulations Scheme and to delimit the area under the scheme, to fix the amount of fees levied where a charging scheme is used, etc.

An online public consultation was conducted on "The urban dimension of EU transport policy" from 17 September to 17 December 2012. A vast majority of respondents (71%) think that EU support would contribute to more harmonious development of access regulations and urban pricing schemes at the local level. The most sought-after EU support in relation to access regulations schemes is the development and exchange of information and best practices, development of voluntary guidelines and recommendations, mandatory criteria and interoperability standards for equipment.

On 22 September 2014, following the inter-institutional negotiations, the European Parliament and the Council adopted the Directive on the deployment of alternative fuels infrastructure (Directive 2014/94/EU). The cornerstones of the Directive are the following:

- requiring Member States to develop national policy frameworks for the market development of alternative fuels and their infrastructure;
- foreseeing the use of common technical specifications for recharging and refuelling stations;
- paving the way for setting up appropriate consumer information on alternative fuels, including a clear and sound price comparison methodology.

Furthermore, the proposition advanced in the 2013 EC Communication “Together towards competitive and resource-efficient urban mobility” states that smarter urban access regulations and road user charging require “non-binding guidelines” that “would allow cities and Member States to benefit from the experiences elsewhere, and, where appropriate, foster a more common approach to issues such as vehicle categories, road signs, information provision, enforcement, exemptions, and pricing. This would make it easier for
users to understand and comply with schemes, while leaving cities flexibility to adapt to their local circumstances.”

Finally, the 2013 Commission Staff Working Document “A call for smarter urban vehicle access regulations”, states that “the Expert Group on Urban Mobility should consider access regulations developments and assist with, for example, the elaboration of suitable best practice guides and non-binding guidance to help cities implement access regulations schemes effectively.”

In such a context, the European Commission provides indications and guidelines to deal more effectively with the design and implementation of UVARs schemes, in partnership with member States and other relevant stakeholders, in order to avoid fragmentation and ensure a seamless transport system.

International organisations (UNECE) have also contributed to setting the framework towards a common approach, for instance through the Convention on Road Signs and Signals (1968), which set out rules ensuring uniformity of road signs, signals and symbols, necessary in order to facilitate international road traffic and improving safety.

The following table summarises the main steps undertaken at EU/international level, in shaping the policy relevance and the policy framework concerning access regulations strategies and traffic regulation.

### UNECE Convention on Road Signs and Signals

The Convention set out in Vienna in 1968, established common rules ensuring uniformity of road signs, signals and symbols, necessary in order to facilitate international road traffic and improving safety. Following the opening for signature of the Vienna Convention on Road Signs and Signals, the Inland Transport Committee (ITC) of the Economic Commission for Europe, considering that it was necessary to achieve greater uniformity in the rules governing road signs and signals in Europe, asked the UNECE Group of Experts on Road Traffic Safety to prepare a draft Agreement supplementing the Vienna Convention. The final text of that Agreement was approved by the Inland Transport Committee on 1 May 1971 (see document E/ECE/812-E/ECE/TRANS/566) and was opened for signature the same day. The Agreement entered into force on 3 August 1979 and on 1 July 2007 it had twenty-nine Contracting Parties. This Agreement was supplemented on 1 March 1973 by a Protocol on Road Markings, which entered into force on 25 April 1985. This Protocol has twenty-four Contracting Parties, at the date of 1 July 2007.

### Urban Mobility Package

The section on smarter urban access regulations and road user charging within the Urban Mobility Package describes the role of urban vehicle access regulations in helping optimize urban access, air quality and to contribute to the goal of phasing out conventionally fuelled vehicles in cities by 2050.

In such a context, the European Commission has envisaged the need to exchange information among Member States and experts on urban access regulations across the Union, including practical implementation, conceptual foundations, effectiveness and impacts. This will lead to non-binding guidance to help cities implement access regulation schemes effectively.

### Transport White Paper

The 2011 Roadmap to a Single European Transport Area – Towards a competitive and resource efficient transport system commits in its action 32 – an EU framework for urban road user charging to develop a validated framework for urban road user charging and access regulation
schemes and their applications, including a legal and validated operational and technical framework covering vehicle and infrastructure applications.

**Greening Transport Package**

The EU has made internalisation of external costs of transport one of its main principles in transport policy. In 2008, the EC Greening Transport Package (COM/2008/0433), included a strategy for the internalisation of external costs (COM/2008/0435). With regards to urban pricing schemes, the latter document refers directly the Action Plan on Urban Mobility (COM/2009/490).

**Action Plan on Urban Mobility**

The Action Plan on Urban Mobility’s (APUM). Action 7 - access to Green Zones; Action 12 - Study on urban aspects of the internalisation of external costs and Action 13 — Information exchange on urban pricing schemes – relate directly to this measure.

### Scope of the study

Against this background, the European Commission – DG MOVE has contracted a study to deliver six non-binding guidance documents (NBGD) on different aspects of access regulations, from design to successful implementation. The goal of the set of NBGDs is to support local authorities planning to introduce an access regulations scheme with practical guidance and recommendations. This is based on previous and current studies and assessments of existing schemes on six aspects of UVARs, from planning to successful implementation:

<table>
<thead>
<tr>
<th>Topic of the NBGDs</th>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Information and communication</td>
<td>To inform stakeholders about the scheme’s characteristics and functionalities throughout the process of establishing and running a UVAR, and devise and implement effective communication plans, aiming to make users (including foreigners) able to understand the terms and conditions of the scheme, including fines and enforcement options, and establish an interaction with local authorities.</td>
</tr>
<tr>
<td>2. Enforcement (including cross-border), vehicle types, their identification and exemptions</td>
<td>To inform stakeholders, using best practices and examples, of the benefits of efficient vehicle identification methods, (including common standards for retrofitted vehicles) exemptions and enforcement rules, also in relation to national legislation. The situation at cross-border points and treatment of foreign vehicles is considered as well.</td>
</tr>
<tr>
<td>3. Planning, consultation and design (including definitions and typologies)</td>
<td>To provide information to stakeholders about the UVARs planning, consultation and design cycle. Dialogue with stakeholders, design and inclusions of ancillary transport policies, e.g. parking management and pedestrianisation, are considered.</td>
</tr>
<tr>
<td>Topic of the NBGDs</td>
<td>Rationale</td>
</tr>
<tr>
<td>-------------------</td>
<td>-----------</td>
</tr>
<tr>
<td>4. National legal frameworks</td>
<td>To inform stakeholders about the requirements for an efficient and supportive national framework in relation to national and sub-national legislation for UVARs implementation.</td>
</tr>
<tr>
<td>5. Evaluation and assessment</td>
<td>To provide information to stakeholders on state-of-the-art techniques and practices for the evaluation and assessment of UVARs schemes. Information on the range of impacts, techniques, barriers and processes is collected, organised and shared, and is ideally drawn from best practices.</td>
</tr>
<tr>
<td>6. Technology options and interoperability</td>
<td>To inform stakeholders of the benefits and shortcomings of the available technology options, and of the potential benefits deriving from interoperability and, in general, from the adoption of common approaches.</td>
</tr>
</tbody>
</table>

While there is obviously no one-size-fits-all approach, commonly applicable solutions to shared challenges and concerns can be found for all of these relevant aspects, which can lead to a European rapprochement of practices for the benefit of cities, citizens and stakeholders across Europe, including business and industry.
The key topics which are presented in the six publications are strongly interrelated and should be seen in their global and dynamic interdependence:

This document is primarily intended for use by public authorities, such as municipalities or local agencies, responsible for the management of the traffic, transport and transport infrastructures within urban areas.

All guidance documents will be available online on the European Commission’s website once the project will be concluded.
The role of vehicle identification, exemptions and enforcement in UVARs schemes

The topic ‘Vehicle types, exemptions and (cross-border) enforcement of successful UVAR schemes across Europe’ addresses three different but intertwined and important aspects of UVAR implementation: the choice of technologies for vehicle detection, the adoption of enforcement systems and the rules regarding exemptions.

The primary objective of urban vehicle access regulations (UVARs) schemes is to regulate the access of certain vehicles (e.g. cars, delivery vehicles and buses) to specific areas, an objective often driven by air quality targets but also by other political and long-term objectives such as reducing congestion, increasing the overall liveability of cities, etc.

In this context, vehicle identification, rules of exemptions and enforcement methods play a fundamental role.

**Vehicle identification**

Vehicle identification can be carried out through the use of information and communication technologies, e.g. camera systems and Automatic Number Plate Recognition systems (ANPR) or through manual inspections. For the former, the identification of vehicles relies on a search for the recognized plate into an online database of released permits, either static (permits released on a permanent basis) or dynamic (requested permits). Other technological options, such as those based on dedicated short-range communications, or DSRC (this frequency has already been standardized at 5.8 GHz) between an on-board unit and a transceiver at the access points, are available, even if mainly on an experimental basis. Whatever the identification method, vehicle emission standards based on Euro standards represent an important criterion for traffic regulation.

**Exemptions**

A key issue for UVAR implementation is the clear definition of exempted vehicles. Every scheme is in fact likely to entail exemptions under specific circumstances, such as ambulances, vehicles driven by or for handicapped persons etc. Therefore, it is essential to have unambiguous, reliable vehicle identification and exemption rules that should be similar across Europe in order to allow smooth cross-border travel for citizens and business.

**Enforcement**

Related to vehicle identification is the choice of enforcement techniques; for example, manual, in the case of sticker-based systems, or automatic, relying on databases containing all of the permits issued to allow entrance to authorized vehicles. Databases can be managed at the local level, e.g. for exemptions, or at the regional-central level, e.g. emission standards. The treatment of foreign vehicles in the case of automatic enforcement may be problematic, due to the lack of relevant information, such as emission standards, in the national database. Making enforcement effective is fundamental for both scheme managers and users, as weak/ineffective enforcement will lead to the failure of even the best conceived scheme.
Description of the process

Each of the six identified NBGDs is the result of a participatory process, entailing the following activities:

• Clearly identifying the problem to be solved and the benefits of a more common approach across the EU.
• Defining the scope of the NBGDs and target audiences.
• Bringing together relevant background material (research papers, best practices and experiences).
• Convening a small, balanced group of technical experts to review the available material and prepare drafts of the NBGDs.
• Consulting a broad range of interested stakeholders on the draft NBGDs.
• Presenting the draft NBGDs to interested audiences.
• Revising the NBGDs as appropriate, based on the comments and feedback received.

Up-to-date literature review

A literature review has been carried out in order to set up a knowledge base consisting of research, EU and national guidance, best practices, technical reports, articles and conference proceedings on UVARs. This activity served as a reference to draft the NBGDs.

Sources can be divided into three key categories:

1. Information at the urban level. This source accounts for the most significant share of available information. It includes i) the CIVITAS initiative knowledge centre, which reports access regulations feasibility and evaluation cases from the municipalities involved in the CIVITAS projects, ii) databases such as ELTIS, the urban mobility observatory, containing case studies dealing with pricing policies and access regulations measures, iii) academic literature on ex-post assessments of access regulations policies, iv) updates on the implementation of long-standing examples of access regulations policies in European cities, e.g. Milan, Rome, Bologna, London, Stockholm, Trondheim, Gothenburg etc.

2. Information at the urban and national level. The key reference for this is the website http://urbanaccessregulations.eu/, which provides an updated overview of the implementation of access regulations policies at the urban and national level (for most of the EU countries). In particular, when appropriate, the national level is addressed through the review of national legislation features, e.g. vehicle identification, enforcement practices, etc.

3. Information at the EU level. Academic papers and proceedings from research institutes provide comparisons on UVAR schemes.

The share of sources by key categories is shown in the following graph.
The methodology for literature review relies on the following assumptions:

- **Time horizon: 2011-2015.** The literature review begins with information from the Study on Urban Access Restrictions (ARS) carried out in 2010, which provides extensive information on access regulations schemes. Building on that, the literature review focuses on publications, reports and studies issued from 2010 onward, trying to offer a complete picture of relevant sources concerning UVAR implementation and design in Europe;

- **Qualitative evaluation.** Each source is graded on a qualitative scale from high to low, indicating the quality of its information on the topic of NBGDs. For each source the title, time horizon, urban area involved, and a brief description of contents and useful notes are provided, e.g. types of reports, feasibility studies, evaluation reports, etc.;

- **Cross-cutting interpretation.** Finally, a cross-cutting interpretation of each topic throughout the available literature has been made to find relevant sections and to address relevant topics.

Concerning vehicle identification, exemptions and enforcement, the literature review shows that the most relevant information is found in the assessment and evaluation reports of the cities involved in the CIVITAS projects, followed by websites with information about UVARs schemes across Europe and finally in information released by cities with long-standing experience in the implementation of UVARs schemes, e.g. London and Stockholm. The literature provides an analysis of case studies that have contributed to the identification of priority areas for the implementation of effective vehicle identification techniques; notably i) EURO emission standards ii) the uniform labelling of retrofitted cars, iii) the treatment of foreign vehicles and motorbikes.

Case studies involved in the evaluation and assessment reports of the CIVITAS projects, related
Vehicle Types, Exemptions and (Cross-border) Enforcement of Successful Urban Vehicle Access Regulations (UVARs) schemes across Europe

to both ongoing and ex-post UVARs schemes, provide an overview of criteria for vehicle identification, vehicle classification, exemptions and enforcement practices. Vehicle identification in the implementation of Low Emission Zones (LEZ) is generally based on ‘Euro standards’. These are European standards that define the limits for exhaust emissions for new vehicles circulating in EU member states. According to the literature review, the current situation concerning freight transport is characterized by UVAR schemes targeting both heavy duty and light trucks. Recently, powered two wheelers (PTWs) have also been addressed in UVAR schemes. Relevant information on enforcement and exemptions is also included in the websites reporting on the adoption of UVAR schemes in Europe, in particular the urban access regulation website14.

The complete list of literatures consulted is available in Annex I.

**Stakeholder involvement and contributions**

The involvement of relevant stakeholders in the discussion and validation of the NBGDs has proved to be of great importance. Each NBGD benefits from two types of stakeholder input:

a) The engagement of a balanced and representative group of experts providing direct contributions to the NBGDs according to their respective areas of expertise;

b) The involvement of a broader group of stakeholders for the circulation and validation of the contents of the NBGDs.

**Expert contributions**

A special list of experts has been compiled by the authors of this study. This is based on their direct expertise in the design, implementation and operation of access regulations schemes and systems as well as their broad and concrete experience with technologies adopted in the access control systems in a number of deployments across Europe.

The final list of selected experts is as follows:

- **Greg Archer**: leads the clean vehicles team at Transport & Environment
- **Steve Kearns**: Engagement Manager at Transport for London
- **Mike McDonald**: Emeritus Professor of Transport Engineering at the Transport Research Group of Southampton University
- **Fabio Nussio**: Head of International Cooperation at Roma Servizi per la Mobilità (Mobility Agency of the City of Rome)
- **Adriano Trapuzzano**: Ex-Solution Manager at BU Electronic Terrestrial Tolling of Kapsch TrafiCom AG
- **Terje Tretvik**: Senior Scientist at SINTEF Transport and Society, Transport Research

On 13 April 2015, a coordination meeting was held at the ISIS office in Rome, gathering both the experts and the research team, in order to share a common methodology and the main expected output of each NBGD.

The experts’ central contribution consisted in providing general feedback on the key challenges and available options identified by the research team on each NBGD topic. Once these were discussed and agreed on, they helped assess the potential impact of a common European
approach and helped identify the key factors leading to the successful implementation of the practices showcased.

In the case of the NBGD on vehicle identification, exemptions and enforcement, the allocation has been as follows:

- Greg Archer: Chapter IV on Potential impacts from a common European approach
- Adriano Trapuzzano: Chapter V on Barriers and enablers to a common European approach

**UVAR stakeholders**

At the outset of the study, a list of about 100 key stakeholders was compiled, comprising both cities and other relevant actors such as industry, institutions, economic players, citizen representatives, research institutes, and private consultancies (the list of stakeholders is available in Annex II).

The next figure shows the UVARs stakeholders in detail.

![Figure III -- Composition of UVARs Stakeholders](image)

Urban areas and transport associations (from public transport to passengers and freight) account for the biggest shares, followed by shopkeepers’ associations and representatives of Member State Ministries.

Furthermore, a key contributor has been the Advisory Group on Access Regulations of the CIVITAS CAPITAL project, which has provided recommendations for the NBGDs.
This UVAR stakeholders’ group has been consulted throughout the NBGD drafting process at different stages and in different ways, namely through:

1. The stakeholders’ workshop on Friday 25 September 2015 in Brussels
2. An online questionnaire launched in November 2015
3. Continuous consultation via email

Presentation to target audiences and feedback

Stakeholders workshop

The UVARs stakeholders’ group was invited to discuss the preliminary results of the first two NBGDs - Information and Communication and Vehicle identification, exemptions and enforcement – during a restricted workshop organised with the EC in Brussels on Friday 25 September 2015, at the Albert Borschette Conference Centre (the agenda is available in Annex III).

Car manufacturers, associations and city representatives took part in the workshop.

Overall, the discussion was particularly useful in clarifying and/or fine-tuning some of the concepts developed in the first draft of the NBGD presented to the audience. Amongst others, the following suggestions have been incorporated in the new draft of the publication:

- Reinforce the concept of a ‘European rapprochement of practices’.
- Focus on examples/case studies rather than merely best cases, since the perception of what a “best practice” is could be subject to the interpretation of the different stakeholders, which appear not to be aligned on the matter.
- The NBGD should provide “practical guidelines” to be used by the cities together with a set of recommendations for cities, without sending these to the EC as recommended standards.
- Contributions to a better definition of criteria for the identification of historical vehicles.
- The importance of stressing the relevance of the use of the Euro standard as a key criterion for vehicle identification, associated with the need to consider “real” data on emissions (actual driving conditions) in order to allow local policymakers to properly assess the effectiveness of the scheme in compliance with the regulated pollution values.

Stakeholders proved very active in debating and commenting on the topics presented, especially in the closing session, where the audience’s involvement in the highlighting of recommendations was particularly relevant.

The stakeholders’ point of view was taken into the highest consideration along with their contributions on case studies in the formulation of the NBGDs.

**Online questionnaire**

In November 2015, an online questionnaire was designed and distributed to the UVARs stakeholders’ group and was made available on the web (through the DG MOVE website). The questionnaire was aimed at collecting feedback on the second draft of the first two NBGDs, which had incorporated feedback received during the Brussels workshop on 25 September (the questionnaire is available in Annex IV).

The questionnaire was divided into four main sections:

1. **Stakeholder details**: this section collected information on the respondents, including type of organisation, geographical area, and contact details.
2. **Questions on the overall clarity, relevance, effectiveness and usefulness of both the NBGDs as a whole, as well as on their contents.**
3. **Specific questions on each chapter of the NBGDs.**
4. A section for additional remarks and suggestions.

In total, 18 stakeholders answered the questionnaire. Respondents’ categories are presented in Figure IV.

![Figure IV — Categories of respondents to the on-line consultation](image)

In terms of contributions to the NBGDs, most of the respondents (55%) consider the formulation of the recommendations to be satisfactory.

Apart from the recommendation to devote special attention to transport of goods in urban areas (urban deliveries), which is the object of a parallel ongoing study, the key suggestions for the improvement of the NBGDs were as follows:

- The NBGDs should also consider cars running on alternative fuels inside the UVAR, because of the intrinsic environmental benefits of alternative fuels.
- The NBGDs should avoid policy-related statements, as they do not lie within the work scope given that the objective is to analyse and outline good practices in terms of UVAR enforcement and not recommendations on environmental policies.

All remarks and comments received have been processed and taken into account in the preparation of the final version of the NBGD.

**Continuous consultation via email**

The research team has kept up a regular dialogue with the UVARs stakeholders’ group. Besides the invitation and participation in the workshop and the online consultation, stakeholders have been made aware of all new drafts of the publication produced. These drafts have been shared with all members of the group and accompanied by a call for additional input and comments, to
make sure that inputs collected were addressed. A number of individual emails were received that provided either additional open comments or remarks, or directly tracked changes to the text.
Summary conclusions and recommendations

The stakeholders have been active in debating and commenting on the first drafts of the NBGD, helping to make the topics more focused and setting priorities.

The issues raised by the stakeholders, i.e. through feedback provided in the online questionnaire, the discussions held during the September 2015 stakeholder meeting and the various comments on the expert contributions, can be separated into the following topics (from several groups of stakeholders):

Industry:
- Technology-neutrality: It has been stressed that any technology preference in the implementation of UVAR schemes must be avoided in order to leave the decision on future technology solutions to industry and consumer preference.
- Euro standards: Euro standards should continue to reduce emissions with the support of real world driving condition tests. Following Euro standards (including a clear and possible common guidance for retrofitting at the EU level) in vehicle identification for the implementation of UVAR schemes, would avoid vehicle discrimination, e.g. new vehicles being compared to old ones. From the consumer point of view, this remains the most comprehensible approach. For the industry, following Euro standards would avoid a critical separation of standards (fleet-wide Euro standards vs. potential ultra-low emission standards for inner cities), without weakening the effects of the “economies of scale” on which the industry is dependent;

Environment NGOs:
- The gap between actual and Euro standard emissions on specific pollutants: Euro standards, that is, the maximum levels of pollution permitted from cars, vans and trucks, have been progressively tightened, notably for both particulate matter and nitrogen oxides, two of the air pollutants of greatest concern. Low Emission Zones therefore widely use Euro standards as the basis for restricting access to more polluting vehicles. However, actual road emissions, particularly from diesel vehicles, and with reference to specific pollutants, such as nitrogen dioxide, may be much higher than what is prescribed by Euro standards, e.g. Euro 5, making it necessary to reduce the gap between actual emissions and Euro standards through the introduction of Real Driving Emissions tests in Euro 6. Real world driving emissions factors should be used by cities to properly model the pollutant concentrations in the vehicle access regulation area and to decide which emission standards should be set.

Local Policymakers:
- The target audience of the NBGDs: the NBGDs should provide guidance to local governments for the implementation of effective UVAR schemes, formulating recommendations in the direction of a gradual European rapprochement of methodologies and strategies that would improve the effectiveness and efficiency of vehicle identification, exemptions and enforcement at the city level;

In conclusion, the main objective of the NBGD would be to present the rationale behind the definition of common approaches; to summarize the current situation and highlight (through concrete examples) the positive implications for both industry and users in taking inspiration from current best practices; and to identify priority areas for pursuing a common approach.

ANNEX III - Agenda of stakeholders’ workshop

DG MOVE: STAKEHOLDERS’ WORKSHOP
IN THE FRAMEWORK OF THE PREPARATION OF EU GUIDANCE DOCUMENTS ON URBAN VEHICLE ACCESS REGULATIONS

Friday 25 September 2015

Conference Centre Albert Borschette
Room 2D, Rue Froissart 36
1040 Brussels

AGENDA

10:00 - 10:15 Introduction to the purpose of the workshop and the project
Magda KOPCZYŃSKA, Director DG MOVE C

10:15-11:45 Presentation on the external study being conducted, the structure of the workshop and the expected outcomes; Presentation of main issues to be investigated under each topic and first findings

12:00 -13:30 Guided debate on the drafts, following the agenda set for each topic; background information on the drafts by the consultants and suggestions of the participants

13:00 - 14:00 Lunch break

14:00 - 15:30 Discussion on specific issues that have proven particularly difficult to solve and that will be of primary importance to the development of non-binding guidance documents

15:45 - 16:15 Discussion on which topics to examine further

16:15-16:45 Presentation of the first results of the parallel study on the preparation of six non-binding EU guidance documents on urban logistics

16:45 - 17:00 Summary and outlook
Daniela ROSCA, Head of Unit DG MOVE C.l
ANNEX IV – Online questionnaire

Stakeholder information

1. Please indicate the geographical area(s) where your organisation operates (more countries can be selected):

- Austria (1)
- Belgium (2)
- Bulgaria (3)
- Croatia (4)
- Cyprus (5)
- Czech Republic (6)
- Denmark (7)
- Estonia (8)
- Finland (9)
- France (10)
- Germany (11)
- Greece (12)
- Hungary (13)
- Ireland (14)
- Italy (15)
- Latvia (16)
- Lithuania (17)
- Luxembourg (18)
- Malta (19)
- Netherlands (20)
- Poland (21)
- Portugal (22)
- Romania (23)
- Slovakia (24)
- Slovenia (25)
- Spain (26)
- Sweden (27)
- United Kingdom (28)
2. Indicate which of the following category(ies) best define your organisation (more categories can be selected). In case your company/organisation may fall under more categories, please mind to ensure that your following responses are coherent with the boxes you select.

- Governmental agency (1)
- Member of the industry (2)
- MS institution (3)
- Citizen and citizen representative (4)
- Academic and research organisation (5)
- Private consultancy (6)
- Other (8)

3. Please use this space to further elaborate your previous answer, if deemed necessary _____ (1)

4. Please fill in with your contact details
   a. Company/organisation (1): _____
   b. Name (2): _____
   c. Surname (3): _____
   d. Position/Role within the organisation (4): _____
   e. City (5): _____
   f. Country (6): _____
   g. Telephone (7): _____
   h. Email address (8): _____

General questions

Clarity
5. Overall, on a scale from one to ten, how would you assess the **clarity (i)**\(^1\) of the NBGD (minimum: 1 – maximum: 10)?

_____ Level (1)

If the score is below 6, the following questions will be shown. Otherwise, question no 7 will appear.

6. Please indicate which section(s) you consider unclear and why. Also, please indicate how the clarity of the mentioned section(s) could be enhanced.

_____ (1)

Relevance
7. Overall, on a scale from one to ten, how would you assess the **relevance/importance (i)**\(^2\) of the contents of the NBGD (minimum: 1 – maximum: 10)?

_____ Level (1)

If the score is below 6, the following questions will be shown. Otherwise, question no 9 will appear.
8. Please indicate which section(s) you consider not-relevant/not-important and why. Also, please indicate – if appropriate – how these sections should be revised to increase their relevance/importance.

_____ (1)

Effectiveness

9. Overall, on a scale from one to ten, how would you assess the effectiveness (i) of the NBGD and of the available options presented (minimum: 1 – maximum: 10)?

_____ Level (1)

If the score is below 6, the following questions will be shown. Otherwise, question no 11 will appear.

10. Please indicate which section(s) you consider to be non-effective and why. Also, please indicate how these sections should be revised to increase their effectiveness.

_____ (1)

Usefulness

11. Overall, on a scale from one to ten, how would you assess the usefulness (i) of the NBGD and its contents (minimum: 1 – maximum: 10)?

_____ Level (1)

If the score is below 6, the following questions will be shown. Otherwise, question no 13 will appear.

12. Please indicate which section(s) you consider useless and why. Also, please indicate how these sections should be revised to increase their usefulness.

_____ (1)

Section specific questions

13. Are the challenges identified in the NBGD (Ch. II of the NBGD) addressed and described in a satisfactory way?

☑ Yes (1)
☑ No (2)

If not, how could the challenges be better addressed and described? Please specify (1)

_____
14. Are there any additional challenges, which you consider important to mention apart from the three types of challenges presented?

- Yes (1)
- No (2)

If yes, please specify (1) _____

15. Are the available options identified in the NBGD (Ch. III of the NBGD) presented and described in a satisfactory way?

- Yes (1)
- No (2)

If not, how could the available options be better presented and described? Please specify (1) _____

16. Are there any additional available options, which you consider important to mention?

- Yes (1)
- No (2)

If yes, please specify (1) _____

17. Are the potential impacts of a common European approach in vehicle types, exemption and enforcement identified in the NBGD (Ch. IV of the NBGD) presented and described in a satisfactory way?

- Yes (1)
- No (2)

If not, how could the potential impacts from a common European approach in vehicle types, exemption and enforcement be better presented and described? Please specify (1) _____

18. Are there any additional potential impacts from a common European approach in vehicle types, exemption and enforcement, which you consider important to mention?

- Yes (1)
- No (2)

If yes, please specify (1) _____

19. Are the barriers and enablers to a common approach identified in the NBGD (Ch. V of the NBGD) presented and described in a satisfactory way?

- Yes (1)
- No (2)

If not, how this section could improve? Please specify (1) _____

20. Are there any additional barriers and enablers, which you consider important to mention?

- Yes (1)
- No (2)

If yes, please specify (1) _____
21. Are the recommendations identified in the NBGD (Ch. VI of the NBGD) presented and described in a satisfactory way?

☐ Yes (1)
☐ No (2)

If not, how could the recommendations be better presented and described? Please specify (1) ______

22. Are there any additional recommendations, which you consider important to mention?

☐ Yes (1)
☐ No (2)

If yes, please specify (1) ______

Additional elements

23. Please use the space below to provide your opinion on any additional aspect you may wish to mention

(please specify) (1) ______

Please note that we may contact you should we have any questions related to the data provided.
In the questionnaire, a text box appears pointing the mouse on the word “clarity” with the following: Clarity in respect to the means and forms used to present the information.

In the questionnaire, a text box appears pointing the mouse on the word “relevance/importance” with the following: Relevance/importance of the contents of the NBGD in respect to the objectives, measures/actions and problems related to UVAR schemes.

In the questionnaire, a text box appears pointing the mouse on the word “effectiveness” with the following: Effectiveness of the contents of the NBGD in respect to the capacity of the NBGD of supporting the achievement of a desired result/expected outcome.

In the questionnaire, a text box appears pointing the mouse on the word “usefulness” with the following: Usefulness of the contents of the NBGD in respect to the objectives, measures/actions and problems related to UVAR schemes.
HOW TO OBTAIN EU PUBLICATIONS

Free publications:

- one copy:
  via EU Bookshop (http://bookshop.europa.eu);

- more than one copy or posters/maps:
  from the European Union’s representations (http://ec.europa.eu/represent_en.htm);
  from the delegations in non-EU countries (http://eeas.europa.eu/delegations/index_en.htm);
  by contacting the Europe Direct service (http://europa.eu/europedirect/index_en.htm) or
  calling 00 800 6 7 8 9 10 11 (freephone number from anywhere in the EU) (*).

(*) The information given is free, as are most calls (though some operators, phone boxes or hotels may charge
you).

Priced publications:

Priced subscriptions:

- via one of the sales agents of the Publications Office of the European Union
